

## Teaching Guide

Teaching Guide				
Identifying Data				2021/22
<b>Subject (*)</b>	Cellular Techniques	<b>Code</b>	610441001s	
<b>Study programme</b>	Máster Universitario en Bioloxía Molecular, Celular e Xenética (semipresencial)			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	First	Obligatory	6
<b>Language</b>	SpanishGalicianEnglish			
<b>Teaching method</b>	Hybrid			
<b>Prerequisites</b>				
<b>Department</b>	BioloxíaDepartamento profesorado máster			
<b>Coordinador</b>	Bernal Pita da Veiga, María de los Ángeles	<b>E-mail</b>	angeles.bernal@udc.es	
<b>Lecturers</b>	Bernal Pita da Veiga, María de los Ángeles Castro Castro, Antonio Manuel Folgueira Otero, Mónica Insua Pombo, Ana Maria López Armada, María José Rioboo Blanco, Carmen Yañez Sanchez, Julian	<b>E-mail</b>	angeles.bernal@udc.es antonio.castro@udc.es m.folgueira@udc.es ana.insua@udc.es  carmen.rioboo@udc.es julian.yanez@udc.es	
<b>Web</b>	campusvirtual.udc.gal/login/index.php			
<b>General description</b>	Experimental subject focused on microscopy (including image analysis), plant and animal cell culture, flow cytometry and cytogenetic techniques.			
<b>Contingency plan</b>	<p>In the event that circumstances limit or prevent the access to the facilities of the Faculty, a hybrid or nonattendance teaching method would be adopted, respectively, with the following specifications.</p> <ol style="list-style-type: none"> <li>1. Modifications in the contents. Contents would not be modified in any case.</li> <li>2. Methodologies <ul style="list-style-type: none"> <li>* Teaching methodologies that are maintained The methodologies described will be maintained in both modalities.</li> <li>* Teaching methodologies that change If necessary, synchronous means of communication (MSTeams, ...) will be used in teaching activities that involve face-to-face teaching method. Practical sessions in the laboratory will be adapted to the circumstances; if necessary, they will be replaced partial (in the hybrid model) or totally (in the non-attendance modality) by non-attendance activities (video viewing, case studies, data analysis and interpretation, ...)</li> </ul> </li> <li>3. Mechanisms for personalized attention to students. Personalized attention will be limited to telematic means (email, Moodle, MSTeams, ...)</li> <li>4. Modifications in the evaluation. Criteria and methodologies for evaluation will be maintained in both modalities. <ul style="list-style-type: none"> <li>* Evaluation observations: Assessments will be carried out electronically in both modalities</li> </ul> </li> <li>5. Modifications to the bibliography or webography. If necessary, complementary sources or means of free access would be provided.</li> </ol> <p>(ii) planned Adaptation in the centre for the cases in which it surpass the aforo of the classroom assigned for the matter: Attribution of two or more classrooms to the matter and impartición of the class through TEAMS for the students that was not in the classroom with the professor. In the case of the practical activities, the groups will unfold to adapt to the capacity of the laboratory.</p>			

### Study programme competences

Code	Study programme competences
A1	Skills of working in a sure way in the laboratories knowing operation handbooks and actions to avoid incidents of risk.
A2	Skills of using usual techniques and instruments in the cellular, biological and molecular research: that are able to use techniques and instruments as well as understanding potentials of their uses and applications.
A13	Skills to become a professional in health, pharmacy, veterinary, animal production, biotechnology or food sectors.
B3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions and to prepare reasoned reports on scientific and biotechnological questions
B4	Organization and work planning skills: that are able to manage the use of the time as well as available resources and to organize the work in the laboratory.
C1	Ability to express oneself correctly, both orally and in writing, in the official languages of the autonomous community
C3	Using ICT in working contexts and lifelong learning.
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.
C9	Ability to manage times and resources: developing plans, prioritizing activities, identifying critical points, establishing goals and accomplishing them.

Learning outcomes			
Learning outcomes	Study programme competences		
To understand the theoretical foundations on which microscopy (including image analysis), (plant and animal) cell culture, flow cytometry and cytogenetic techniques are based.	AR1		
	AR2		
To acquire basic skills in the management and use of instrumental and units required for the development of cellular techniques.	AR1		
	AR2		
	AR13		
To know the applications of the different cellular techniques.	AR2		
To design, plan and conduct experiments regarding the techniques learned.	AR1	BR3	
	AR2	BR4	
Adequate oral and written expression in the official languages			CC1
Using ICT in working contexts and lifelong learning			CC3
Ability to manage times and resources: developing plans, prioritizing activities, identifying critical points, establishing goals and accomplishing them			CC8
			CC9

Contents	
Topic	Sub-topic
Microscopy and image analysis	Fundamentals, techniques and applications of light and electron microscopy. Fluorescence and confocal scanning microscopy: advanced techniques and applications. Introduction to image processing and image analysis
Cellular cultures	Introduction to cell cultures. Types of cell cultures. Cell culture requirements. Quantification of cellular parameters. Contamination. Cytotoxicity. In vitro cultures of plant tissues. Callus. Cultivation of plant cells in suspension.
Flow cytometry	General principles and methods of cytometry. Sample preparation and standardization of analysis procedures. Functional analysis of cells.
Cytogenetic techniques	Chromosome preparation and karyotype. Conventional in situ hybridization. Advanced techniques of fluorescence in situ hybridization (FISH).

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Document analysis	A2	0	40	40
Laboratory practice	A1 A2 A13 B3 B4	28	42	70

Supervised projects	A2 B3 B4 C9 C8 C3 C1	0	19	19
Mixed objective/subjective test	A2 B3	2	15	17
Personalized attention		4	0	4
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Document analysis	This methodology involves watching videos of lectures, reading documents prepared by the lecturers and/or reading bibliographic documents on the theoretical-practical fundamentals and aspects related to the different techniques used in Cell Biology.
Laboratory practice	Practical sessions represent an indispensable part of the course, in which practical aspects and applications of the different cellular techniques will be approached. Practical sessions will be developed in concrete laboratories and places: laboratories of the Faculty of Sciences, Laboratories of Biomedical Research Institute (INIBIC), Scientific Research Support Services (SAI) of UDC. Students will develop laboratory protocols and attend demonstrations about the use of research units.
Supervised projects	Students must carry out works, resolve problems and/or questions about specific aspects of the techniques used.
Mixed objective/subjective test	It will consist of a written exam with questions-test and/or short answer questions about theoretical and practical contents and applications of the cellular techniques.

Personalized attention	
Methodologies	Description
Supervised projects Document analysis	Students (individually or in small groups) may consult their doubts about the contents and activities of the subject via phone and/or electronic support.  A forum on the Virtual Campus/Teams may be used for the formulation of doubts/comments.

Assessment			
Methodologies	Competencies	Description	Qualification
Supervised projects	A2 B3 B4 C9 C8 C3 C1	The ability to design (and plan) experiments, interpretate data and solve problems will be assessed.	30
Mixed objective/subjective test	A2 B3	The acquisition of knowledge about the theoretical foundations and applications, clarity of explanations, ability to integrate and link information handled and the ability to interpret data and solve problems will be taken into account.	50
Laboratory practice	A1 A2 A13 B3 B4	Attendance, skill in scheduled tasks and knowledge of the potential risks in laboratory practices will be assessed.	20

Assessment comments
<p>The mixed test will take place through the Virtual Campus on the dates and at the times set out in the timetable.</p> <p>In order to be evaluated, students must attend to practical sessions.</p> <p>In july there is the opportunity to retake only the tests. The january's score of supervised projects and practices are maintained.</p> <p>Preferably, first class honors will be awarded in january.</p> <p>The fraudulent realisation of the proofs or activities of evaluation, once checked, will involve directly the qualification of suspense "0" in the opportunity.</p>

### Program Green Campus

Empower of Sciences To help to achieve some sustainable immediate surroundings and fulfil with the point 6 of the Environmental Statement of the faculty of Sciences (2020), the documentary works that realise&nbsp; in this matter:to. They will request&nbsp; mostly in virtual format and computer supportb. To realise&nbsp; in paper:-they will not employ&nbsp; plastic-they will realise&nbsp; impressions to double expensive-they will employ&nbsp; paper recycled-they will avoid&nbsp; the realisation of draftsTo Environmental Statement is available in:[https://ciencias.udc.es/images/Facultade/Green\\_Campus/Regulamento\\_Comit%C3%A9\\_Green\\_Campus\\_FCiencias.pdf](https://ciencias.udc.es/images/Facultade/Green_Campus/Regulamento_Comit%C3%A9_Green_Campus_FCiencias.pdf)

(\*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
