General description	This subject has an approach eminently practical, whose main aim is to help students to develop the "analytical approach"				
	for solving diverse problems, selecting the most suitable analytical methodology in each case. Developments and trends in				
	the sample treatment and instrumental determination shall be considered; and its application for the determination of				
	priority and emerging pollutants in samples of environmental interest (air, water, soil, sediment, biological samples, food,				
	etc).				

Contingency plan

- (i) ADAPTATION TO BE CARRIED OUT IN THE EVENT OF NON-APPEARANCE due to outbreaks of disease.
- 1. Modifications to the content

No changes will be made

2. Methodologies

*Teaching methodologies that are kept.

Seminars, supervised works, mixed test, personalized attention.

*Teaching methodologies that are modified.

Laboratory practices: if it is not possible to do them in person at the Faculty, they will be replaced by the resolution of a practical case presented by the professor to groups of students who will have to submit a report.

- 3. Mechanisms for personalised attention to students
- Email: Daily. Used to make queries, request a virtual meeting to resolve doubts and follow up the case study and supervised work.
- Moodle: Daily. According to the needs of the students. It has "thematic forums" to formulate the necessary consultations.
- Teams: 1 session per week of the large group for the advancement of the theoretical contents and the seminars, in the time slot assigned to the subject. From 1 to 2 weekly sessions (according to the students' needs) in small groups (< 6 people), for the follow-up and support of the study and programmed activities related to the seminars, tutored works and practical cases.
- 4. Modifications in the evaluation
- The resolution of a case study replaces laboratory practices with the same percentage of qualification. The methodological suitability, the approach, detail and clarity in the reports, as well as the final critical discussion of the report will be assessed according to the problem to be solved.
- *Evaluation observations:
- The rest of the methodologies of the teaching guide are maintained, except that the mixed test and defence/exhibition of tutored works will be carried out in a virtual or telematic way (via Moodle and/or Teams), both at the first and second opportunity.
- 5. Modifications to the bibliography or webgraphy

No changes will be made. All the subjects are already available in Moodle.

(ii) ADAPTATION PROVIDED AT THE CENTER FOR CASES WHEN THE CLASSROOM CAPACITY ASSIGNED FOR THE SUBJECT IS EXCEEDEDED: additional spaces will be reserved in which students will be able to follow the activities through the Teams platform. In the case of practical activities, the groups will be divided to adapt them to the capacity of the laboratory.

	Study programme competences	
Code	Study programme competences	
A1	Coñecemento das realidades interdisciplinares da Química e do Medio Ambiente, dos temas punteiros nestas disciplinas e das	
	perspectivas de futuro.	

А3	Capacitar ao alumno para o desenvolvemento dun traballo de investigación nun campo da Química ou do Medio Ambiente, incluíndo os
	procesos de caracterización de materiais, o estudo das súas propiedades fisicoquímicas e biolóxicas e dos procesos que poden sufrir no
	medio natural.
A10	Relacionar a presenza de especies químicas no medio natural cos conceptos de toxicidade e biodisponibilidade.
A21	Comprender os fundamentos dos procesos de calidade e o modo de xestionalos.
A22	Dominar as técnicas instrumentais de análises máis típicas no ámbito químico profesional.
B1	Posuír e comprender coñecementos que acheguen unha base ou oportunidade de ser orixinais no desenvolvemento e/ou aplicación de
	ideas, a miúdo nun contexto de investigación.
B2	Que os estudantes saiban aplicar os coñecementos adquiridos e a súa capacidade de resolución de problemas en contornas novas ou
	pouco coñecidos dentro de contextos máis amplos (ou multidisciplinares) relacionados coa súa área de estudo.
В3	Que os estudantes sexan capaces de integrar coñecementos e enfrontarse á complexidade de formular xuízos a partir dunha información
	que, sendo incompleta ou limitada, inclúa reflexións sobre as responsabilidades sociais e éticas vinculadas á aplicación dos seus
	coñecementos e suizos.
B5	Que os estudantes posúan as habilidades de aprendizaxe que lles permitan continuar estudando dun modo que haberá de ser en gran
	medida autodirixido ou autónomo.
В6	Ser capaz de analizar datos e situacións, xestionar a información dispoñible e sintetizala, todo iso a un nivel especializado.
В7	Ser capaz de planificar adecuadamente desenvolvementos experimentais, a un nivel especializado.
C1	Ser capaz de traballar en equipos, especialmente nos interdisciplinares e internacionais.
C2	Ser capaz de manter un pensamento crítico dentro dun compromiso ético e no marco da cultura da calidade.
C3	Ser capaz de adaptarse a situacións novas, mostrando creatividade, iniciativa, espírito emprendedor e capacidade de liderado.
C9	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.
C11	Valorar a importancia que ten a investigación, a innovación e o desenvolvemento tecnolóxico no avance socioeconómico e cultural da
	sociedade.

Contents	
Topic	Sub-topic Sub-topic

Chapter 1 ANALYTICAL PROBLEM	Defining the problem and designing the analytical method. Classification of
	methodology and selection criteria. Development of an analytical method.
	Performance characteristics of analytical method. Method Validation. Sustainable
	Analytical Chemistry.
Chapter 2 SAMPLING	Sampling methodology. Representative sample. Sampling strategies and sampling
	plan. Passive sampling. Automatic sampling.
Chapter 3 SAMPLE PREPARATION	Recent advances in sample preparation techniques. Green sample treatments.
	Microextraction techniques. New extractants materials. Automated systems.
	Miniaturization of the sample preparation systems.
Chapter 4 INSTRUMENTAL METHODS OF ANALYSIS	Current trends in spectroscopic and chromatographic methods. Hyphenated
	techniques.
Chapter 5 CHEMICAL SPECIATION	Importance of chemical speciation in environment. Speciation methodology. Analytical
	challenges. Methods of analysis and applications.
Chapter 6 ENVIRONMENTAL APPLICATIONS	Contaminants in environment. Air quality analysis. Water analysis. Analysis of soil and
	sediment. Analysis of biological samples. Food analysis and food safety

	Methodologies
Methodologies	Description
Guest lecture /	Teacher explains the fundamental concepts and the most important contents of each subject. It also proposes different issues
keynote speech	that should be discussed and resolved by the students, encouraging participation
Laboratory practice	In the lab sessions the student will perform the application of theoretical concepts studied throughout the course and will also
	acquire the practical skills on techniques under study. The student will make a brief report on the obtained results
Seminar	Seminars clarify and extend some aspects covered in lectures and laboratory practice, especially related to the practical
	application of the studied methodologies. Students participate and discuss possible strategies to solve industrial and
	environmental problems under the teacher guidance
Supervised projects	Supervised projects will include finding information from different sources, presentation and oral defense of a topic proposed by the teacher related to any environmental, industrial, etc problem
Mixed	A final exam will be done to assess the degree of learning both the theoretical and practical
objective/subjective	
test	

Personalized attention	
Methodologies	Description

Seminar	Throughout the course the teacher resolves any doubts on the subject that the student needs.
Supervised projects	In seminars and supervised projects, the teacher supervises the methodology used to solve the proposed problems, solves
	the student's doubts and guides the learning process
	Students with recognition of part-time dedication and academic assistance waiver regime will be treated in tutoring (by
	appointment)

Assessment			
Methodologies	Competencies	Description	Qualification
Guest lecture /	A1 A3 A10 A21 A22	Attendance at master classes and active participation will be evaluated	5

Mixed	A3 A10 A21 A22 B2	Learning degree for the course contents and skill acquisition by students will be	30
objective/subjective		assessed through an objective test. It will consist of theoretical questions and applied	
test		problems	

Assessment comments

To pass the subject, students must regulary atendance to all available lessons and to attain a minimun cualification in each of them. The student will obtain the qualification of not submitted when he/she don't make the supervised project and not presented to the mixed test. As regards the successive academic years, the teaching-learning process, including continuous assessment, refers to an academic course and, therefore, would comezar a new course, including all activities and procedures the Assessment that is scheduled for that course.

For students with part-time dedication and academic assistance waiver regime. in the event that the student can not perform all activities or continuous assessment tests, the teacher take appropriate measures to avoid prejudicing their qualification.

In the evaluation of the subject, all that is established in article

14, regarding the Fraud Commission and disciplinary responsibilities, of the UDC's Rules for the Evaluation of Bachelor's Degrees and Master's Degrees will be applied.

Recommendations

Subjects that it is recommended to have taken before

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Other comments

GREEN CAMPUS PROGRAM RECOMMENDATION: in order to help achieve an immediate sustainable environment and comply with point 6 of

the "Environmental Declaration of the Faculty of Science (2020)", the

documentary works requested in this subject:(a) Will be requested mostly in virtual format and computer support.(b)

If paper is used: -No plastics will be used -Double-sided printing will

be used -Recycled paper will be used -The use of drafts will be

avoided.
