Study programme	Mestrado Universitario en Investigación Química e Química Industrial (Plan 2020)					
		Descriptors				
Cycle	Period	Period Year Type Cre				
Official Master's Degree	e 1st four-month period	First		Obligatory	3	
Language	SpanishGalicianEnglish					
Teaching method	Face-to-face					
Prerequisites						
Department	Química					
Coordinador	Rodriguez Gonzalez, Jaime		E-mail	jaime.rodriguez	@udc.es	
Lecturers	Rodriguez Gonzalez, Jaime		E-mail	jaime.rodriguez	@udc.es	
	Sanchez Andujar, Manuel			m.andujar@udc	.es	
Web	http://www.usc.es/gl/centros/quimic	ca/curso/master.html				
General description	This module is focused in the advanced aspects which are essential in subjects at highest level in Chemistry. Discussions					
	will be focused in the most important tasks in the basic chemical research directed to own or interdisciplinary studies. The					
	five main subjects in the module will be extended in 15 ECTS and they will be intensively given by the three associated					
	universities during the first quarter.					
	These subjects will be simultaneou	isly taught by the thre	ee universitie	s during the months	of September and October of ea	
	academic year.					
Contingency plan	1. Modifications to the contents					
	There's not modifications					
	2. Methodologies					
	*Teaching methodologies that are maintained. None					
	*Teaching methodologies that are modified. All by teams.					
	3. Mechanisms for personalized attention to students. By teams and e.mail.					
	4. Modifications in the evaluation					
	4. Modifications in the evaluation					

	Study programme competences / results
Code	Study programme competences / results
A1	Define concepts, principles, theories and specialized facts of different areas of chemistry.
A2	Suggest alternatives for solving complex chemical problems related to the different areas of chemistry.
A3	Innovate in the methods of synthesis and chemical analysis related to the different areas of chemistry
A7	Operate with advanced instrumentation for chemical analysis and structural determination.
A8	Analyze and use the data obtained independently in complex laboratory experiments and relating them with the chemical, physical or
	biological appropriate techniques, including the use of primary literature sources
A9	Promote innovation and entrepreneurship in the chemical industry and in research.
B1	Possess knowledge and understanding to provide a basis or opportunity for originality in developing and / or applying ideas, often within a
	research context
B2	Students should apply their knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary)
	contexts related to their field of study.
B4	Students should be able to communicate their conclusions, and the knowledge and the reasons that support them to specialists and
	non-specialists in a clear and unambiguous manner

B5	Students must possess learning skills to allow them to continue studying in a way that will have to be largely self-directed or autonomous.
B7	Identify information from scientific literature by using appropriate channels and integrate such information to raise and contextualize a
	research topic
B10	Use of scientific terminology in English to explain the experimental results in the context of the chemical profession
B11	Apply correctly the new technologies to gather and organize the information to solve problems in the professional activity.
C1	CT1 - Elaborar, escribir e defender publicamente informes de carácter científico e técnico
C2	CT2 - Traballar en equipo e adaptarse a equipos multidisciplinares.
C3	CT3 - Traballar con autonomía e eficiencia na práctica diaria da investigación ou da actividade profesional.
C4	CT4 - Apreciar o valor da calidade e mellora continua, actuando con rigor, responsabilidade e ética profesional.

Learning outcomes			
Learning outcomes	Study	/ progra	mme
	con	npetenc	es /
		results	
Be able to propose a molecular structure of both organic and inorganic Compostos by using spectroscopic techniques or mass	AC1	BC1	CC1
spectrometry techniques.	AC2	BC2	CC2
	AC3	BC4	CC3
	AC7	BC5	CC4
	AC8	BC10	
	AC9	BC11	
Be able to identify in a mass spectrum the base peak, molecular ion (main peak and isotope peaks) and some peak	AC8	BC1	
fragmentations.		BC2	
Be able to identify acronyms in the different ionization techniques.		BC4	
Be able to manually determine isotopic compositions of molecules using isotopomers and isotopologues.		BC7	
Be able to identify common elements such S, CI, Br based on isotopic patterns.			
Be able to estimate the maximum number of carbons based on the M+1 peak			
Be able to get possible molecular formulaes for a given mass using de rule of 13.			
Be able to use the nitrogen rule in the number of possible formulas.			
Be able to determine the degree of unsaturation from an empirical formula (DBE)			
Be able to interpret NMR magnetization through pulse sequences.			
Be able to interpret basic concepts as relaxation processes in NMR.			
Be able to describe or outline basic experiment by NMR pulses and NMR acquisition parameters (SI, O1, SW, AQ, DW,			
FIDRES, P1, D1).			
Be able to interpret type of NMR data such absorption and dispersion.			
Be able to distinguish NMR in time scale (FID) and NMR frequency scale (NMR spectrum) and to describe the Fourier			
Transformation in NMR.			
Be able to describe the basic work-up of two-dimensional NMR experiments.			
Be able to identify molecular fragments by using an heteronuclear experiments (HSQC / HMQC). Use of the DEPT-135 Edited			
HSQC experiment.			
Be able to gather information from NOE experiments.			
Use of essential difractometric techniques for a X-RAy single crystal experiments in the structural determination of small			
molecules.			

Contents		
Topic Sub-topic		
1. The mass spectrometry	Basic principles. Ionization methods: ESI, APCI, MALDI Isotopic patterns	
	High resolution mass spectrometry.	
	Fragmentation in mass spectrometry	

2. Monodimensional NMR experiments.	Selective irradiation experiments, 1D-NOE and 1D-TOCSY. Edited heteronuclear
Heteronuclear NMR spectroscopy.	experiments: INEPT and DEPT. Aplications in stereochemistry problems
	Other nuclei: N-15 and F-19 NMR
3. Bidimensional NMR experiments.	Heteronuclear correlation experiments. HSQC and HMBC
	2D-NMR experiments: COSY basic principles; TOCSY
	NOE experiments. NOESY and ROESY
	Heteronuclear 2D-experiments
4 Monocrystal X-Ray difraction	Basic concepts.
	Resolution methods and refinament of the structural models: examples.
	Criterios de calidad del modelo.
	Computional tools for calculation and representation for structures.

	Methodologies
Methodologies	Description
Seminar	It is proposed to carry out 12 sessions of seminars-problems of small groups where the students will solve sets of proposed
	problems presented by the teacher in handouts. The students will have in advance the problem on the moodle platform, in that
	form student will individuially elaborate the answers before the classes. Seminars will be used also for the resolution of doubts
	theoretical explanations. Attendance is mandatory.
Supervised projects	This monitored activity will be directed in solving exercises, clarification of doubts about the theory or practice, readings or
	other proposed tasks, as well as presentations, discussions or comments made individually by students or in small groups. In
	many cases teachers will require from students writen answers in advance. Attendance at these classes is mandatory.
Mixed	Final test will contribute to the assessment of the level of knowledge and skills acquired by students.
objective/subjective	
test	
Guest lecture /	In these large group sessions the theoretical contents along with relevant illustrative examples are developed. The students
keynote speech	will have the material to be taught in advance, before conducting the activity. The active participation of students will be
	encouraged.

	Personalized attention		
Methodologies	Description		
Supervised projects	Students who have special difficulties with any aspects of the subjects, should contact the hours of tutoring with the teacher to		
Seminar	receive the necessary support.

objective/subjective		RX expliacadas nas clases presenciais.	
test			
Seminar	A2 A3 A7 A8 A9 B2	Resolution of problems, practical cases and presentations that will be delivered to the	25
	B4 B5 B7 B11 C1 C3	student previously. The explanations and examples explained in the class will be	
	C4	followed.	

## Assessment comments

The completion of the set of activities related to seminars and supervised projects by the students is fundamental to successfully overcome the subject. In the seminary classes we will mainly work on solving problems. The problems and the calendar of classes in which these problems will be solved will be available to the students in the virtual classroom of the subject. Students should try to solve them autonomously, delivering the solution in the virtual classroom in advance of the classes. Subsequently, the solutions will be analyzed in the classes. The seminars will also propose brief exercises to be solved at the moment, which will serve to focus on the topics discussed and which will be taken into account in the evaluation. It is recommended that students use the recommended bibliography. The faculty will advise the sections of each book that are most appropriate for each topic. In case of finding difficulties, students can raise their doubts both in the classes and in the tutorials.

Recommendations
Subjects that it is recommended to have taken before
Subjects that are recommended to be taken simultaneously
Subjects that continue the syllabus
Other comments
The accomplishment of the activities of the block a) evaluation is very important for the student to successfully overcome the Subject. In the seminar
classes you will mainly work on solving problems. The problems and the calendar in which these problems will be solved will be available to students
in the web site of the course (Moodle). Students should try to solve all problems autonomously, delivering the solution in the virtual classroom in
advance of classes. Solutions will be analyzed in the classes. Seminars will contain short exercises to be solve in the same class. Discussion and the
way to solve each problem will be taken into account in the final grade. Students are encouraged to follow the recommended literature for each
chapter. In case of difficulties, the students can raise their doubts in both classes and tutorials.

(\*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
