General description	This course includes a description	of the fundamental	s and main a	pplications of various ch	aracterization techniques related
	to Materials Science and which (in	n many cases) have	not been tau	ght in the Degree in Che	emistry. These contents are
	fundamental to address other optional subjects of the master and, in particular, module 5 - Nanochemistry and New				
	Materials.	Materials.			
	In addition, also includes a part of computational techniques in which will be used computer programs that allow the				
	visualization of molecules. These contents are essential for any chemist.				

## Contingency plan

1. Modifications in the contents.

In principle, the contents are maintained in their entirety. If necessary for reasons of force majeure, it will be possible to opt for a more general presentation, which in any case will cover all the most relevant aspects of the subject.

- 2. Methodologies
- \* Teaching methodologies that are maintained

The methodologies will be maintained, but will be carried out in "online mode", i.e. using the TIC tools available to the institution. In the case that part of the students cannot connect and follow the classes in real time, asynchronous methods will be used (e-mail, recordings of the exhibition sessions, more personalized tutorials...).

\* Teaching methodologies that change

Objective tests will be online tests that will be conducted using Moodle or equivalent tools, tracked by TEAMS.

3. Mechanisms of personalized attention to students.

Students will receive tutorials through the Teams platform or by corporate email.

4. Modifications in the evaluation.

If all students could continue with the non-presential teaching without difficulty, it will be evaluated in the same way as in the presential teaching.

Students who are unable to follow synchronous activities online will be assessed for equivalent activities performed asynchronously.

\* Evaluation observations:

None.

5. Modifications to the bibliography or webgraphy.

There are no changes in the bibliography / webgraphy.

Learning outcomes			
Learning outcomes	Study	y progra	ımme
	COI	mpetend	ces
The student will be able to use computer programs that allow him to visualize molecules.			
The student will understand the fundamentals of some basic techniques of solid state analysis.			
The student will be able to interpret the results of the most common techniques of characterization of solids.			
The student will be able to select the techniques of characterization of solids most appropriate for solving specific problems.			

	Contents
Topic	Sub-topic Sub-topic
Unit I.	Visualization of molecules.
Unit II.	Thermal analysis of materials: thermogravimetry (TGA), differential scanning
	calorimetry (DSC), differential thermal analysis (DTA), isothermal titration calorimetry
	(ITC).
Unit III.	Diffraction techniques: powder X-ray diffraction (PXRD).

Unit IV.	Modern Microscopic Techniques: Scanning Tunneling Microscopy (STM), Atomic	
	Force Microscopy (AFM).	
Unit V.	Spectroscopy for characterization of surfaces and interfaces: surface plasmon	
	resonance (SPR), Raman spectroscopy, X-ray photoelectron spectroscopy (XPS) and	
	Auger spectroscopy.	
Unit VI.	Characterization of colloidal dispersions: dynamic light scattering (DLS) and zeta	
	potential.

	Methodologies
Methodologies	Description
Guest lecture /	Interactive lectures by the teacher, with active participation of the students.
keynote speech	
Seminar	Seminars with master's or guest professors, from other institutions, as well as with experts in the field. They will be interactive sessions.
Supervised projects	Individual or small group tutoring.
ICT practicals	Practical classes in computer classrooms.
Problem solving	Solution to problems or development of short projects, proposed by the teacher, or by the student himself (if deemed appropriate).
Document analysis	Personal study based on the different sources of information.
Objective test	One or several tests for the verification of the acquisition of knowledge and acquisition of the skills and attitudes proposed for
	this subject.
Laboratory practice	Characterization of materials.

	Personalized attention
Methodologies	Description
Problem solving	Individual or group tutoring.
Objective test	

		Assessment	
Methodologies	Competencies	Description	Qualification
Seminar		LECTURES, SEMINARS, PROBLEM SOLVING: compute together	0

Problem solving		LECTURES, SEMINARS, PROBLEM SOLVING: compute together	45
Objective test		(55% of the overall rating)	55

## **Assessment comments**

## The evaluation

of this subject will be done through continuous assessment and the completion of a final exam, with access to the exam being subject to participation in at least 80% of the compulsory teaching activities (theoretical classes, seminars and tutorials).

The

teacher will verify the attendance to the classes according to the system of control officially established in the Center/University. Absences must be documented. Excused absences will count as attendance to teaching activities in order to attend the exam.
