Contents		
Topic	Sub-topic	
INTRODUCTION:	Concept and historical background of Cell Biology.	
	Organization levels and clasification of life.	
CELL MEMBRANE AND CELL SURFACE	Structure and organization of biological membranes.	
	Transport of molecules across the membrane.	
	The cell surface.	
	Cell adhesion and cellular junctions.	
CYTOSOL AND CYTOSKELETON	Cytosol.	
	Cytoskeleton.	
	Complex microtubular structures.	

SYNTHESIS, INTRACELLULAR TRAFFIC AND	Ribosomes
DEGRADATION OF MACROMOLECULES	The endoplasmic reticulum
	The Golgi complex
	Lisosomes
THE ENERGY CONVERSION	Mitohondria
	Plastids
	Microbodies
THE CELL NUCLEUS AND THE EUKARYOTIC GENOME	The cell nucleus
ORGANIZATION	Chromatin
	Chromosomes
THE CELL CYCLE	The cell cycle
	Mitosis and cytokinesis
	Meiosis
	The programmed cell death.
THE SOCIAL CONTEXT OF THE CELL	Cell communication and cell signaling
	Cancer
Practical lessons	- Fundamentals of light microscopy
	- Observation of bacteria and fungi
	- Observation of protozoans (Protista) and animal cells
	- Observation of plant cells
	- Cell Fractionation
	- Study of plant subcellular structures
	- Observation of chromosomes and mitosis
	- Staining and observation of blood cells
	- Fundamentals of electron microscopy

Methodologies		
Methodologies	Description	
Guest lecture /	50 minutes sessions about some of the contents of the program. For better exploitation, it is highly recommended that	
keynote speech	students have previously read on their own the fundamental aspects of these topics in the recommended texts and completed	
	the questionnaires concerning the topic. This section includes the acquisition of A1 skill.	

Directed discussion	This methodology will be developed in the sessions called "Review and Problems". In small groups of 10-15
	students, (1) theoretical and practical questions contained in a questionnaire solved by the students prior to the session will be
	discussed; (2) cases or current issues in cell biology and their implications could also be solved. Finally, the level of
	understanding of the topics covered will be evaluated individually with a short test or gamified activity. This activity exercises
	the skills B1, B4, B6, B11 and C1.
Laboratory practice	Some theoretical aspects related to the equipment and experimental methodologies and simple cytological techniques are
	acquired in the lab. Students should elaborate a memory including: the goal of each practical, protocols followed, results,
	drawings and interpretations of the observations in detail. Attendance at practicals is mandatory for evaluation. Circumstances
	that prevent attendance, must be notified/justified to the teachers in charge. In this section skills A4, A30, A31 are developed.
Mixed	This category includes both a partial liberatory exam and the final exam on the contents of the program worked in the
objective/subjective	theoretical and practical sessions of the subject
test	
Seminar	In small groups of 10-15 students, it will be worked on a scheduled topic. Previously students should prepare a summary (1-2
	pages) or glossary of terms on the topic and a copy will be handed at the end of the session. The session consists of sharing
	the information and discussing on the topic. With this activity, skills B1,B4, B6, B8 and B11 will be exercised.
Workbook	Two selected texts related to the introduction of the subject will be available to students at the begining of the course to
	perform a comprehensive reading.
Introductory activities	One session will be dedicated to presentation of the course, explaining its structure, activities, assessment criteria, etc also
	content in the teaching guide. Student can resolve any queries related.
Online discussion	A particular cell biology issue will be proposed in the on-line forum. Contribution and discussion will be expected from the
	students. In this section, skills B1, B4, B8, B11 will be exercised.

Personalized attention		
Methodologies	Description	
Seminar	Students are free to discuss any concerns raised from lectures, but also extensively in seminars and guided discussions. They	
Directed discussion	also have the chance to solve any questions in personalized tutoring sessions.	
Laboratory practice		

		Assessment		
Methodologies	Competencies /	Description	Qualification	
	Results			
Mixed	A1	On the official date, a final exam will be held about the contents of the program	60	
objective/subjective		worked on in the theory and practical sessions. At mid-term, there will also be a		
test		voluntary and liberating partial examination of the theoretical and practical contents		
		worked until then.		
Directed discussion	A1 B1 B4 B6 B9 B10	Either in the face-to-face session called "Review and Problems", or as	20	
	B11 B13	homework, the level of understanding of the topics covered in the session will be		
		individually assessed with a short test, analytical question or resolution of a related		
		theoretical case.		
Laboratory practice	A1 A4 A5 A11 A26	At the end of the laboratory period, it will be required to submit a report about the lab	20	
	A30 A31 B8 B13	work carried out and the answer of some questions. For evaluation, some of the lab		
		practicals and a few selected questions of the questionnaire associated will be		
		chosen.		

Assessment comments

Attendance at practical sessions is necessary for being allowed to take the exam.

The final exam of the first call (at the end of the 1st semester) will represent 60% of the final grade. The remaining 40% will be the practicals report and the results of the evaluable activities of the discussion sessions (20% and 20%, respectively). Anyone who has participated in the Practicals and 3 or more evaluable activities can not opt for the "No presentado". Additionally, knowing that during the course students begin exercising certain skills in some cases by themselves), active participation in seminars and guided discussions will be positively valued. In particular, the contributions to the seminar and the forum will be taken in consideration for the final grade.

Exceptionally, under justified reasons, students that could not take all the continuous assessment tests (part-time students, specific circumstances of learning or unexpected circumstances), appropriate alternative measures or activities will be taken not to affect the student evaluation the second call (July), as long as the practices have been carried out, only the result of the final exam will be taken into account for the final grade.

Fraudulent

performance of the tests or evaulation activities, once verified, will directly imply a failure grade "0" in the corresponding opportunity

Adaptation to University, with a new system of studying, can be a big effort for all students. Learning outcomes of the subject includes fundamental concepts, familiarity with laboratory work, elaborating practical lab notebooks (presented as a report), finding and processing information from different reliable sources, present and communicate cell biology information clearly. The term finishes very quickly, which means students need to adapt fast to the new system. If students do not adapt quickly enough to work and study independently, this could lead to failure to pass the subject. It is therefore very important that students work on the subject as the course progresses, not leaving it do the last minute before the exam. It is recommended as well to read or work on the topics before lectures and take appropriate notes during lessons, as well as to complete the questionnaires within the two days immediately after the class.
