

Teaching Guide

Teaching Guide				
Identifying Data			2021/22	
Subject (*)	Microbiology and Environmental Biotechnology	Code	610G02018	
Study programme	Grao en Bioloxía			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	Fourth	Optional	6
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Bioloxía			
Coordinador	Cid Blanco, Angeles	E-mail	angeles.cid@udc.es	
Lecturers	Cid Blanco, Angeles	E-mail	angeles.cid@udc.es	
Web				
General description	Understand the role that microorganisms develop in ecosystems, as a result of their metabolic capabilities and their patterns of behaviour. From this prior knowledge, an approach will be done of how these microbial capabilities can be used for the benefit of society.			
Contingency plan	<p>In the unlikely event of capacity problems in the spaces designated for in-person activities, additional spaces will be reserved in which students can follow the activities through the TEAMS platform. In the case of laboratory activities, the groups will be distributed to adapt to the capacity of the laboratory.</p> <p>In the case of unexpected non-attendance:</p> <p>1. Modifications to the contents</p> <p>None</p> <p>2. Methodologies</p> <p>*Teaching methodologies that are maintained</p> <p>Magisterial sessions, seminars, oral presentation and mixed test</p> <p>*Teaching methodologies that are modified</p> <p>All methodologies, except for laboratory practices, will become non-presential, and will be given telematically</p> <p>3. Mechanisms for personalized attention to students</p> <p>Email and the Moodle platform will be used asynchronously and without specific timing, except in the case of exams.</p> <p>The Teams platform will be used to deliver the master classes according to the calendar approved by the Faculty Board</p> <p>4. Modifications in the evaluation</p> <p>In the event that the laboratory practices are suspended, these will be replaced by the preparation of a technical report based on experimental data to be provided to the students</p> <p>*Evaluation observations:</p> <p>During the development of the subject, several short examinations are carried out. If the theoretical part is not passed in this way, the overall examination will be taken on the date scheduled for the July examination.</p> <p>If the attendance is suspended, the exams will be taken by Moodle and the presentations by Teams</p> <p>5. Modifications to the bibliography or webgraphy</p> <p>None</p>			

Study programme competences

Code	Study programme competences
A1	Recoñecer distintos niveis de organización nos sistemas vivos.
A2	Identificar organismos.
A4	Obter, manexar, conservar e observar espécimes.

A9	Identificar e utilizar bioindicadores.
A13	Realizar o illamento e cultivo de microorganismos e virus.
A14	Desenvolver e aplicar produtos e procesos de microorganismos.
A15	Deseñar e aplicar procesos biotecnolóxicos.
A26	Deseñar experimentos, obter información e interpretar os resultados.
A30	Manexar adecuadamente instrumentación científica.
A31	Desenvolverse con seguridade nun laboratorio.
B2	Resolver problemas de forma efectiva.
B3	Aplicar un pensamento crítico, lóxico e creativo.
B4	Traballar de forma autónoma con iniciativa.
B5	Traballar en colaboración.
B6	Organizar e planificar o traballo.
B7	Comunicarse de maneira efectiva nunha contorna de traballo.
B8	Sintetizar a información.
B9	Formarse unha opinión propia.
B10	Exercer a crítica científica.
B11	Debater en público.
B12	Adaptarse a novas situacións.

Learning outcomes			
Learning outcomes		Study programme competences	
Understand the role of microorganisms in natural environments and how their metabolic capacities are integrated into the ecosystem energy and material fluxes		A1	B2
		A2	B3
		A4	B4
		A13	B5
			B6
			B7
			B8
			B9
			B10
			B11
			B12
Apply the metabolic capacities of microorganisms and their interaction with other organisms (mainly animals and plants) to solve environmental problems and other socially relevant processes		A2	B2
		A4	B3
		A9	B4
		A13	B5
		A14	B6
		A15	B7
		A26	B8
		A30	B9
		A31	B10
			B11
			B12

Contents	
Topic	Sub-topic
INTRODUCTION TO THE SUBJECT	-Environmental Microbiology: an historical overview
MICROBIAL BEHAVIOUR	-Cellular behaviour and environment -Microbial cooperative behaviour

MICROBIAL METABOLISM AND BIOGEOCHEMICAL CYCLES	<ul style="list-style-type: none"> -Microbial activity in the carbon cycle -Microbial activity in the nitrogen and sulfur cycles -Microbial conversions of other chemical elements
MICROBIAL INTERACTIONS	<ul style="list-style-type: none"> -Interactions between microorganisms and plants -Non-pathogenic interactions between microorganisms and animals
BIODEGRADATION, RECYCLING AND ENVIRONMENTAL BIOTECHNOLOGY	<ul style="list-style-type: none"> -Extremophiles -Microbial biodeterioration -Water treatment, depuration and control -Urban solid waste treatment -Bioremediation -Microbiological control of pests

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A1	21	63	84
Seminar	B2 B3 B4 B5 B6 B7 B8 B9 B10 B12	5	25	30
Laboratory practice	A2 A4 A9 A13 A14 A15 A26 A30 A31 B4 B5 B7	14	7	21
Oral presentation	B3 B4 B6 B7 B8 B9 B10 B11	2	4	6
Mixed objective/subjective test	A1 B6 B7 B8	3	0	3
Personalized attention		6	0	6
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Exhibition by the teaching staff of the theoretical bases of the subject
Seminar	For small group classes in this subject, the PBL (Project Based Learning) methodology will be applied, in which we will work on theoretical-practical contents of the subject
Laboratory practice	Laboratory practices are mandatory attendance. In them will be addressed, from the experimental point of view, points in the session and keynote in the seminars.
Oral presentation	The students will elaborate an oral presentation (20 minutes) to expose to the classmates the results obtained in their work of type PBL. The guidelines for this presentation will be determined throughout the seminars of the subject. For these oral presentations, the last 2 hours dedicated to small groups in the academic calendar are reserved
Mixed objective/subjective test	Written test in which will value the degree of knowledge and understanding achieved by the student.

Personalized attention	
Methodologies	Description
Seminar Laboratory practice Oral presentation	During the development of the subject will be met the needs and the student queries related to the matter, providing the guidance and support that are needed, both in person and on-line. Within the personalized attention you can include mentoring requested by the student for the preparation of examinations, as well as the subsequent revision of the same, and the preparation of seminars and oral presentation provided for in the subject.

Assessment			
Methodologies	Competencies	Description	Qualification
Mixed objective/subjective test	A1 B6 B7 B8	An examination (or examinations) in writing is made to assess the level of knowledge achieved.	60
Guest lecture / keynote speech	A1	Computed on the mixed objective/subjective test	0
Seminar	B2 B3 B4 B5 B6 B7 B8 B9 B10 B12	The student will obligatorily carry out a project based on the reasoned critique of research works that endorse the work plan proposed to respond to the proposal made at the beginning of the seminars. Critical and synthesis skills will be valued	15
Laboratory practice	A2 A4 A9 A13 A14 A15 A26 A30 A31 B4 B5 B7	Laboratory practices must be carried out by the student in the fixed dates. Continuous evaluation and a final test will be done to assess the level of knowledge of the student.	15
Oral presentation	B3 B4 B6 B7 B8 B9 B10 B11	At the end of the seminars and in an obligatory way, the student will present in the classroom the results obtained in their searches about the proposal of the seminars. The fluency of the scientific language, the oral presentation and the answers to the questions posed at the end of the presentation will be valued.	10

Assessment comments
<p>Attendance is mandatory laboratory practices to be evaluated, as well as having delivered and / or filled in a timely manner the tasks identified as mandatory.</p> <p>To account for the final grade in the value obtained in sections of seminars, practical and oral presentation, the student must have passed the mixed test, corresponding to the theory of the subject.</p> <p>The students that not pass the course at the first choice, must overcome the unapproved part at the second chance.</p> <p>In the case of very exceptional circumstances and properly justified, the Professor could exempt total or partially to the student in that concur of any process of evaluation. This Student would have to subjected it a particular examination that will not leave doubts envelope his level of knowledge, competitions, skills and habilities.</p> <p>NO PRESENTADO" mark is obtained only when the student has not been submitted to the mixed test. Exceptionally, the teacher should take appropriate actions in order to not prejudice her/his evaluation in case a student is not able to take all the continuous evaluation examinations, for justified reasons (part-time students or specific learning and diversity support circumstances).</p> <p>If the number of "Matrículas de Honor" (Distinction Award) that can be granted in the first option, you will not be granted in the second chance even when the maximum score is reached. Fraudulent performance in the exams or evaluation activities will result directly in a mark of '0' for the subject at the corresponding opportunity.</p>

Recommendations

Subjects that it is recommended to have taken before

Biochemistry I/610G02011

Biochemistry II/610G02012

Microbiology/610G02015

Applied Microbiology and Microbiological Control/610G02016

Microbiology Techniques/610G02017

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Other comments

The student has access to teacher presentations via Moodle, being these presentations only a guide for the study but never will be the total content of the matter. Green Campus Science Faculty ProgrammeIn order to help achieve a sustainable environment and comply with point 6 of the "Declaración Ambiental da Facultade de Ciencias (2020)", the work carried out in this subject area will be documented:a. They will be mainly requested in virtual format and computer support.b. To be done on paper:- Plastics shall not be used.- Double-sided printing must be used. - Recycled paper must be used.- Drafts should be avoided.
