General description	The subject is in the first year of the Degree, and the only precedent that most students have is Biology knowledge taken				
	during Secondary Education.				
	Cell Biology is included in the Basic Training module, therefore it is framed in the first semester of the first year of the				
	Degree, in order to provide students with the basic knowledge and basic skills necessary for other subjects.				
	In Cell Biology, different aspects of cells are studied in an integrated way and not only the merely structural one.				

Contingency plan

1. Modifications to the contents

No changes are planned in the contents.

2. Methodologies

*Teaching methodologies that are maintained

The teaching methodologies described in this teaching guide will be maintained, but will be adapted to the online modality.

*Teaching methodologies that are modified

The methodology will be adapted to the telematic modality, carried out through Microsoft Teams. In addition, all the material to be used will be made available to students on the Moodle platform.

The laboratory practices will be adapted to the existing circumstances and, if necessary, will be replaced by non-contact activities (viewing of methodological videos, study of microscopy images, case studies, analysis and interpretation of data ...).

The tests or exams will be carried out through the Campus Virtual platform.

The doubts that are raised to the students will be dealt with electronically.

3. Mechanisms for personalized attention to students

Personalized attention will be limited to telematic means.

Campus Virtual: whenever it is required (according to the student's need or demand).

Microsoft Teams: whenever it is required (according to the student's need or demand).

E-mail: whenever required (at the request of the student body). Use to make inquiries, request virtual meetings to resolve doubts or other clarifications related to the matter.

4. Modifications in the evaluation

The evaluation system included in the teaching guide is maintained, although the tests will be carried out electronically through Campus Virtual.

*Evaluation observations: The evaluation criteria and the observations collected in the teaching guide are maintained.

5. Modifications to the bibliography or webgraphy

No modifications are foreseen. If necessary, supplementary means will be provided.

6. OBSERVATIONS ON THE CAPACITY OF THE CLASSROOMS AND LABORATORIES: in the event of capacity problems in the spaces designated for the realization of face-to-face activities, additional spaces will be reserved in which students can follow the activities through the TEAMS platform. In the case of practical activities, the groups will be divided to adapt to the capacity of the laboratory.

	Study programme competences
Code	Study programme competences
А3	CE3 - Reconocer y analizar problemas físicos, químicos, matemáticos, biológicos en el ámbito de la Nanociencia y Nanotecnología, así
	como plantear respuestas o trabajos adecuados para su resolución, incluyendo el uso de fuentes bibliográficas.
A6	CE6 - Manipular instrumentación y material propios de laboratorios para ensayos físicos, químicos y biológicos en el estudio y análisis de fenómenos en la nanoescala.
A7	CE7 - Interpretar los datos obtenidos mediante medidas experimentales y simulaciones, incluyendo el uso de herramientas informáticas, identificar su significado y relacionarlos con las teorías químicas, físicas o biológicas apropiadas.
A8	CE8 - Aplicar las normas generales de seguridad y funcionamiento de un laboratorio y las normativas específicas para la manipulación de la instrumentación y de los productos y nanomateriales.
В3	CB3 - Que los estudiantes tengan la capacidad de reunir e interpretar datos relevantes (normalmente dentro de su área de estudio) para emitir juicios que incluyan una reflexión sobre temas relevantes de índole social, científica o ética

B4	CB4 - Que los estudiantes puedan transmitir información, ideas, problemas y soluciones a un público tanto especializado como no
	especializado
B6	CG1 - Aprender a aprender
B8	CG3 - Aplicar un pensamiento crítico, lógico y creativo.
C3	CT3 - Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su
	profesión y para el aprendizaje a lo largo de su vida
C7	CT7 - Desarrollar la capacidad de trabajar en equipos interdisciplinares o transdisciplinares, para ofrecer propuestas que contribuyan a un
	desarrollo sostenible ambiental, económico, político y social.
C8	CT8 - Valorar la importancia que tiene la investigación, la innovación y el desarrollo tecnológico en el avance socioeconómico y cultural
	de la sociedad

	Contents
Topic	Sub-topic
Unit 1. Introduction.	Concept and historical background of Cell Biology.
	Organization levels and clasification of life.
	Acellular systems.
Unit 2. Molecular composition of the cell.	Carbohydrates.
	Lipids.
	Proteins Enzymes.
	Nucleic acids.
Unit 3. Cell membrane.	Structure and organization of biological membranes.
	Transport of molecules across the membrane.
Unit 4. The cell surface.	Extracellular matrix.
	Cell adhesion and cellular junctions.
Unit 5. Cytosol and cytoskeleton.	Cytosol.
	Cytoskeleton.
	Complex microtubular structures.

Unit 6. Cellular organelles I. Synthesis and degradation of	Ribosomes.
macromolecules.	Endoplasmic reticulum.
	Golgi complex.
	Lysosomes.
Unit 7. Cellular organelles II. Energy conversion	Mitochondria.
	Plastids.
	Peroxisomes.
Unit 8. The organization of cellular genomes.	The cell nucleus.
	Chromatin.
	Chromosomes.
Unit 9. The cell cycle.	The cell cycle
	Mitosis and cytokinesis
	Meiosis
	The programmed cell death.
Unit 10. Cell communication and cell signaling	Direct contact.
	Chemical messengers.
Unit 11. Cell differentiation and tissue organization.	Cell differentiation.
	Organization of cells into tissues.
	Animal tissues.
	Vegetable tissues.
PRACTICAL LESSONS (Laboratory practices)	- Recognition of carbohydrates, lipids, proteins and enzymes.
	- Study of fungi and protozoa (Protista).
	- Observation and study of animal cells.
	- Observation and study of plant cells.
	- Observation and study of plant subcellular structures.
	- Study of osmotic phenomena.
	- Study of cell division: mitosis.
	- Processing of samples for light microscopy.
	- Observation and study of plant and animal tissues.

Methodologies		
Methodologies Description		

Introductory activities	It consists of a presentation session of the subject where the different sections contained in the teaching guide are exposed
	and explained (competences, program-contents, planning, methodology, evaluation, bibliographic resources, etc.) and where
	the students can propose any doubt or question related to them.
	Both the teaching guide of the subject and the calendars and times of the course will be available on the Moodle platform and
	on the website of the Faculty of Sciences of the UDC.
Guest lecture /	50-minute face-to-face sessions on the basic content of the program. The teacher will explain the theoretical foundations of the
keynote speech	subject through drawings, diagrams or computer presentations (content that will be made available to students through the
	Moodle platform). The teacher will also solve the doubts and questions raised by the students. Likewise, in order to take full
	advantage of these, it is recommended that the students have previously reviewed the fundamental aspects of these topics in
	the recommended texts and completed the relative questionnaires regarding the same.
Laboratory practice	
	In laboratory practices, in addition to addressing some theoretical aspects related to experimental methodologies, the manual
	skills typical of simple Cell Biology techniques are acquired. The student must make a report detailing the objective of each
	practice, the protocol followed and the results. In addition, you must describe, draw and interpret the observations made. This
	memory will represent 20% of the final grade for the course. Attendance at practices is a necessary condition to be evaluated.
	In the event of circumstances that prevent attendance, these must be communicated in advance to the teacher in charge or
	duly justified. During these sessions, the teacher will present the objectives of the practice and guide the observations of the
	students, clarifying the doubts that arise.
Objective test	2 of the sessions in small groups will be devoted to conducting objective tests, in order to know the degree of assimilation of
	the content taught. The activities delivered will be resolved in small groups, assuming the same 10% of the final grade.
Mixed	This category includes both the partial / learning controls that will be carried out throughout the course, as well as the final
objective/subjective	exam on the theoretical and practical contents of the subject, all of them with test-type and / or short-answer questions (or
test	relatively short) on the contents of the master classes and sessions in small groups. In this way, it will be possible to know the
	way in which the students are assimilating the contents and improve the processes in progress and the performance achieved.
Collaborative learning	Throughout the semester, 4 sessions will be dedicated to working in small groups (10-12 students). During the sessions,
	various topics related to the contents of the subject will be discussed and discussed, and activities related to them will be
	carried out, for which specific bibliography will be used (printed or through the use of electronic resources).
Seminar	
	In small groups of 10-12 students, they will work on a topic on the agenda designated in advance by the teacher, and of which
	each student will prepare a summary / outline / glossary of terms, which will give a written copy to the teacher at the end of the
	session . The session consists of the teacher-led sharing of what the group's students have extracted from their previous work
	on this topic.
	There will be 2 sessions throughout the semester, both the delivery of the summary / outline / glossary of terms, as well as the
	active participation of the students computes 10% of the final grade for the course, with 5% corresponding to each of the
	sessions.

Personalized attention		
Methodologies	Description	
Laboratory practice	The students are free to consult all their doubts during the theoretical sessions (lectures, small groups) and practices. In	
Seminar	addition, you will have the possibility of solving any questions related to the subject or the activities in the personalized	
Collaborative learning	tutorials.	
	In the case of students with recognition of part-time dedication, they may raise questions by attending individualized tutorials	
	or via email.	
	STUDENTS WITH RECOGNITION OF DEDICATION TO PART TIME AND ACADEMIC DISPENSE OF EXEMPTION FROM	
	ASSISTANCE:	
	Both in the final opportunity of the semester and in the second opportunity, the grade obtained in the theoretical exam and the	
	corresponding to the practical exam, will be taken into account for the calculation of the overall grade, representing 80% and	
	20% ofthe final grade, respectively.	

Assessment			
Methodologies	Competencies	Description	Qualification
Laboratory practice	A3 A6 A7 A8 B3 B4	After finishing the period of Laboratory Practices, a written exam (compulsory) will be	20
	C7	carried out on the practical contents of the subject, consisting of short questions and	
		images to identify. This exam represents 20% of the overall grade.	
Mixed	A3 B3 B4 B8 C8	There will be two written and liberatory theoretical partial exams throughout the	60
objective/subjective		semester. Each of them will represent 30% of the final grade for the course.	
test		There will also be a theoretical final exam for those students who have not passed	
		these partial exams or who have not submitted to them. In this case, the final exam	
		will account for 60% of the final grade for the course.	
		The theoretical exams will consist of test questions (multiple choice) and / or short	
		answer about the contents of the master classes and small group sessions.	
Objective test	A3 B3 B4 B6 B8 C8	There will be 2 written tests throughout the quaryer. These tests will consist of a	10
		combination of different types of questions: multiple choice, short answer, essay type,	
		identification of schemes / images, completion and / or association.	
Seminar	B4 B8 C7	At the end of each of the two seminar session, the student must provide a summary /	10
		outline / glossary of terms on the subject of the agenda designated in advance by the	
		teacher. Likewise, there will be a discussion by the teacher of what the students have	
		extracted from their previous work on this topic.	
		Both the delivery of the summary / outline / glossary and active participation compute	
		for the final grade of the subject; each session will account for 5% of it.	

Assessment comments

GENERAL CONSIDERATIONS

Attendance at practices is a necessary condition for the consideration of submitted and to be able to take the final exam of the subject.

Failure to attend more than 25% of the laboratory practices WITHOUT justification, will be considered Not Presented.

Students will have two official opportunities to pass the subject. Likewise, there will be 2 liberatory theoretical partial exams throughout the semester.

The grade of Not Presented will be applied in the event that the student does not appear for the corresponding tests in the official assessment opportunities or does not carry out the laboratory practices.

EVALUATION ASPECTS AND CRITERIA

1. STUDENTS WITH FULL DEDICATION

In the final quarter opportunity, the different sections included in the evaluation system will be taken into account for the computation of the final grade, each of which must be passed to proceed to the calculation of the final grade.

There will be two theoretical and written partial exams (each computes 30% of the final grade), as well as a final exam for those students who have not passed these partial exams or who have not submitted to them, representing 60% of the final grade.

The exam of the practical contents will suppose 20% of the global qualification.

Both the objective tests and the seminar sessions will each represent 10% of the final grade .

On the second opportunity, the theoretical (as a awhole) and /or practical parts not passed may be recovered, assuming 80% and 20% of the final grade, respectively.

2. STUDENTS WITH RECOGNITION OF DEDICATION TO PART TIME AND ACADEMIC DISPENSE OF EXEMPTION FROMASSISTANCE
Both in the final opportunity of the semester and in the second opportunity, the grade obtained in the theoretical exam and the one corresponding to practical exam will be taken into account for the calculation of the overall grade, representing 80% and 20% of the final grade, respectively.

NOTES:

For the qualifications in the different activities subject to evaluation to be taken into account, it is necessary to pass (reach 50% of the qualification) each of the sections / tests that make up said evaluation system. If this score is not reached in any of them and even if the average of the different sections / tests is equal to or greater than 5 (out of 10), the subject will appear as a failure and the grade will be 4.9.

Subjects that are recommended to be taken simultaneously
Subjects that continue the syllabus
Other comments

The adaptation to the first year of university education supposes an important effort for every student. The learning will include aspects such as: incorporation of fundamental concepts, familiarization with the work in the laboratory, elaboration of simple memories of practices, elaboration and exposition of summaries / schemes / glossaries of terms and the search for information. Therefore, constant study and periodic reviews as the course progresses are very important. It is recommended to work on the subject of the master classes beforehand, as well as taking the relevant notes during them. It is recommended to limit the delivery of woks to computer sopport to comply with Green Campus program of the Faculty.

(*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
