

Teaching Guide				
Identifying Data				2021/22
Subject (*)	Mathematics II		Code	611G02010
Study programme	Grao en Administración e Dirección de Empresas			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	First	Basic training	6
Language	SpanishGalician			
Teaching method	Face-to-face			
Prerequisites				
Department	Economía			
Coordinador	Lema Fernández, Carmen Socorro		E-mail	carmen.lemaf@udc.es
Lecturers	Blanco Louro, Amalia Lema Fernández, Carmen Socorro Pereira Saez, Maria Jose Seijas Macias, Jose Antonio		E-mail	amalia.blanco.louro@udc.es carmen.lemaf@udc.es maria.jose.pereira@udc.es antonio.smacias@udc.es
Web	moodle.udc.es			
General description	<p>The objective of this course is to introduce students to the basics of differential calculus of several variables and mathematical programming, which will be necessary for learning other subjects of the grade and for their future career. The student will understand the basic concepts presented and the results that relate them, and will be able to properly and rigorously apply this knowledge to solving practical problems. An special emphasis will be made on the application of the course contents to economic problems, and on the interpretation of the results.</p> <p>Another aim is to help students develop generic skills such as analysis and synthesis, logical reasoning, problem solving, critical thinking, independent learning, or retrieving and using information from various sources.</p>			
Contingency plan	<p>1. Modifications to the content</p> <p>The contents are not modified</p> <p>2. Methodologies All methodologies will be carried out virtually, using the Microsoft Teams application. Classroom sessions will be recorded in the corresponding Microsoft Teams groups. In Moodle, a classroom session will also be available to all subject groups.</p> <p>3. Mechanisms for personalized attention to students</p> <p>The mechanisms for personalized attention to the student are always virtual. For that, the available tools will be used: Microsoft Teams, E-mail, Moodle, or Telephone Service.</p> <p>4. Changes in the evaluation</p> <p>All the planned tests will be carried out electronically (if it is not possible to carry them out in person). The format of the tests may be modified to adapt them to their virtual realization.</p> <p>Evaluation observations: In the virtual scenario, the final test could have a part evaluated by means of a multiple-choice test. Students may be asked to make a defense of the written test taken. Failure to defend the evidence or an unsatisfactory defense will result in a score of zero in the evidence.</p> <p>5. Modifications of the bibliography or webgraphy.</p> <p>The basic bibliography is accessible as an e-book through the library.</p> <p>All the materials of the subject will be available in Moodle</p>			

Study programme competences	
Code	Study programme competences
A3	Evaluate and foreseeing, from relevant data, the development of a company.
A4	Elaborate advisory reports on specific situations of companies and markets
A6	Identify the relevant sources of economic information and to interpret the content.
A8	Derive, based on from basic information, relevant data unrecognizable by non-professionals.
A9	Use frequently the information and communication technology (ICT) throughout their professional activity.
A10	Read and communicate in a professional environment at a basic level in more than one language, particularly in English

A11	To analyze the problems of the firm based on management technical tools and professional criteria
A12	Communicate fluently in their environment and work by teams
B1	CB1-The students must demonstrate knowledge and understanding in a field of study that part of the basis of general secondary education, although it is supported by advanced textbooks, and also includes some aspects that imply knowledge of the forefront of their field of study
B2	CB2 - The students can apply their knowledge to their work or vocation in a professional way and have competences typically demonstrated by means of the elaboration and defense of arguments and solving problems within their area of work
B3	CB3- The students have the ability to gather and interpret relevant data (usually within their field of study) to issue evaluations that include reflection on relevant social, scientific or ethical
B4	CB4-Communicate information, ideas, problems and solutions to an audience both skilled and unskilled
B5	CB5-Develop skills needed to undertake further studies learning with a high degree of autonomy
B10	CG5-Respect the fundamental and equal rights for men and women, promoting respect of human rights and the principles of equal opportunities, non-discrimination and universal accessibility for people with disabilities.
C1	Express correctly, both orally and in writing, in the official languages of the autonomous region
C4	To be trained for the exercise of citizenship open, educated, critical, committed, democratic, capable of analyzing reality and diagnose problems, formulate and implement knowledge-based solutions oriented to the common good
C5	Understand the importance of entrepreneurial culture and know the means and resources available to entrepreneurs
C6	Assess critically the knowledge, technology and information available to solve the problems and take valuable decisions
C7	Assume as professionals and citizens the importance of learning throughout life.
C8	Assess the importance of research, innovation and technological development in the economic and cultural progress of society.

Learning outcomes			
Learning outcomes		Study programme competences	
Identify the notable sets of a subset of \mathbb{R}^n .	A8 A11		
Understand the basic concepts of the euclidean space \mathbb{R}^n .	A8 A11		
Determine if a set is open, closed, bounded, compact and convex.	A8 A11		
Understand the concept of function of several variables.	A8 A11		
Draw the level set of a function of two variables.	A8 A11		
Understand the concept of continuous function.	A8 A11		
Determine if a function is continuous or not.	A8 A11		
Recognize a linear function.	A8 A11		
Recognize a quadratic form.	A8 A11		
Classify a quadratic form by examining the signs of the principal minors and by eigenvalues.	A8 A11		
Classify a constrained quadratic form.	A8 A11		
Calculate and interpret partial derivatives and elasticities.	A4 A8 A11	B1 B2 B5 B10	C1 C7

Find the Taylor polynomial of a function.	A8 A11		
Calculate the partial derivatives of a compounded function.	A8 A11		
Use the existence theorem to analyze if a equation defines an implicit real function.	A8 A11		
Find the partial derivatives and elasticities of an implicit function, and interpret them.	A8 A11		
Analyze the concavity/convexity of a function.	A8 A11		
Formulate mathematical programming problems.	A3 A4 A6 A8 A9 A10 A11	B1 B2 B3 B4 B5 B10	C1 C4 C5 C6 C7 C8
Distinguish between local and global optima.	A8 A11		
Graphically solving an optimization problem	A8 A11	B3	
Analyze the existence of global optima using the Weierstrass theorem.	A8 A11		
Find the critical points of a function of several variables.	A8 A11		
Classify the critical points using the second-order conditions.	A8 A11		
Determine the local or global character of the optima of an unconstrained problem.	A8 A11		
Formulate economic problems as mathematical programs with equality constraints.	A8 A11		
Find the critical points of a mathematical program with equality constraints.	A8 A11		
Classify the critical points and interpret the Lagrange multipliers.	A8 A11		
Determine the local or global character of the optima of an equality-constrained problem.	A8 A11		
Know the structure and basic properties of a linear program.	A8 A11		
Formulate simple economic problems as linear programs.	A3 A4 A8 A11 A12	B1 B2 B3 B4 B5 B10	C1 C4 C6 C7 C8

Solve linear programs by the simplex algorithm.	A3	B1	C1
	A4	B2	C4
	A6	B3	C5
	A8	B4	C6
	A9	B5	C7
	A11	B10	C8

Contents	
Topic	Sub-topic
1. The euclidean space \mathbb{R}^n .	The vector space \mathbb{R}^n . Inner product. Norm. Distance. Interior, closure, isolated, limit and boundary points. Open and closed sets. Compact sets.
2. Functions of several variables.	Basic concepts. Graphical representation of real functions. Level sets. Limit of a function at a point. Continuity. Linear functions. Quadratic forms. Classification. Constrained quadratic forms.
3. Derivatives of functions of several variables.	Partial derivatives. Partial derivatives of higher order. Class one function Chain's Rule. Taylor's theorem. Implicit function theorem.
4. Convexity of sets and functions.	Convex sets. Properties. Convex functions. Properties. Characterization of twice continuously differentiable convex functions.
5. Introduction to mathematical programming.	Formulation of a mathematical program. Local and global optima. Graphic solving. Basic Theorems in optimization.
6. Unconstrained optimization.	First-order necessary conditions. Second-order conditions. The convex case. Sensitivity analysis.
7. Equality-constrained optimization	Formulation. First-order necessary conditions: the Lagrange theorem. Second-order conditions. The convex case. Sensitivity analysis.
8. Linear programming.	Formulation of linear programs. Basic feasible solutions. Fundamental theorems. The simplex algorithm.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Introductory activities	A6 A9 A12 C1	1	0	1

Multiple-choice questions	A10 B2 B3 B4	2	7	9
Mixed objective/subjective test	A10 B2 B3 B4	3	15	18
Guest lecture / keynote speech	A3 A4 A8 A9 A11 A12 B1 B5 C6 C7	15	15	30
Seminar	B10 C4 C5 C8	2	4	6
Practical test:	A8 A11 B1 B2 B3 B4 B5 C1	2	8	10
Problem solving	A6 B1	25	50	75
Personalized attention		1	0	1

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Introductory activities	It will be the presentation of the course (one hour).
Multiple-choice questions	There will be several multiple-choice exams. These exams will have questions with several given answers --only one will be correct-- related to theoretical and practical concepts covered in the course.
Mixed objective/subjective test	At the end of the course, there will be a mixed (theoretical/practical) exam. This exam will take place at the official date determined by the Faculty.
Guest lecture / keynote speech	There will be 15 hours of keynote speech, that will be focused on the exposition of the theoretical contents.
Seminar	They will be several seminars with personalized attention of character essentially practical. These seminars will be virtual through the platform Microsoft Teams.
Practical test:	There will be several practical tests along the term. These tests will consist of one or several questions to which will have to answer by writing and justifying properly the answers.
Problem solving	There will be 25 hours of problem solving classes, which will be focused on the formulation and solving of problems related to the practical contents of the subject.

Personalized attention	
Methodologies	Description
Problem solving Seminar	<p>The students will have of the following roads of communication:</p> <ul style="list-style-type: none"> - Asynchronous Communication: <ul style="list-style-type: none"> -Platform Moodle (by means of the use of the forums or direct messages). -Email of the teachers. For asynchronous queries. - Synchronous communication (Platform Microsoft Teams): <ul style="list-style-type: none"> -Personal Tutoring using the periods of time fixed by the teachers of the subject. -Seminars (Group tutoring). <p>Also it will be possible tutoring in other dates and different hours to the established, previous application by part of the students.</p>

Assessment			
Methodologies	Competencies	Description	Qualification
Practical test:	A8 A11 B1 B2 B3 B4 B5 C1	There will be two presental exams, their weighting in the final evaluation is 20% (2 points). In this exams, the reasoning capacity of the students will be especially valued.	20

Mixed objective/subjective test	A10 B2 B3 B4	The final (presential) exam will represent a 60% of the final mark (6 points). It will be valued a good understanding of the concepts, the use of appropriate reasoning, the proper use of mathematical language, and the skills in formulating and solving problems.	60
Multiple-choice questions	A10 B2 B3 B4	Throughout the course there will be two multiple choice tests (multiple choice), their weighting in the final evaluation is 20% (2 points).	20

Assessment comments

A) EVALUATION REGULATIONS

1. Conditions for making of the examinations and test, and identification of students

a) Face-to-face: During the realisation of the examinations will not be able to have access to any device that allow the communication with the outside and/or the storage of information. It will be able to deny the entrance to the classroom with this type of devices. They will not admit the examinations written with pencil. The students will have to identify by means of DNI or equivalent for making the tests of evaluation.

b) Non-attendance: In the case of telematic tests, students will not be able to keep contact with other people and will be able to request that it activates his camera (or the one of his mobile) and identifies by means of his DNI or equivalent.

2. Using calculator

The calculator that can be used must not have ANY of the following characteristics: Possibility of transmitting data, being programmable, graphic display, solving equations, operations with matrix, calculation of determinants, derivatives and/or integrals, storage of alphanumeric data. When it has any of these characteristics, it will be withdrawn. If during the development of the exam a calculator is used that is not allowed, the same measures will be adopted as when the students are copying.

B) QUALIFICATION TYPES

1. Not taken qualification

It will award the qualification of NOT TAKEN to the student that only participate in activities of evaluation that have a weight less than 20% of the final qualification, with independence of the qualification obtained.

2. Students part time (or with dispenses of attendance):

it will be evaluated according to the same norms that the rest of students

C) EVALUATION OPPORTUNITIES

1. First opportunity

Continuous evaluation

Continuous evaluation will consist of two multiple choice tests (multiple choice questions) and two presential exams (practical test) in the classroom.

Their weighting in the final evaluation is 40% (4 points)

Final exam

Mixed objective/subjective test. The final (presential) exam will represent a 60% of the final mark (6 points)

2. Second opportunity

Continuous evaluation

Qualification of the continuous evaluation (multiple choice questions and practical test) obtained at the first opportunity remains without value. The second opportunity consists of a re-evaluation of the multiple choice questions, by means of a multiple choice test valued at 20% of the final mark and a re-evaluation of the practical test by solving exercises similar to those of the classroom, valued in 20% of the final mark.

Final exam

Mixed objective/subjective test. The final (presential) exam will represent a 60% of the final mark (6 points).

3. Opportunity in Advance: The final qualification of the student that request this opportunity will be the obtained in the face-to-face examination valued on 10 points.

Recommendations

Subjects that it is recommended to have taken before

Mathematics I/611G02009

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Other comments

It is advisable to have passed Mathematics I. Students must be familiar with the concepts and fundamental results of linear algebra (matrices, determinants and systems of linear equations), and differential calculus in one variable (limit, continuity, derivative, elasticity, optima, convexity).
