	Study programme competences / results
Code	Study programme competences / results
A1	CE1 - Define, evaluate and select the most appropriate architecture and software to solve a problem
A2	CE2 - Analyze and improve the performance of a given architecture or software
A3	CE3 - Know the high performance computing basic concepts
A4	CE4 - Deepen in the knowledge of different programming tools and programming languages in the field of the high performance
	computing
A5	CE5 - Analyze, design and implement efficient parallel algorithms and applications
B1	CB6 - Possess and understand the knowledge that give a baseline or opportunity to be original in the development and/or application of
	ideas, often in a research environment

B2	CB7 - The students have to know how to apply the acquired knowledge and their capacity to solve problems in new or hardly explored
	environment inside wider contexts (or multidiscipinary) related to its area of development
B5	CB10 - The students have to possess learning skills that allows them to continue to study in a mainly self-driven or autonomous manner
В6	CG1 - Be able to search and select useful information to solve complex problems, using the bibliographic sources of the field
B10	CG5 - Be able to work in teams, specially multidisciplinary, and do a proper time and people management and decision taking
C1	CT1 - Use the basic technologies of the information and computing technology field required for the professional development and the
	long-life learning

Learning outcomes			
Learning outcomes	Study programme		
	con	npetenc	es/
		results	
Understand the main organizational differences in parallel architectures	AJ1	BJ1	
	AJ3	BJ5	
Understand the main programming models	AJ1		
	AJ3		
	AJ4		
Apply the knowledge acquired to the efficient implementation of parallel applications using different programming models	AJ2	BJ2	CJ1
	AJ5	BJ6	
		BJ10	

Contents				
Topic Sub-topic				
Parallel programming	Introduction			
	Parallel programming paradigms			
	Parallel programs using shared memory directives			
	Parallel programs using message-passing libraries

	Methodologies
Methodologies	Description
Laboratory practice	Practical classes in the laboratory to familiarize the students, from a practical point of view, with the contents seen in the
	theoretical classes. These sessions will be developed through Teams.
Supervised projects	Realization of works in which the student has to use the acquired knowledge to solve different problems in an autonomous way.
Guest lecture /	Theoretical classes in which the content of each subject is exposed. These sessions will be developed through Teams.
keynote speech	

	Personalized attention
Methodologies	Description

Laboratory practice	The personalized attention in the accomplishment of the laboratory practices and the supervised projects is indispensable to
Supervised projects	direct to the students in the development of the work. It is recommended that students use the personalized attention to
	validate the work they are doing.
	Personalized attention will be carried out through Teams, Aula Cesga and/or email.

		Assessment	
Methodologies	Competencies /	Description	Qualification
	Results		
Laboratory practice	A1 A2 A3 A4 A5 B1	Evaluación das prácticas	50
	B2 B5 B10 C1		
Supervised projects	A1 A2 A3 A4 A5 B1	Evaluación dos traballos académicamente dirixidos	50
	B2 B5 B6 C1		

Assessment comments

The subject is divided into two parts (directive-based programming and message passing). Each part represents 50% of the final grade of the subject. To pass the subject, the student must obtain a minimum grade of 5 averaging both parts, with a minimum of 4 in each one. In the second chance only is possible to improve the grade of the supervised projects. The qualification of the lab practices will be the one obtained previously throughout the academic year. Fraudulent conduct in the assessments will directly involve a grade of '0' in the corresponding part (OpenMP/MPI) and chance.
