General description	A newly installed Operating syste	em is inherently	insecure. It has	a certain number of vulne	rabilities, depending on such		
	things such as the age of the O.S	S., the amount o	f services it prov	ides, the existence of initi	al backdoors not already		
	patched, and the use of default	policies designe	d without securit	y in mind			
	By Hardening Operating Systems we refer to the act of configuring an operating system with the aim of making it as secure						
	as possible, so that we minimize the risk of getting it compromised. This usually implies applying patches, changing default						
	O.S. policies, and removing (or d	disabling) non-es	ssential aplication	ns and/or services.			
	In this course we'll try to identify	common O.S. vı	ulnerabilities and	how to defend the O.S. a	against them. Both UNIX (linux)		
	and Windows type O.S. will be considered.

	Study programme competences / results
Code	Study programme competences / results
А3	CE3 - Knowledge of the legal and technical standards used in cybersecurity, their implications in systems design, in the use of security
	tools and in the protection of information
A4	CE4 - To understand and to apply the methods and tools of cybersecurity to protect data and computers, communication networks,
	databases, computer programs and information services
A5	CE5 - To design, deploy and operate a security management information system based on a referenced methodology

A8	CE8 - Skills for conceive, design, deploy and operate cybersecurity systems
A9	CE9 - Ability to write clear, concise and motivated projects and work plans in the field of cybersecurity
A11	CE11 - Ability to collect and interpret relevant data the field of computer and communications security
A13	CE13 - Ability for analysing, detecting and eliminating software vulnerabilities and malware capable to exploit those in systems or networks
B2	CB2 - Students will be able to apply their knowledge and their problem-solving ability in new or less familiar situations, within a broader
	context (or in multi-discipline contexts) related to their field of specialization
B5	CB5 - Students will apprehend the learning skills enabling them to study in a style that will be selfdriven and autonomous to a large extent
B6	CG1 - To have skills for analysis and synthesis. To have ability to project, model, calculate and design solutions in the area of information,
	network or system security in every application area
B7	CG2 - Ability for problem-solving. Ability to solve, using the acquired knowledge, specific problems in the technical field of information,
	network or system security
B8	CG3 - Capacity for critical thinking and critical evaluation of any system designed for protecting information, any information security
	system, any system for network security or system for secure communication
B10	CG5 - Students will have ability to apply theoretical knowledge to practical situations, within the scope of infrastructures, equipment or
	specific application domains, and designed for precise operating requirements
СЗ	CT3 - Ability to include sustainability principles and environmental concerns in the professional practice. To integrate into projects the
	principle of efficient, responsible and equitable use of resources
C4	CT4 - Ability to ponder the importance of information security in the economic progress of society

Contents			
Topic Sub-topic			
Introduction to H.O.S.  The concept of hardening an operating system. Vulnerabilities. Hardening description of the concept of hardening an operating system.			
	installation, post installation and maintenance.		
Boot procedure hardening	Physycal system security. Hardening the Firmware (BIOS, UEFI). Hardening the Boot		
	Loader		
Hardening user acounts	Identifying and eliminating non used accounts. Limiting user privileges. Group		
	Policies. Hardening authentification. Forcing Password policies		

Hardening File Systems	File system permissions and protections. Quotas. Locking system directories.
	Encryption. Limiting access to devices
Hardening applications	Identifying and eliminating non used applications. Identifying connections and
	eliminating apps/packeges providing unwanted connections. Limiting applications
	provileges. Excuting in secure environments: container based execution, SELinux
Hardening network	Identify and eliminate unwanted connections/services. Packet filetring
Monitoring and maintenance	System monitoring. Logs. Securing logs. Identifying possible threats. Security
	patches.

Methodologies			
Methodologies	Description		
Introductory activities	Introductory activities to get the students acquainted with O.S. vulnerabilities and their defence against them		
Guest lecture /	The student will attend to the lectures given by the teacher about how to minimize the chance of having usable vulnerabilities		
keynote speech	in the different parts of an O.S.: boot procedure, user accounts, network connections,,,		
Problem solving	Problems and short practical questions to consolidate the contents presented in the master classes.		
Laboratory practice	Lab assignments diealing with securing the different parts of real world operating systems. Both UNIX (linux) and windows		
	types will be considered		
Objective test	Test about the fundamental contents of the subject		

Personalized attention		
Methodologies	Description	
Guest lecture /	Although lab assignments,and problem solving will be dealt with mostly in the allocated lab/room hours, the teacher will be	
keynote speech	available to help with any question arising from these items in a individualized basis.	
Problem solving		
Laboratory practice	The same will stand for the concepts exposed during the keynote speeches	

		Assessment	
Methodologies	Competencies /	Description	Qualification
	Results		

Objective test	A3 A4 A5 A8 A9 A11	Questions related to the knowledge acquired.	50
	A13 B2 B5 B6 B7 B8		
	B10 C3 C4	Questions that involve reasoning over the knowledge acquired	
		Questions that involve practical problem-solving on real world O.S. Hardening	
		Both the objective test and the laboratory practice must be passed indepently in order	
		to pass the subject	
Laboratory practice	A4 A5 A8 A9 A11 A13	Control of the labs assignments and evaluation of the results achieved.	50
	B2 B5 B6 B7 B8 B10		
	C3	Work done during lab time will represent 40-60% of the total lab score	
		A practical test, consisting of the reolution of some exercises on a physical	
		equipment (real or virtualized machine) would yield a score up to 60-40% of the total	
		lab score. This test will be carried out without the help of any additional material.	
		This practical test will take place on the last lab sessions or after finishing each part of the course (linux, windows)	
		Should this not be possible they will take place on the day of the Objective test (after it).	
		Both the objective test and the laboratory practice must be passed indepently in order to pass the subject .	
		to pass the subject.	
		On July the assestment will only consist of the objective test. Should a student also	
		want to take the practical test, they must request it in writing at least one week before	
		the date set for the objective test.	

## **Assessment comments**

To pass the subject, it is necessary to pass both parts separately: objective test and laboratory practices (that is, 2.5 in each part)FIRST OPPORTUNITYStudents who do not participate in any part of the evaluation at the first opportunity will have 0 in each non-participated part. If the objective test is the final grade will be No PresentedSECOND OPPORTUNITY Only the objective teste will be repeated. If a student also wants to take the practical test, he/she must request it in

writing at least one week before the date set for the objective test.

PLAGIARISM: Plagiarism is regarded as serious dishonest behavior. If any form of plagiarism is detected in any of the exams or provided material, the final grade will be FAIL (0), and the incident will be reported to the corresponding academic authorities for prosecution.
