| General description      | <p>The objective of this subject is to provide students with knowledge of the components of a current infrastructure for high performance computing, how they work together and how to manage them.</p> <p>The student will be able to design and manage high-performance infrastructures taking into account the analysis of the present needs and their possible future evolution, as well as the requirements to propose an infrastructure design project that will take into account hardware, software and support infrastructures. This will include the computational part, the storage of data, the communications infrastructure and the monitoring of the system.</p> |        |                             |           |

## Study programme competences / results

| Code | Study programme competences / results  |
|------|--|
| A2   | CE2 - Analyze and improve the performance of a given architecture or software  |
| A3   | CE3 - Know the high performance computing basic concepts   |
| A6   | CE6 - Know the available tools for the distributed systems computing   |
| B1   | CB6 - Possess and understand the knowledge that give a baseline or opportunity to be original in the development and/or application of ideas, often in a research environment  |
| B2   | CB7 - The students have to know how to apply the acquired knowledge and their capacity to solve problems in new or hardly explored environment inside wider contexts (or multidisciplinary) related to its area of development |
| B4   | CB9 - The students have to be able to communicate their conclusions, their knowledge and the reasons that hold them to specialized and non specialized audience in a clear and unambiguous manner                              |

|     |   |
|-----|---|
| B5  | CB10 - The students have to possess learning skills that allows them to continue to study in a mainly self-driven or autonomous manner  |
| B6  | CG1 - Be able to search and select useful information to solve complex problems, using the bibliographic sources of the field   |
| B7  | CG2 - Elaborate adequately and originally written essays or motivated reasonings, write planings, work projects, scientific papers and formulate reasonable hypothesis                                      |
| B8  | CG3 - Be able to maintain and extend properly funded theoretical hypothesis to allow the introduction and exploitation of novel and advanced technologies in the field                                      |
| B10 | CG5 - Be able to work in teams, specially multidisciplinary, and do a proper time and people management and decision taking   |
| B11 | CG6 - Be able to understand and express in english, both written and spoken, information, ideas, knowledge, problems and solutions in the HPC environment   |
| C1  | CT1 - Use the basic technologies of the information and computing technology field required for the professional development and the long-life learning   |
| C2  | CT2 - Estimulate the capacity to work in transdisciplinary and interdisciplinary teams to offer proposals that contribute to the contribute to the economical, social and political sustainable development |
| C4  | CT4 - Value the importance of research, innovation and the technological development in the socioeconomical and cultural advance of the society   |

| Learning outcomes   |     |                                       |     |

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

## Methodologies

| Methodologies       | Description  |
|---------------------|--|
| Laboratory practice | Problem solving and practical cases in the computer room, which allow the student to become familiar from a practical point of view with the issues exposed in the lectures. |
| Document analysis   | Study of the notes, books and references on the internet that are available to the student   |
| Supervised projects | Assignments will be proposed consisting of gathering and analyzing information related to the lectures and the skill acquired during the labs.                               |

## Personalized attention

| Methodologies                              | Description   |
|--|---|
| Laboratory practice<br>Supervised projects | During the labs, a professor will assist the students by introducing the task, helping in the first stages, and solving doubts during the development of the tasks.<br><br>&lt;br&gt;<br><br>Students may consult professors during the development of supervised projects. |

## Assessment

| Methodologies       | Competencies / Results | Description  | Qualification |
|---------------------|------------------------|--|---------------|
| Laboratory practice | A2 B2 B10 C1 C2        | The quality of the work developed inside and outside the lab will be valued.   | 50            |
| Supervised projects | A3 A6 B1 B4 C4         | The quality of the deliverables will be values, taking into account the degree of help that the student may have needed. | 50            |

## Assessment comments

In order to pass the subject, it is required to achieve at least 50% of the total qualification.  
No special consideration is made with respect to part-time students.
