General description	Historical introduction to water su	pply and sewer systems.	Water cat	tchment and drinking wa	ater treatments. Water supply	
	networks: general concepts, desc	ription and design. Sewe	er systems	: general concepts , des	scription and design.	
	Sustainable drainage systems (SUDS). Waste water treatments prior to discharge to the aquatic media. Legal framework.					

Contingency plan	1. Modifications to the contents
	No significant changes in the contents are foreseen. If the contingency situation is very long, it is possible that the workload
	will be reduced.
	2. Methodologies
	*Teaching methodologies that are maintained
	Documentary source analysis
	Collaborative learning
	Problem solving
	Internships through ICT
	Objective evidence
	Bibliographic review
	*Teaching methodologies that are modified
	Initial activities and Master Session will be given on-line in part, but another part will be replaced by videos and/or
	documentation for review.
	Oral presentation will be made by telematic means or by means of a video.
	Field trips will be cancelled.
	3. Mechanisms for personalized attention to students
	Timetables will be established in which the student can book a date by email. The meetings will take place via
	videoconference. Consultations will also be attended to by mail. In no case will we attend to them by telephone or whatsup.
	4. Modifications in the evaluation
	The 5% assigned to the tasks of the field visits will be transferred to the resolution of problems that will take a weight of
	15%.
	*Comments to the evaluation: the tests will be solved through Campus Virtual. or GoogleForms. Deliveries will be made
	through Campus Virtual.
	5. Modifications to the bibliography or webgraphy
	More bibliographic sources and other documentation will be provided, informing the student through the Campus Virtual.

	Study programme competences
Code	Study programme competences
A1	Knowledge, understanding and capacity to apply legislation related with water engineering during professional development. Capacity to
	analyse the working mechanism of the economy and public and private management of water
A2	Capacity to resolve basic physical problems of water engineering and theoretic and practical Knowledge of the chemistry, physics,
	mechanics and technologic properties of the water
A3	Capacity to apply the mechanics of the fluids and the fundamental flow equations in calculate for conductions at pressure and in free layer
A4	Capacity to apply the hydrology knowledge and the principles of flow mechanics in the method of calculations about hydrology as well as
	surface and underground. Capacity to make the evaluation of the hydraulic resources and apply the principal tools to do the hydrologic
	planning and the regulation and lamination of the inputs Capacity to analyse the river hydraulics and to apply the knowledge acquired in
	the restauration of the river direction and other works about rivers and their surroundings
A5	Knowledge of the basic concepts about ecology applied to water engineering. Capacity to act in the respectful way and enriching way
	about the environment contribution to the sustainable development. Capacity to analyse the ecological quality of water. Knowledge of the
	basic principles of the ecology and basic understanding of the working continental water systems
A6	Capacity to analyse the mechanism of the economy working and the public and private management of water
A11	Knowledge of numerical models applied to hydraulic engineering. Capacity to use and analyse the results of the hydraulic models.
	Capacity to design, develop and analyse numerical schemes used in a hydraulic models

A12	Capacity to use commercial numerical models for flux in free layer, flow pressure, drainage, hydrologic calculations for avenues, sediment
	transport in rivers and costal zones, transport of contaminants and wave propagation
A13	Knowledge of the experimental technics applied to the water engineering. Capacity to design experiments. Capacity to develop reduced
	models in the laboratory. Capacity to use different types of experimental instrumentation, including flowmeter, depth probes,
	three-dimensional speedometer, limnimeter, windlass
A15	General vision and balanced of the basic aspects and application of underground hydrologic from the needs of civil engineering. Capacity
	to Project or interpret the different hydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the
	constructive aspects of the water uptake
A16	Knowledge of the chemical basis of water which totally condition its behaviour in nature and its uses. Understanding and knowledge of the
	different water regulations for quality at local, national and European level
A17	A global vision of water supply by the distinct elements which form it, at the same time having the necessary knowledge for its basis
	dimensioning and technological aspects related to its management and constructive implementation
A18	Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general
	analysis of water engineering projects in the area of cooperation and development and humanitarian aid.
A19	Knowledge of advanced water treatment with different conclusions: depuration, re-use, purification, elimination of nutrients and
	regeneration treatments
A24	Capacity to design and manage the water supply and treatment in a population area, including design and Project for solutions regarding
	water treatment, drainage, and advanced management of residual waters in the city. Knowledge regarding advanced processes for the
	water treatment, elimination of nutrients, and management strategy in times of rainwater
A25	Knowledge and understanding of water in different situations: the working of ecosystems, environmental factors with the purpose of to
	make an inventory of medium, applying the methodology to value the impact and its use in studies and evaluations of the environmental
	impact.
B1	To resolve problems effectively
B2	To apply critical thinking, logic and creativity
B3	To work individually with initiative
B4	To communicate effectively in work surroundings
B5	Continuous recycling of knowledge in a general perspective in a global situation of water engineering
B6	Understanding of the need to analyse history to understand the present
B7	Facility to integrate in multidiscipline teams
B8	Capacity to organize and plan
B9	
	Capacity for analysis, synthesis and structure of information and ideas
C1	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people
C1 C2	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face
C1 C2 C3	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life
C1 C2 C3 C4	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in
C1 C2 C3 C4	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society
C1 C2 C3 C4 C5	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often
C1 C2 C3 C4 C5	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigation
C1 C2 C3 C4 C5 C6	Capacity for analysis, synthesis and structure of information and ideasTo understand the importance of the enterprising culture and to know the means at the reach of the enterprising peopleTo value knowledge critically, technology and available information to resolve problems that they will faceTo assume as a professional and citizen the importance of learning throughout lifeTo value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in societyTo posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigationThe students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known
C1 C2 C3 C4 C5 C6	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigation The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study area
C1 C2 C3 C4 C5 C5 C6 C7	 Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigation The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study area The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been
C1 C2 C3 C4 C5 C6 C7	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigation The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study area The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judments
C1 C2 C3 C4 C5 C6 C7 C7 C8	Capacity for analysis, synthesis and structure of information and ideasTo understand the importance of the enterprising culture and to know the means at the reach of the enterprising peopleTo value knowledge critically, technology and available information to resolve problems that they will faceTo assume as a professional and citizen the importance of learning throughout lifeTo value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in societyTo posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigationThe students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study areaThe students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judmentsThe students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and
C1 C2 C3 C4 C5 C6 C7 C8	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigation The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study area The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judments and students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and not spezialated in a clear and unambiguous way.
C1 C2 C3 C4 C5 C6 C7 C7 C8 C9	Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigation The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study area The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judments The students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and not spezialated in a clear and unambiguous way. The student must possess the learning ability with permits them to continues to study in a manner wich will be in a great measure self

	Contents
Торіс	Sub-topic
1. Introduction to water supply systems	1.1. Basic concepts and description of the elements of a water supply system
2. Water catchment systems	2.1 Introduction and review of hydrology
	2.2. Catchment of surface water: rivers, lakes, reservoirs,
	2.3. Spring catchments
	2.4. Pumping wells
3. Water treatment for human consumption	3.1. Introduction to drinking water treatment
	3.2. Pretreatments
	3.3. Primary treatments
	3.4. Secondary treatments
	3.5. Desinfection
	3.6. Advanced treatments
4. Water supply networks	4.1. General concepts: overview of water supply and review of basic concepts of
	hydraulics
	4.2. Description of each component: pipes, valves, pumps, reservoirs and other
	elements.
	4.3. Design and modelling

5. Urban drainage systems	5.1. General concepts: runoff generation and management, sewer systems and			
	wastewater treatments			
	5.2. Urban drainage management			
	5.3. Structures of runoff detention and treatment			
	5.4. Sustainable urban drainage systems			
6. Sewer systems	6.1. Description			
	6.2. Design and modelling			
7. Hystoryof water supply and sanitation systems and their	7.1. Historical introduction to supply and sewer systems			
role in society	7.2. Characteristics of nowadays water services			
8. Legal Framework	8.1. European legal framework

Methodologies				
Methodologies	Description			
Introductory activities	Opening of the sessions with an activity that helps to put the student in context and to motivate him/her.			
Guest lecture /	Lectures where the main theoretical contents of the subject are regarded.			
keynote speech	Practical examples and real cases are shown also.			
Document analysis	Individual review of documentation as introduction to concepts or as review and deepening methodology.			
	The understanding and asimilation of the mean ideas should be shown in a collaborative learning activity or in an objective			
	test.			
Collaborative learning	Go in depth in supply and sewer systems elements and design methodologies.			
	Working will be divided between groups and shared at the end.			
Problem solving	Solution of problems proposed by the theachers to strengthen theoretical concepts.			
ICT practicals	Design and dimension of components of supply and sewer systems by usign technical software.			
Field trip	Visit to drinking water and/or wastewater treatment in A Coruña			
	Visit to works on a water supply or sewerage system			
Objective test	Multiple choices or true/false tests answered individually or in groups.			
Oral presentation	Preparation of a poster or a set of slides and oral presentation at class. Not only the contents are evaluated but the prepared			
	material and the performance.			
Critical	Reviewing an article and writing an essay based on it			
bibliographical				

Personalized attention				
Methodologies	Description			
Critical	Answering of questions arising from the theoretical contents exposed in class, problem resolution and other activity.			
bibliographical	Monitoring of collaborative tasks.			
Oral presentation				
Document analysis				
Problem solving				
Field trip				
Collaborative learning				
ICT practicals				
Guest lecture /
