General description	This subject introduces and descr	ibes the basic	concepts of stat	istics, starting with the de	scriptive statistics of one or mor		
	variables, passing through probab	oility theory, the	e concept of ran	dom variable and probabil	ity distributions. In addition, in		
	view of their growing importance,	time series (da	ata characteristic	of digitisation processes), bibliometric indicators, library		
	quality indicators and index numb	ers will be intro	oduced. The sta	istical software R and its	various applications will also be		
	introduced.						
Contingency plan	Modifications to the contents						
	None						
	2. Methodologies						
	*Teaching methodologies that are	modified					
	Lecture session, ICT practices an	d case studies	will be taught b	y teledocencia (Teams). T	he objective test will be carried		
	out in a non face-to-face mode through Moodle.						
	Mechanisms for personalized attention to students						
	The student's consultations will be attended by e-mail two days a week. If necessary, individual tutorials by Teams can be						
	arranged in advance by e-mail.	o anomada ay s	o maii mo aayo	a, ,	Tagain talonalo by Toamo can be		
	4. Modifications in the evaluation

	Study programme competences
Code	Study programme competences
A1	CE1 - Know and understand the theoretical and methodological principles of information and documentation management to apply them in
	their professional activity
A5	CE5 - Master the relevant sources of information that allow you to effectively meet the demands of users for both research and business
A8	CE8 - Master the different methods of representation of data, information and knowledge that ensure efficient recovery
A13	CE13 - Know and master the techniques and regulations for the creation and authentication, meeting, selection, organization,
	representation, preservation, recovery, access, dissemination and exchange, and evaluation of resources and information services
A21	CE21 - Possess knowledge of statistics and quantitative analysis of information

A22	CE22 - Acquire computational skills and management of new ICT
B1	CB1 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of
	ideas, often in a research context
B2	CB2 - Apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments within broader (or
	multidisciplinary) contexts related to their area of study
В3	CB3 - Be able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited
	includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments
B4	CB4 - Know how to communicate their conclusions -and the knowledge and ultimate reasons that sustain them- to specialized and
	non-specialized audiences in a clear and unambiguous way
B5	CB5 - Possess the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous
В6	CG1 - Capacity for cooperation, teamwork and collaborative learning
В7	CG2 - Capacity for reflection and critical reasoning
В8	CG3 - Capacity for planning, organization and management of resources, information and operations
В9	CG4 - Capacity for analysis, diagnosis and decision making
B11	CG6 - Ability to understand the importance, value and function of the Digital Information and Documentation Management in the current
	ICT society
C1	CT1 - Express correctly, both orally and in writing, in the official languages ??of the autonomous community
C2	CT2 - Use the basic tools of information and communication technologies (ICT) necessary for the exercise of their profession and for
	learning throughout their lives
C3	CT3 - Develop oneself for the exercise of a citizenship that respects democratic culture, human rights and the gender perspective
C4	CT4 - Understand the importance of the entrepreneurial culture and know the means available to entrepreneurs
C5	CT5 - Acquire skills for life and habits, routines and healthy lifestyles
C6	CT6 - Develop the ability to work in interdisciplinary or transdisciplinary teams, to offer proposals that contribute to a sustainable
	environmental, economic, political and social development
C7	CT7 - Assess the importance of research, innovation and technological development in the socio-economic and cultural progress of
	society
C8	CT8 - Have the ability to manage time and resources: develop plans, prioritize activities, identify criticisms, establish deadlines and comply
	with them

Learning outcomes			
Learning outcomes	Study	y progra	amme
	COI	mpetend	ces
To know the most common descriptive measures and graphical representation of data.	A8	B1	
	A13	В8	
	A21	В9	
Ability to synthesise and analyse a set of data descriptively and graphically.	A8	B2	
	A21	В3	
	A22	B4	
		B5	
		B8	
		В9	
To know the concept of probability, rules of probabilistic calculation and the most common probabilistic models.	A1	B1	
	A21	B2	
		В3	
		B4	
		B5	
Ability to apply computer tools of statistical analysis for decision-making and for the development and exploitation of	A22	B11	C2
information systems.			C6

To integrate theoretical and practical statistical knowledge as a pathway to knowledge and reflective and holistic thinking.	A1	B2	C4

	Contents
Topic	Sub-topic
The following topics develop the contents established in the	Sources of information and statistical methodology. Introduction to the use of
file of the Verification Report, being:	statistical analysis programs (R software). Univariate descriptive statistics. Descriptive
	statistics of two variables. Analysis of dependence between variables and regression
	between statistical variables. Introduction to time series and index numbers. Methods
	for outlier detection (outliers). Probability. Random variables and probability
	distributions.
Introduction to statistics and sources of information	Introduction and purpose of statistics. Major concepts of statistics and data science.
	Data processing methodologies and main problems they address. Sources of
	statistical information. Organization of official statistics at national and international
	level (ONU agencies, Eurostat, INE, and IGE, among others). Main statistics in the
	socioeconomic field (demographic, social, employment, economic statistics). Digital
	information sources.
Descriptive statistics of a unidimensional variable.	General concepts. Frequencies tables. Measures of position, dispersion and shape.
	Graphical representation of unidimensional variables.
Descriptive statistics of more than one variable.	Descriptive statistics of two variables. Measures of position and dispersion. Graphical
	representation of multivariate data. Dependence relationship between qualitative
	variables. Dependence relationship between quantitative variables: simple linear
	regression. Other regression models. Descriptive methods of unsupervised
	classification by clusters and for the detection of outliers.
Introduction to the use of programs for the statistical analysis	Description of the statistical software R. Structure of R. Introduction to programming
of data (R software).	with R. Functions. Object definition. Assignment. Creating and importing databases.
	Obtaining graphs. Elaboration of reports.
Introduction to time series and index numbers.	Indicators in libraries and the field of documentation. Bibliometric indexes. Index
	numbers. Simple and composite index numbers. Introduction to descriptive analysis of
	time series.
Probability	Basic concepts. Operations with events. Laplace's rule. Properties of probability.
	Conditional probability. Product rule, rule of total probabilities, Bayes' rule.
	Applications to documentation problems.
Random variables	Definition of a random variable. Discrete random variables. Continuous random
	variables. Probability mass function. Density function. Distribution function. Mean,
	variance, calculation of probabilities and quantiles.

Probability distributions	Binomial distribution. Hypergeometric distribution. Negative binomial distribution.
	Normal distribution. Uniform distribution. Exponential distribution. Distributions
	associated to the normal distribution. Other distributions.

	Methodologies
Methodologies	Description
ICT practicals	In the practical classes the student will be introduced to the handling of the statistical software R. Computational tools for the
	resolution of problems will be shown and applied through the statistical analysis of data, either from simulated or real data.
Guest lecture /	Keynote speech will be given in which the teacher will explain, with the help of appropriate audiovisual media, the main
keynote speech	contents of the subject.
Supervised projects	Students will be proposed to develop a group work (2 to 4 people) consisting of the application of statistical and computational
	tools shown in class to a particular case study, described by real or simulated data. You can also perform a work consisting of
	the description of a case study in the field of communications and information sciences, in which the resolution of a real
	problem is carried out based on the application of statistical techniques. A review study on a specific topic of the subject or the
	software used may also be carried out. The works can be proposed by the teachers or by the students themselves (the
	proposals will be taken into account or not always according to the teacher's criteria).
Objective test	It will consist of a multiple-choice test on the contents taught in the course.
Case study	The statistical techniques taught in the course will be applied to solve exercises and real and simulated case studies in the
	field of digital information management.

	Personalized attention				
Methodologies	Description				
ICT practicals	There will be keynote lectures in which the teacher will explain, with the help of appropriate audiovisual media, the main				
Guest lecture /	contents of the subject, promoting the debate in class. In the particular case of students with academic dispensation, you can				
keynote speech	perform face-to-face and virtual tutorials (email, video conference), which allow the student to satisfactorily follow the subject.				

Assessment				
Methodologies	Competencies	Description	Qualification	
Supervised projects	B2 B4 B5 B6 B8 B9	These works will be carried out in groups of 2 to 5 people, applying statistics to real or	40	
	C1 C3 C5 C6 C8	simulated data, reviewing a topic on statistics or data science or even regarding a		
		specific application of statistics related to the field of communication and information		
		scienses.		

ICT practicals	A13 A22 B11 C2	The attendance and performance of the student in the practical classes will be	20
		evaluated, as well as the delivery of works related to the application of the statistical	
		software R.	
Objective test	A21 B1 B2	It will consist of 15 to 20 test questions with three possible answers.	40

Assessment comments

First chance evaluationThere will be a multiple-choice test of 10 to 20 questions that represents 40% of the grade. On the other hand, the continuous assessment will consist of attendance and / or delivery of practices related to learning and application of statistical software R for problem solving in the field of digital information management (20% of the overall grade), in addition to the delivery of one and / or several works of application of statistics for the resolution of case studies in digital documentation (alternatively may be tasks of revision or extension of the subject) which represents 40% of the final grade. Second chance evaluation

The evaluation will be done following the same procedure as in the first opportunity.

Early exam session

All these remarks are applied to the early exam session.

"No presentado" grade

For any of the two opportunities to pass the subject, the "NO PRESENTADO" grade will be given to the students who did non take the objective final test.

Students with recognition of part-time dedication and/or academic exemption of attendance

In the case of students with recognition of part-time dedication and/or academic exemption of attendance that decides not to attend classes, they will be evaluated in the two opportunities as the rest of the students who are in a similar situation.

Fraud in tests or evaluation activities will directly imply the failure grade "0" in the subject in the corresponding call, thus invalidating any grade obtained in all the evaluation activities for the extraordinary call.

Para axudar a conseguir unha contorna inmediata sostida e cumprir co obxectivo da acción número 5: ?Docencia e investigación saudable e sustentable ambiental e social? do "Plan de Acción Green Campus Ferrol:

A entrega dos traballos documentais que se realicen nesta materia:

- ? Solicitaranse en formato virtual e/ou soporte informático.
- ? Realizarase a través de Moodle, en formato dixital sen necesidade de imprimilos.
- ? En caso de ser necesario realizalos en papel:
- Non se empregarán plásticos.
- Realizaranse impresións a dobre cara.
- Empregarase papel reciclado.
- Evitarase a impresión de borradores.
- ? Débese de facer un uso sustentable dos recursos e a prevención de impactos negativos sobre o medio natural.
- ? Traballarase para identificar e modificar prexuízos e actitudes sexistas, e influirase na contorna para modificalos e fomentar valores de respecto e igualdade.
- ? Deberanse detectar situacións de discriminación e propoñeranse accións e medidas para corrixilas.
