Identifying Data				2021/22		
Subject (*)	Mechanics		Code	730G03026		
Study programme	Grao en Enxeñaría Mecánica					
Descriptors						
Cycle	Period	Year	Type	Credits		
Graduate	1st four-month period	Second	Obligatory	6		
Language	Spanish/Galician					
Teaching method	Face-to-face					
Prerequisites						
Department	Enxeñaría Naval e Industrial					
Coordinador	Lopez Diaz, Ana Jesus	E-mail	ana.xesus.lopez@udc.es			
Lecturers	Lopez Diaz, Ana Jesus	E-mail	ana.xesus.lopez@udc.es			
Web						
General description	<p>The general objective is the development of the skills and attitudes necessary for the application of the fundamental principles of mechanics to the resolution of problems of interest in engineering. It addresses the static, kinematic and dynamic of the material point, the systems and the rigid solid from the Newtonian formulation and from the Lagrangian formulation. This subject will contribute to the improvement of the capacity for analysis and construction of mathematical models that describe the effects of forces and movements on a wide variety of structures and machines incorporating physical hypotheses and appropriate mathematical approaches.</p>

Study programme competences	
Code	Study programme competences
A13	CR7 - Coñecemento dos principios de teoría de máquinas e mecanismos.
B1	CB01 - Que os estudantes demostren posuír e comprender coñecementos nunha área de estudio que parte da base da educación secundaria xeral e adoita encontrarse a un nivel que, áinda que se apoia en libros de texto avanzados, inclúe tamén algúns aspectos que implican coñecementos procedentes da vanguarda do seu campo de estudio
B2	CB02 - Que os estudantes saibam aplicar os seus coñecementos ao seu traballo ou vocación dunha forma profesional e posúan as competencias que adoitan demostrarse por medio da elaboración e defensa de argumentos e a resolución de problemas dentro da súa área de estudio

B3	CB03 - Que os estudiantes teñan a capacidade de reunir e interpretar datos relevantes (normalmente dentro da súa área de estudo) para emitiren xuízos que inclúan unha reflexión sobre temas relevantes de índole social, científica ou ética
B6	B3 - Ser capaz de concibir, deseñar ou poñer en práctica e adoptar un proceso substancial de investigación con rigor científico para resolver calquera problema formulado, así como de comunicar as súas conclusións ?e os coñecementos e razóns últimas que as sustentan? a un público tanto especializados como leigo dun xeito claro e sen ambigüidades
B7	B5 - Ser capaz de realizar unha análise crítica, avaliación e síntese de ideas novas e complexas
B8	B7 - Deseñar e realizar investigacións en ámbitos novos ou pouco coñecidos, con aplicación de técnicas de investigación (con metodoloxías tanto cuantitativas como cualitativas) en distintos contextos (ámbito público ou privado, con equipos homoxéneos ou multidisciplinares etc.) para identificar problemas e necesidades
B9	B8 - Adquirir unha formación metodolóxica que garanta o desenvolvemento de proxectos de investigación (de carácter cuantitativo e/ou cualitativo) cunha finalidade estratéxica e que contribúan a situarnos na vanguarda do coñecemento
C1	C3 - Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.
C2	C4 - Desenvolverse para o exercicio dunha cidadanía aberta, culta, crítica, comprometida, democrática e solidaria, capaz de analizar a realidade, diagnosticar problemas, formular e implantar solucións baseadas no coñecemento e orientadas ao ben común.
C5	C7 - Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.

Learning outcomes			
Learning outcomes		Study programme competences	
Know and understand the method of virtual works and the potential for their application in the resolution of static problems.	A13	B1 B2 B3 B6 B7 B8 B9	C1 C2 C5
Know and understand the kinematics of the solid, being able to apply the composition of movements.	A13	B1 B2 B3 B6 B7 B8 B9	C1 C2 C5
Know and understand the laws of dynamics, both in its vector and analytical formulation.	A13	B1 B2 B3 B6 B7 B8 B9	C1 C2 C5

Contents	
Topic	Sub-topic
Kinematics of the rigid solid. Static Dynamic of systems.	Fundamental laws of dynamics Rigid body movement in 2D Rigid body movement 3D body Equilibrium, stability and oscillations
Estática: método dos traballos virtuais e do potencial.	
Dinámica de sistemas: formulación vectorial e analítica.	

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A13 B1 B2 B3 C2 C5	21	42	63
Problem solving	A13 B1 B2 B3 C1 C2	21	42	63
Supervised projects	A13 B1 B2 B3 B6 B7 B8 B9 C1 C2 C5	3	9	12
Mixed objective/subjective test	A13 B1 B2 C2	10	0	10
Personalized attention		2	0	2

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Oral presentation complemented with the use of audio-visual media to develop the syllabus of the subject and make explanations and examples that allow the understanding of the principles of the subject to be able to apply them to practical examples.
Problem solving	Resolution of problems corresponding to the different subjects of the syllabus in order to understand the theoretical principles and know their practical application, comparing different methods highlighting the advantages of each.
Supervised projects	Individual student work designed to promote autonomous learning under the tutelage of the teacher. The theme is chosen to apply the knowledge developed in the subject but also includes aspects not addressed in the lectures to develop the capacity for research and self-learning.
Mixed objective/subjective test	They are written tests that consist of questions of different types (short answer, essay, exercises or problems) about the contents of the subject. The number of tests will be specified in the evaluation section.

Personalized attention	
Methodologies	Description
Mixed objective/subjective test	All students are recommended to attend tutorials to clarify issues related to both theory and problem classes. In the case of problems, it is also recommended that they analyze in detail the problems solved and that they try to solve those that are left unsolved, consulting any questions or difficulties.
Guest lecture / keynote speech	In supervised work there is a duty to attend a minimum of interviews with the teacher. These interviews aim to define its content and scope, as well as check its progress.
Problem solving	Students with academic exemption may request the tutoring at a different time from that published on the UDC website.
Supervised projects	

Assessment			
Methodologies	Competencies	Description	Qualification
Mixed objective/subjective test	A13 B1 B2 C2	The four mixed tests will be of continuous evaluation, so the contents of all the previous ones will be included in each test. The weight of each test will be 10%, 20%, 30% and 40% of the total of the mixed test. The dates of these late-night tests appear on the course planning calendar published by the school.	90

Supervised projects	A13 B1 B2 B3 B6 B7 B8 B9 C1 C2 C5	The work is of an individual nature, so originality will be rewarded and the copying of results or the method used will be penalized. Each student must deliver their report within the established period and attend the mandatory tutorials on the established calendar. If these conditions are not met, the work will be scored as 0. The delivery will be made through the UDC online training platform.	10
Others			

Assessment comments

Only students who do not attend any of the mixed tests will be classified as NOT PRESENTED.

The academic exemption is admitted in the terms established in point 5 of article 7 of the "Norm that regulates the regime of dedication to study and the permanence and progression of undergraduate and master's students at the University of A Coruña", approved by the Social Council on 05/04/2017. Therefore, students with academic dispensation late-night evaluated at the first opportunity using the same system as the rest of the students, that is, supervised work 20% + 80% mixed test.

In the 2nd opportunity, continuous evaluation will not be possible, so the grade of the work will be that of the 1st opportunities and the mixed test will be a single mixed test on the date indicated for the final test in the exam calendar of the school.

Recommendations**Subjects that it is recommended to have taken before**

Calculus /730G03001

Physics I /730G03003

Linear Algebra/730G03006

Physics II/730G03009

Subjects that are recommended to be taken simultaneously

Differential Equations/730G03011

Fundamentals of Electricity/730G03012

Thermodynamics /730G03014

Subjects that continue the syllabus

Strength of Materials/730G03013

Theory of Machines/730G03019

Machine Components/730G03029

Other comments

Coñecementos básicos para aboradr con éxito esta materia:Matemáticas

Vectores:

compoñentes dun vector, módulo dun vector;

vector, operacións con vectores (produto escalar, produto vectorial, producto mixto)

Trigonometría

Cálculo dun determinante

Derivar e integrar as funcións elementais

Ecuacións diferenciais de segunda orde con

coeficientes constantes

Calcular os

autovalores dunha matriz

Física

Diferenza entre magnitudes escalares e

vectoriais.

Coordenadas polares, cilíndricas e esféricas.

Vectores de posición, velocidade e aceleración

dun punto material.

Diagrama do sólido libre

Resultante e momento resultante dun sistema de

forzas

Centro de masas dun corpo xeométrico sinxelo

Forzas conservativas

Calcular o potencial a partir dunha forza e

viceversa

Oscilador harmónico libre, amortecido e forzado

Movemento relativo dunha masa puntual

Cálculo das magnitudes dinámicas (cantidad de
movemento, momento cinético, enerxía ?)

nunha masa puntual e un sistema de masas puntuais.Dimensión de Xénero- Segundo se recolle nas distintas normativas de aplicación para a docencia universitaria deberase incorporar a perspectiva de xénero nesta materia.- Traballaráse para identificar e modificar prexuízos e actitudes sexistas, e influirase na contorna para modificalos e fomentar valores de respecto e igualdade.- Deberanse detectar situacións de discriminación por razón de xénero e proporanse accións e medidas para corrixilas.- Facilitarase a plena integración do alumnado que por razón físicas, sensoriais, psíquicas ou socioculturais, experimenten dificultades a un acceso axeitado, igualitario e proveitoso á vida universitaria.
