General description	This subject studies the organization	, structure and function	of the human gend	me, deep	ening the knowledge of human
	genetic diseases and identification of individuals. Current genomic analysis techniques for the study, isolation and ma				or the study, isolation and mappir
	of genes and molecular diagnosis are	of genes and molecular diagnosis are addressed and discussed.			

	Study programme competences
Code	Study programme competences
A1	Skills of working in a sure way in the laboratories knowing operation handbooks and actions to avoid incidents of risk.
A6	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A8	Skills of having an integrated view of the previously acquired knowledge about Molecular and Cellular Biology and Genetics, with an
	interdisciplinary approach and experimental work.
A11	Skills of understanding the structure, dynamics and evolution of genomes and to apply tools necessary to his study.
A12	Skills to understand, detect and analyze the genetic variation, knowing genotoxicity processes and methodologies for its evaluation, as
	well as carrying out diagnosis and genetic risk studies.
B1	Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.
В3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions
	and to prepare reasoned reports on scientific and biotechnological questions
B5	Ability to draft, represent, analyze, interpret and present technical documentation and relevant data in the field of the branch of knowledge
	of the master's degree in the native language and at least in another International diffusion language.
В6	Skills of team work: that are able to keep efficient interpersonal relationships in an interdisciplinary and international work context, with
	respect for the cultural diversity.
B8	Critical reasoning skills and ethical commitment with the society: sensitivity in front of bioethical problems and to the ones related to the
	natural resource conservation
C1	Ability to express oneself correctly, both orally and in writing, in the official languages of the autonomous community
C9	Ability to manage times and resources: developing plans, prioritizing activities, identifying critical points, establishing goals and
	accomplishing them.

Learning outcomes					
Learning outcomes			amme		
			ces		
Capacidade de realizar análise xenéticos tanto a nivel molecular como na identificación de enfermedades xenéticas mediante	AR1	BR1	CC1		
estudos familiares.	AR6	BR3	CC9		
Capacidade de realizar diagnóstico xenético.		BR5

Contents				
Topic	Sub-topic			
Lecture 1. THE HUMAN GENOME: SEQUENCE AND	Functional elements			
/ARIATION	Protein-coding genes			
	Non-coding, RNA-only genes			
	Repetitive elements			
	Mitochondrial genome			
	Genomic variability			
	Epigenetics			
LECTURE 3. CHROMOSOMES AND CLINICAL	The human karyotype			
SYNDROMES	Mitotic and meiotic alterations: non-disyunction			
	Changes in Number and structure of the chromosomes			
	Mosaics			
LECTURE 3. GENES AND CANCER	Oncogenes and tumor supressor genes			
	Germline mutations: familiar cancer			
	Somatic cancer genetics			
LECTURE 4. FORENSIC GENETICS	DNA fingerprinting			
ECTURE 5. EVOLTION OF HUMAN POPULATIONS	Genetic diversity			
	Mitochondial and nuclear inheritance			
ECTURE 6. GENETIC DISEASES	Familiar studies			
	Mendelian inheritance			
	Multiple alleles			
	Complex inheritance			
	Anticipation, expressivity, penetrance, mosaicism, mitochondrial inheritance and			
	dynamic mutations			
	hEREDABILITY			
_ABORATORY PRACTICES	1- Pedigrees			
	2- Genetic polymorphism analyses			
	3- Phylogenies

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Guest lecture /	In each class, contents related to different aspects of the syllabus will be exposed. The teacher will explain the fundamental
keynote speech	contents of each topic and indicate the activities associated with it.
Laboratory practice	The practical classes will consist of an explanation on the part of the professor on the conceptual bases and the objectives to
	reach and the development of tasks on the part of the student. It is intended that the student has maximum autonomy,
	facilitating means and guidance.
Mixed	Written test in which any aspect addressed in both theoretical and practical teaching will be discussed.
objective/subjective	
test	
Practical test:	A written test will be carried out to evaluate the knowledge acquired during the laboratory practices
Oral presentation	Students will read one or two recent articles on genetic diseases and prepare a presentation that they will defend in a time of
	10-12 minutes. The consulted bibliography will be valued, synthesis capacity, oral expression and argumentation.

	Personalized attention				
Methodologies	Description				
Mixed	Students: will request tutoring and will be attended via email or TEAMS.				
objective/subjective					
test	CONTINXENCE PLAN: in case of confinement, students will request tuition and it will be done via TEAMS or email

Oral presentation					
Practical test:					

		Assessment	
Methodologies	Competencies	Description	Qualification
Mixed	A1 A5 A7 A11 B1 B2	The domain of theoretical and practical concepts will be valued, clarity in the	40
objective/subjective	B3 B4 B6 B7 B8 B9	explanations, capacity to relate and integrate the information received treated in the	
test	B10 B12 B13 C1 C3	magisterial sessions and in the laboratory and bioinformatics practices, and capacity	
	C4 C6 C7 C8	to solve questions and problems.	
Laboratory practice	A1 A6 B3 B5 B6 C1	It will be valued the knowledge about the meaning of the tasks carried out, and the	15
	C9	interpretation of the results obtained.	
Oral presentation	A1 B1 B2 B3 B4 B5	Students will prepare a 10-minute presentation on a topic related to any of the content	30
	B6 B7 B8 B9 B10 B11	covered in the subject.	
	B12 B13 C1 C3 C4		
	C6 C7 C8		

Practical test:	A1 A5 A7 A11 B1 B2	The knowledge acquired during the laboratory practices will be valued.	15
	B3 B4 B5 B6 B8 B9		
	B10 B12 B13 C1 C3		
	C4 C6 C7 C8		

## **Assessment comments**

Laboratory practices are mandatory. To pass the subject, the student must obtain at least 50% of the score assigned to the mixed test and another 50% of that of the laboratory practices. It will be considered NOT PRESENTED when the student has not participated in more than 20% of the scheduled assessable activities. This criterion applies to the June call. In the July call, to obtain the grade NOT PRESENTED, it will be enough to not appear for the objective tests (theory and practical exams). For the evaluation of the July call, the student, in addition to the theory and practical exams, must present the power point presentation of the oral presentation. In the event that this activity was already evaluated in the previous call, the grade obtained will remain for July. For students with part-time dedication and exemption from attendance, the teacher will adopt the measures that he deems appropriate to avoid damaging her grade (flexibility in the delivery dates of the assessable activities). Instead of the oral presentation, these students will make a 2-3 page summary that must be delivered in pdf to the teacher for evaluation.

The fraudulent performance of the tests or evaluation activities will directly imply the application of the current regulations of the UDC

## Other comments

Attendance at the master classes enables the treatment of doubts or questions that may arise in the course of the explanations, facilitating the understanding of the topics. The study must contemplate the habitual consultation of at least the recommended bibliography. Study and group work favors understanding and develops a critical spirit. Doubts and difficulties raised by any aspect of the subject must be resolved as soon as possible, raising them in face-to-face classes or attending individualized tutorials. Given that part of the recommended bibliography for this subject is in English, it is advisable to have knowledge of this language, at least at the level of comprehension of written texts. Green Campus Program Green Campus Program of the Faculty of SciencesTo help achieve a sustainable environment and comply with point 6 of the "Environmental Declaration of the Faculty of Sciences (2020)", the documentary works carried out in this matter:to. They will be requested mainly in virtual format and computer support.b. If done on paper:- Plastics will not be used- They will be printed on both sides.- Recycled paper will be used- Drafts will be avoided.

(\*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
