Knowledge management in biolog	gy is the field of	bioinformatics, and	d includes both the form	alization of the information						
obtained and its organization in a	ppropriate datab	pases, the extraction	on of relationships betwe	een the scattered information,						
the modeling of biological process	ses and the gen	eration of hypothes	ses to support new expe	erimental approaches. From a						
technical standpoint, bioinformatic	cs using comput	tational methods (t	he proper method devel	lopment in this area is often						
called computational biology) and	d receives contril	butions from mathe	ematics, physics and co	mputer engineering. However,						
from the point of view of the object	ctives, bioinform	atics is a branch of	f biology, as they can be	e biochemistry or microbiology.						
This interdisciplinary nature of bio	oinformatics lies	both its strength a	nd its weakness: first, th	ne application of ideas brought						
from other fields consistently prod	duces spectacula	ar advances; but o	n the other hand, it is di	fficult to develop appropriate						
training programs.										
To realize the importance of bioin	formatics in mo	dern biology, it ma	y enough to say that the	e method most cited publications						
in this area is Blast, a computatio	nal method that	searches and iden	tifies sequences of prot	teins and nucleic acids in						
databases: ie more technical operations is performed by computational biologists, and no experimental. In fact, the										
interpretation of any experiment in biology requires complex, almost inevitably, bioinformatic analysis, which is especially										
obvious in massive experiments.

	Study programme competences / results
Code	Study programme competences / results
А3	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A9	Skills of understanding the structure and dynamics of proteins to individual and proteomic level, as well as the techniques that are
	necessary to analyze them and to study their interactions with other biomolecules.
A11	Skills of understanding the structure, dynamics and evolution of genomes and to apply tools necessary to his study.
B1	Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.
B2	Skills of decision making for the problem solving: that are able to apply theoretical knowledges and practical acquired in the formulation of
	biological problems and the looking for solutions.
В3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions
	and to prepare reasoned reports on scientific and biotechnological questions
В9	Skills of preparation, show and defense of a work.
C3	Using ICT in working contexts and lifelong learning.
C6	Acquiring skills for healthy lifestyles, and healthy habits and routines.
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.
C9	Ability to manage times and resources: developing plans, prioritizing activities, identifying critical points, establishing goals and accomplishing them.

Learning outcomes					
Learning outcomes	Study	Study programme			
				Know access to Channels Bioinformatics Web Resources	
		BR9			
Understand and manage properly the area of Bioinformatics	AR3	BR3	ССЗ		
		BR9			
Being able to function independently to find information about the different programs and their changeable parameters and	AR3	BR2	CC3		
understand the impact on the results of the analysis		BR3	CC6		
		BR9	CC9		
To have bioinformatics knowledge of how to make a prediction of the onedimensional characteristics of a protein		BR1	ССЗ		
	AR9	BR2	CC8		
	AR11	BR3			
To be able to perform a simple prediction of the three dimensional structure of a protein based on available data and programs	AR3	BR1	CC3		
on the Web		BR2	CC8		
		BR3	CC9		
Learn the basic methods of molecular simulation and how they are used for the study of proteins	AR3	BR1	CC3		
		BR2	CC8		
		BR3			

	Contents
Topic	Sub-topic
Bioinformatics	Web Resources and Databases in molecular biology. Analysis and comparison of
	sequences.
	Sequence alignment. Location of motives. Search of genes. annotation of
	genes. Browsers genome project. Examples of applications. Data analysis.
Modeling of Biomolecules	Prediction of the characteristics of the protein structure. Obtaining three-dimensional
	models.
	Homology modeling. Modeling by threading or by remote homology design.
	Ab initio methods. Evaluation of the prediction methods.

Methodologies						
Methodologies	Description					
Guest lecture /	Oral presentation complemented by the use of audiovisual media for the purpose of transmitting knowledge and facilitate					
keynote speech	learning. The student will be able to attend the face-to-face sessions synchronously through TEAMS. Sessions will be recorded					
	for viewing asynchronously.					
Seminar	Working technique that aims to make powerpoint and word documents on a topic proposed by the teacher.					
Case study	Methodology that allows students to learn effectively through practical activities (demonstrations, simulations, etc.) the theory					
	of a field of knowledge through the use of information technology and communications.					

	Personalized attention
Methodologies	Description
Seminar	The personal attention that is described in relation to these methodologies are conceived as moments of classroom student
Case study	work with teacher through TEAMS, this involve mandatory participation for the student.
	The manner and time in which it was held is indicated in relation to each activity along the course according to the work plan of
	the course

Assessment							
Methodologies	logies Competencies / Description						
	Results						
Guest lecture /	A3 A9 A11	A test will be realized to assess the knowledge acquired in the course of lectures.	45				
keynote speech							
		With this methodology the A5, B2 skillls will be assessed					
Seminar	B3 B9 C6 C8 C9	The seminar will be evaluated by taking into account the ability to extract the most	25				
		relevant information obtained for the student and the ability to expose it.					
		Whit this methodology B1, B3 and B9 competencies will be evaluated					
Case study	B1 B2 C3 C9	The response bulletins made by students will be assessed.	30				
		With this methodology the A5 and B2 competencies will be assessed					

Assessment comments

Students presented in the first opportunity of June will be eligible to get honours.

In the second opportunity or in the early call, students will only be able to repeat the exam corresponding to the evaluation of the Master Session and deliver the case study response bulletins, if they did not deliver them at the first opportunity, specifying with the corresponding teacher the date of delivery.

Plagiarism:

In any submission in which plagiarism is detected, the submission will be valued with a zero. Plagiarism in the objective test will be sanctioned in accordance with current university regulations

Other comments

Green Campus Program of Facultade de Ciencias To help achieve a sustainable immediate environment and comply with point 6 of the

"Declaración Ambiental da Facultade de Ciencias (2020)", the documentary

works carried out in this subject:a. They will be requested mainly in virtual format and computer support. b. If done on paper: - Plastics will not be used. - Double-sided prints will be made. - Recycled paper will be used. - The realization of drafts will be avoided.
