| General description | This subject tackles the foundations of the main technical spectroscopic and diffractometric techniques for characterisation of nanomaterials and nanostrutures. It seeks the acquisition of the necessary basic knowledge, skills and competences associated to the understanding and application of the mentioned techniques. |        |                               |           |

## Study programme competences

| Code | Study programme competences                                                                                                                                                                                                                                               |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A1   | CE1 - Comprender los conceptos, principios, teorías y hechos fundamentales relacionados con la Nanociencia y Nanotecnología.                                                                                                                                              |
| A2   | CE2 - Aplicar los conceptos, principios, teorías y hechos fundamentales relacionados con la Nanociencia y Nanotecnología a la resolución de problemas de naturaleza cuantitativa o cualitativa.                                                                           |
| A3   | CE3 - Reconocer y analizar problemas físicos, químicos, matemáticos, biológicos en el ámbito de la Nanociencia y Nanotecnología, así como plantear respuestas o trabajos adecuados para su resolución, incluyendo el uso de fuentes bibliográficas.                       |
| A5   | CE5 - Conocer los rasgos estructurales de los nanomateriales, incluyendo las principales técnicas para su identificación y caracterización                                                                                                                                |
| A7   | CE7 - Interpretar los datos obtenidos mediante medidas experimentales y simulaciones, incluyendo el uso de herramientas informáticas, identificar su significado y relacionarlos con las teorías químicas, físicas o biológicas apropiadas.                               |
| B2   | CB2 - Que los estudiantes sepan aplicar sus conocimientos a su trabajo o vocación de una forma profesional y posean las competencias que suelen demostrarse por medio de la elaboración y defensa de argumentos y la resolución de problemas dentro de su área de estudio |
| B3   | CB3 - Que los estudiantes tengan la capacidad de reunir e interpretar datos relevantes (normalmente dentro de su área de estudio) para emitir juicios que incluyan una reflexión sobre temas relevantes de índole social, científica o ética                              |
| B6   | CG1 - Aprender a aprender                                                                                                                                                                                                                                                 |
| B7   | CG2 - Resolver problemas de forma efectiva.                                                                                                                                                                                                                               |
| C2   | CT2 - Dominar la expresión y la comprensión de forma oral y escrita de un idioma extranjero                                                                                                                                                                               |
| C3   | CT3 - Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de su vida                                                                          |
| C8   | CT8 - Valorar la importancia que tiene la investigación, la innovación y el desarrollo tecnológico en el avance socioeconómico y cultural de la sociedad                                                                                                                  |

## Learning outcomes

| Learning outcomes                                                                                                        | Study programme competences |          |    |

|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Methodologies                   | Description                                                                                                                                                                                                                                                                   |
| Seminar                         | This activity is planned to be carried out in groups as reduced as possible, with the aim to deepen in a dynamic and argumentative way in the distinct topics. The success of this methodology depends on the active participation of the students.                           |
| Mixed objective/subjective test | Combination of different types of questions, tests and problems, brief answer or short essay, evaluating knowledge, capacity of reasoning and critical ability.                                                                                                               |
| Oral presentation               | Oral presentation of a case taken from the case studies activity, or a similar one proposed by the lecturer. The activity includes debate on the subject that is presented.                                                                                                   |
| Multiple-choice questions       | Ao longo do cuadrimestre, a medida que se avanza na materia, vanse engadindo tests no campus virtual. O alumnado debe responder a estos tests, que computan para a avaliación, nun tempo limitado e breve. O obxectivo e fomentar o estudo paulatino e progresivo da materia. |
| Guest lecture / keynote speech  | Lectures with audiovisual or blackboard support in which the fundamental aspects of the subject are put forward, with possibility of participation of the students.                                                                                                           |

| Personalized attention |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Oral presentation      | It aims to guide to the students in the understanding of the problem posed and of the possible strategies to solve it. It will be jointly scheduled between lecturers and students, as needed. It will be carried out at lecturers' office. Will be distributed in 12 sessions of 15 min along the semester.<br><br>The students with recognition of part time dedication and exemption of assistance will have to assist to at least a personal tutorial for each seminar (=8 tutorials) and one out of two case studies (=4 tutorials), previously scheduled in agreement with the lecturers. |

| Multiple-choice questions       | A2 A3 A5 B2 B3 B6<br>B7 C2 C3 | Tests de resposta múltiple realizados a través do campus virtual. Valórase a adquisición de coñecementos sobre a materia e a capacidade de responder cuestións sobre a mesma nun tempo limitado, poñendo de manifesto claridade nos conceptos. Estos test non se consideran recuperables na segunda oportunidade. | 20            |

#### Assessment comments

The aim is to evaluate the acquisition of knowledge, critical capacity, synthesis, comparison, elaboration, application and originality of the students. In order to make the best use of the subject, students must attend all face-to-face activities.

First opportunity. In order for the case study and oral presentation activities to be taken into account, a minimum grade of 4.0/10 must be obtained in each of the two parts of the mixed test. The final grade is obtained by applying the established percentages and the previously established restrictions.

Second opportunity. The mixed test is repeated, since the activities related to the multiple-choice test (which reflects the continuity and progressiveness in the acquisition of knowledge) and the oral presentation (since it is not possible to debate it with the presence of all the students) are considered unrepeatable. Thus, in this second opportunity, the mixed test becomes worth 80% of the final grade (half for each of its parts), which is obtained by applying the established percentages and the previously established restrictions.

In any of both opportunities, if a minimum grade of 4.0/10 is obtained in each of the parts of the mixed test, the subject will be considered as failed even if the final grade, calculated according to the corresponding percentages, is equal or higher than 5/10. In this case, the final grade will be 4.5/10.

Honors: if there are several students with the same grade who are eligible for the MH, and the number of MH available is less than the number of students, they will be called to a written test. Students evaluated in the second opportunity will only be eligible for the MH if the number of MHs was not covered in its totality in the first opportunity.

Grade of "not presented": applies to students who had participated in evaluable activities that represent less (

#### Recommendations

##### Subjects that it is recommended to have taken before

Advanced Crystallography/610G04042

Fundamentals of Quantum Theory/610G04015

Physics: Electricity and Magnetism/610G04007

Chemistry: Structure and Bonding/610G04005

Physics: Mechanics and Waves/610G04002

##### Subjects that are recommended to be taken simultaneously

Synthesis and Preparation of Nanomaterials/610G04020

Instrumental Analysis/610G04014

##### Subjects that continue the syllabus

Techniques of Characterisation of Nanomaterials 2/610G04030

Techniques of Characterisation of Nanomaterials 1/610G04025

Surface Science/610G04021

Solid State/610G04022

#### Other comments

- It is recommended to review assiduously the theoretical concepts introduced in the maximum lessons, as well as to solve simultaneously the questions in exercises that will be proposed.- It is not advisable to study only by class notes. It is recommended to elaborate your own material by completing the notes.- It is strongly recommended to make use of the tutorial hours to clarify doubts and deepen our knowledge.- Green Campus Program of the Faculty of Science. To help achieve an immediate sustainable environment and comply with point 6 of the "Environmental Declaration of the Faculty of Science (2020)", the work of this subject will be requested in virtual format and computer support.
