General description	This subject is intended to maste	er current Software Engineeri	ng solutions for the design	of applications and systems, in th	
	architectural level. This involves:				
	- Knowledge of the most typical software architectures and their properties;				
	- Study of non-functional requirements and their relationship to software architecture;				
	- Development and/or study of a	ctual systems.			

	Study programme competences / results
Code	Study programme competences / results
A25	Capacidade para desenvolver, manter e avaliar servizos e sistemas sóftware que satisfagan todos os requisitos do usuario e se
	comporten de forma fiable e eficiente, sexan accesibles de desenvolver e manter, e cumpran normas de calidade, aplicando as teorías,
	principios, métodos e prácticas da enxeñaría do sóftware.
A27	Capacidade de dar solución a problemas de integración en función das estratexias, estándares e tecnoloxías dispoñibles.
A28	Capacidade de identificar e analizar problemas, e deseñar, desenvolver, implementar, verificar e documentar solucións sóftware sobre a
	base dun coñecemento adecuado das teorías, modelos e técnicas actuais.
B1	Capacidade de resolución de problemas
B2	Traballo en equipo
B3	Capacidade de análise e síntese
B4	Capacidade para organizar e planificar
C3	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e
	para a aprendizaxe ao longo da súa vida.
C4	Desenvolverse para o exercicio dunha cidadanía aberta, culta, crítica, comprometida, democrática e solidaria, capaz de analizar a
	realidade, diagnosticar problemas, formular e implantar solucións baseadas no coñecemento e orientadas ao ben común.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.

Learning outcomes					
Learning outcomes	Study programme				
	con	npetenc	es /		
		results			
Learn Software Engineering concepts and techniques.					
Understand and identify the typical problems of software architectures and their contexts.		B2	C4		
	A27	B3	C6		
	A28				

Define and document specifications, models, and architectural components of an application, according to their requirements,	A28	B1]
so as to favour their maintenance and extensibility.		B2		
		B3		
		B4		
Proficient use of modeling languages.	A28			
Use specific tools for defining and building applications.			C3	
Validate the architecture of a system against its requirements.	A25			
Synthesize success stories.	A25	B3	C4	1
			C6

Personalized attention		5	0	5

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Guest lecture /	Lectures in which the notions and concepts of the field are presented, using different kinds of resources such as board, slides,
keynote speech	or material provided beforehand by the teacher by means of a virtual platform (Moodle).
Document analysis	Reading and understanding task for the student, in which they will manage different resources provided or pointed to.
	Materials will be selected to promote a better understanding of lectures, to generate debate during discussion sessions, or to
	assist in carrying out practical (un)supervised work.
Directed discussion	Constructive debate, led by the teacher but participated by the whole class group, on different issues presented in lectures.
	The aim of these debates is to deepen the understanding and acquisition of theoretical concepts, and the development of
	critical and analytical skills.
Laboratory practice	Small projects designed so that the students can put in practice the theoretical knowledge as they acquire it. These projects
	wil be dimensioned to be undertaken by groups of students. The size of these gropus will be determined depending on the
	number of students enrolled in the course.
Supervised projects	Specific report or essays to be developed by students, either in groups or individually. These reports will be presented either at
	small group sessions or during personalized tutoring sessions.
Objective test	Final examination in which students must prove the knowledge they have acquired. Students are expected to show their skills
	both on a theoretical level (by answering questions similar to those posed during lectures and discussion sessions), and a
	practical level (by solving problems and exercises similar to those proposed during lab sessions and small projects).

	Personalized attention			
Methodologies	Description			
Laboratory practice	The personalized attention to students involvese not only the well-known tutoring sessions, but also the following actions:			
Supervised projects				
	- Guidance and monitoring of the work done in the projects/essays/reports and other practices.			
	- Evaluation of the involvement and participation in discussion sessions.			

Assessment

Methodologies	Competencies /	Description	Qualification
	Results		
Laboratory practice	A25 A27 A28 B1 B2	Evaluation of the practices (small projects). Even though these practices are	40
	B4 C4 C6	conducted in groups, two components are considered in the assessment of a student's	
		work:	
		- Assessment of group work, which takes into account the degree of coordination and	
		collaboration among its members.	
		- Personal assessment, which evaluates the specific contribution of one student to the	
		group.	
		The aspects that will be considered to evaluate these projects are:	
		- Accuracy in achieving the objectives using the proposed techniques.	
		- Understanding of the concepts involved.	
		- Originality of the proposals.	
		- Responsibility in delivering the project results in due time, as well as proper use of	
		the established delivery means.	
Objective test	A27 A28 B1 B3 C6	Written test divided into two parts: theoretical questions, and modeling of a problem.	40
Supervised projects	A27 A28 B1 B3 B4 C3	The following aspects will be evaluated:	20
	C6		
		- Knowledge and understanding of presented contents.	
		- Knowledge and understanding of the theoretical and practical concepts of the subject	
		involved.	

Assessment comments

Students will need to show balance in their performance on the final examination and the lab practices (group projects). A balance of at least 50% of the corresponding qualification weight will be required on both aspects.

In the second chance evaluation, the objective test can include a laboratory evaluation for those people which do not reach 50% of the laboratory practice grade during the semester.

In compliance with the academic rules at UDC that apply to part-time students, physical presence in the classroom/laboratory will not be regarded as qualification element. That is to say, students may officially apply to be dismissed from attending lectures and laboratory practices. All in all, part-time students will still need to comply with deadlines established for supervised projects and laboratory projects, since these will be announced in the subject webpage, and the projects will always be handed-in electronically.
