Identifying Data				2022/23
Subject (*)	Structural Design	Code	630519002	
Study programme	Mestrado Universitario en Arquitectura			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	Yearly	First	Obligatory	6
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Construcións e Estruturas Arquitectónicas, Cívís e AeronáuticasEnxeñaría Civil			
Coordinador	Estévez Cimadevila, Francisco Javier	E-mail	javier.estevezc@udc.es	
Lecturers	Estévez Cimadevila, Francisco Javier Martín Gutiérrez, Emilio Suárez Riestra, Félix Leandro	E-mail	javier.estevezc@udc.es emilio.martin@udc.es felix.suarez@udc.es	
Web				
General description	The subject addresses the integration of structural design within the architectural projection process, as well as the analysis of both graphic and written documentation that integrates the structure execution project. This analysis is carried out through the design of structures with the materials normally used, concrete, steel and timber, as well as the surface and deep foundation elements present in the building.			

Study programme competences / results	
Code	Study programme competences / results
A1	Ability to conceive, calculate, design and integrate in buildings and urban developments and implement: Building structures (T)
A9	Ability to preserve, restore and renovate the built heritage (T)
A12	Development, presentation and public review, once the student has all credits, undergraduate and master's degree, of an original exercise done individually, before a university jury including at least one prestigious professional proposed by the professional associations. The exercise will consist of a comprehensive architectural design of professional nature in which all the skills acquired in the degree and master's degree, are developed to an extent of demonstrating sufficiency to guarantee the full execution of the construction works according to technical and administrative regulations (T)
B1	Students have the learning skills that enable them to continue studying in a way that will be largely self-directed or autonomous
B2	Have knowledge and understanding that provide a basis or opportunity for originality in developing and / or applying ideas, often in a research context
B3	Students can apply acquired knowledge and ability to solve problems in new or unfamiliar environments within broader or multidisciplinary contexts related to their field of study
B4	Students are able to integrate knowledge and handle complexity and formulate judgements based on information that is incomplete or limited, including reflection on social and ethical responsibilities linked to the application of their knowledge and judgements
B5	Students can communicate their conclusions and the knowledge and the rationale supporting them to specialists and non-specialists in a clear and unambiguous way
B6	Knowing the methods of research and preparation of construction projects
B7	Creating architectural designs that meet both aesthetic and technical requirements and the needs of users within the limits imposed by cost factors and building regulations
B8	"Understanding the architectural profession and its role in society, in particular, elaborating projects that take into account the social factors "
C1	Adequate oral and written expression in the official languages.
C3	Using ICT in working contexts and lifelong learning.
C4	Exercising an open, educated, critical, committed, democratic and caring citizenship, being able to analyse facts, diagnose problems, formulate and implement solutions based on knowledge and solutions for the common good
C5	Understanding the importance of entrepreneurial culture and the useful means for enterprising people.
C6	Critically evaluate the knowledge, technology and information available to solve the problems they must face

C7	Assuming as professionals and citizens the importance of learning throughout life
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Unha parte da actividade presencial desenvólvese a través do método expositivo fomentando, con todo, involucrar ao alumno na etapa de desenvolvemento do tema exposto, proporcionándolle a oportunidade para formular preguntas e expresar ideas, conducíndolle desta maneira , por influencia indirecta, ao proceso de aprendizaxe. Dado o tipo de materia, a exposición realízase cunha ampla utilización de medios audiovisuais.

Supervised projects	<p>A realización de traballos tutelados constitúe nesta materia unha metodoloxía básica e fundamental para a adecuada formación do alumno. Iso é así pois permite enfrontarse ás situacións reais que formarán parte do seu exercicio profesional, debendo coñecer o proceso e as implicacións que ten a toma de decisións sobre o proxecto estrutural dunha obra de arquitectura.</p> <p>Esta metodoloxía permite non só a consolidación e aclaración dos conceptos adquiridos nas sesións maxistras, senón tamén implementar os coñecementos que se van achegando adquirindo así unha práctica de manexo dos mesmos.</p>
Workshop	<p>A materia participa no Taller PFM, onde se integran igualmente Proxecto de Construción, Proxecto de Instalacións, Proxectos Avanzados e Instrumentos de Intervención urbanística . O taller enténdese como un espazo de traballo e intercambio concibido para facilitar a confluencia dos contidos das diferentes materias en torno ao proxecto arquitectónico, e por tanto baséase na integración multidisciplinar sobre a resolución de casos prácticos.</p>

Personalized attention

Methodologies	Description
Workshop Guest lecture / keynote speech Supervised projects	<p>Unha metodoloxía orientada cara á aprendizaxe require a consideración das singularidades que distancian a uns alumnos doutros dentro dun mesmo grupo, en termos de formación previa, posibles carencias, actitudes e aptitudes, expectativas e motivacións. Esta cuestión adquire maior transcendencia no desenvolvemento dos traballos tutelados e os proxectos propostos a nivel de taller, cuxa metodoloxía só adquire sentido se se produce un contacto regular e xornal co profesorado a fin de optimizar e no seu caso reconducir as actividades en curso.</p>

Assessment

Methodologies	Competencies / Results	Description	Qualification
Workshop	A1 A9 A12 B1 B2 B3 B4 B5 B6 B7 B8 C1 C3 C4 C6 C7	Valoraranse os resultados obtidos no taller tenendo en cuenta o seu seguimento por parte do alumno, a complexidade da solución estrutural, a súa adecuación á proposta arquitectónica, así como o seu desenvolvemento tanto a nivel de cálculo como gráfico.	20
Supervised projects	A1 A9 A12 B1 B2 B3 B4 B5 B7 B8 C1 C3 C4 C5 C6 C7	Ditas probas contemplarán o deseño e o desenvolvemento de traballos vinculados ao proxecto de estruturas de edificación.	80

Assessment comments

<p>A avaliación para a primeira oportunidade correspóndese co indicado, onde a cualificación final é o resultado da valoración dos traballos tutelados (80% da cualificación final) e dos resultados obtidos no taller (20% da cualificación final). Na segunda oportunidade e na convocatoria adiantada a cualificación final é o resultado do exame no que o alumno terá que desenvolver no período indicado o deseño, predimensionado e grafiado da estrutura proposta. Este exame computará na cualificación final un 80%, en equivalencia á valoración dos traballos tutelados da primeira oportunidade. O 20% restante da cualificación corresponderá aos resultados obtidos no desenvolvemento do taller. Aos alumnos que acrediten matrícula parcial aplicaráselles idénticas condicións ás descritas para o resto dos alumnos coa única excepción de que a asistencia mínima establécese nun 50%. Atendendo ao artigo 14 das NORMAS DE AVALIACIÓN, REVISIÓN E RECLAMACIÓN DÁS CUALIFICACIÓNS DÚAS ESTUDOS DE GRAO E MESTRADO UNIVERSITARIO da UDC, se se detectase a comisión de fraude nas probas de avaliación o alumno suspenderá a convocatoria da materia (ambas as oportunidades) coa cualificación de 0.</p>
