General description	The course focuses on the lands	cape resulting	from human interv	entions within its habita	at. The landscape concept implies	
	the existence of a cultural experi-	ence; the lands	cape must be inte	rpreted or experienced	. Only through the knowledge of	
	the relationships that are established between landscape and experience, as well as those of the agents causing these					
	relationships, will it be possible to understand the existing landscape and its creative renewal.					
Campos Venuti defined the habitat as ?the whole system, complex and extensive, which in society is foun				in society is found above and		
	below the simple dwelling (?). The habitat model must encompass as a whole all those environmental structures,				nvironmental structures, artificial	
	and natural, which in cities and the countryside host the development of life in common and determine its					
	character?(Campos Venuti, 1981: 177).					
	The course tries to introduce the student to the knowledge of the elements that form the landscape and the relation					
	that are established between them. The objective is to provide students with the necessary tools to integrate land				ry tools to integrate landscape and	
	environmentally sustainable crite	eria in their arch	itecture and urbar	n planning projects, as v	well as to collaborate effectively in	
	multidisciplinary teams in proces	ses of habitat ti	ransformation, und	derstood as the space i	n which humans dwell, works and	
	uses.					

	Study programme competences / results				
Code	Study programme competences / results				
A2	Ability to conceive and represent the visual attributes of objects and master proportion and drawing techniques, including digital ones (T)				
A3	Knowledge of spatial representation systems and projections adapted and applied to architecture				
A4	Knowledge of the analysis and the theory of form and the laws of visual perception adapted and applied to architecture and urbanism				
A17	Ability to apply technical and construction standards and regulations				
A19	Ability to maintain the finished work				
A20	Ability to assess the construction works				
A34	Ability to design, implement and develop sketches and drafts, concept designs, developed designs and technical designs (T)				
A35	Ability to design, implement and develop urban projects (T)				
A36	Ability to design, implement and develop construction management (T)				
A37	Ability to develop functional programs for buildings and urban spaces (T)				
A39	Ability to remove architectural barriers (T)				
A40	Ability to practise architectural criticism				
A41	Ability to solve the passive environmental conditioning, including thermal and acoustic insulation, climate control, energy efficiency and				
	natural lighting (T)				
A44	Ability to develop civil work projects (T)				
A45	Ability to design and execute urban layouts and urbanization, gardening and landscape design projects (T)				
A46	Ability to apply standards and urban regulations				
A47	Ability to develop environmental, landscape and environmental impact correction studies (T)				

A51	Adequate knowledge of the methods of studying the social requirements, living conditions, habitability and basic housing programmes
A52	"Adequate knowledge of ecology, sustainability and the principles of conservation of energy and environmental resources. "
A53	Adequate knowledge of the architectural, urban and landscape traditions of Western culture, as well as their technical, climatic, economic,
	social and ideological foundationsxicos.
A54	Adequate knowledge of aesthetics and theory and history of fine arts and applied arts
A55	Adequate knowledge of the relationship between cultural patterns and social responsibilities of the architect
A57	Adequate knowledge of urban sociology, theory, economics and history
A58	Adequate knowledge of the methodological foundations of territorial, metropolitan and urban planning.
A59	Knowledge of the mechanisms of development and management of urban planning at all scales
A67	Coñecemento avanzado de aspectos específicos da materia de Proxectos no contemplados expresamente na Orde EDU/2075/2010
A69	Coñecemento avanzado de aspectos específicos da materia de Urbanismo no contemplados expresamente na Orde EDU/2075/2010
B1	Students have demonstrated knowledge and understanding in a field of study that is based on the general secondary education, and is
	usually at a level which, although it is supported by advanced textbooks, includes some aspects that imply knowledge of the forefront of
	their field of study
B2	Students can apply their knowledge to their work or vocation in a professional way and have competences that can be displayed by mean
	of elaborating and sustaining arguments and solving problems in their field of study
B3	Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgements that include
	reflection on relevant social, scientific or ethical issues
B4	Students can communicate information, ideas, problems and solutions to both specialist and non-specialist public
B5	Students have developed those learning skills necessary to undertake further studies with a high level of autonomy
B6	Knowing the history and theories of architecture and the arts, technologies and human sciences related to architecture
B7	Knowing the role of the fine arts as a factor that influences the quality of architectural design
B8	Knowing the urbanism and techniques applied in the planning process
C1	Adequate oral and written expression in the official languages.
C3	Using ICT in working contexts and lifelong learning.
C4	Exercising an open, educated, critical, committed, democratic and caring citizenship, being able to analyse facts, diagnose problems,
	formulate and implement solutions based on knowledge and solutions for the common good
C5	Understanding the importance of entrepreneurial culture and the useful means for enterprising people.
C6	Critically evaluate the knowledge, technology and information available to solve the problems they must face
C7	Assuming as professionals and citizens the importance of learning throughout life
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

the planning table is for guidar	ce only and does not	take into account the h	neterogeneity of the s	students.	
	Methodolo	gies			
		Description			
Each week, a topic will be introc	uced by the lecturers.	The student will have to s	supplement this preser	ntation with the reading	
of recommended bibliography e	xtracts. Attendance to I	ectures is mandatory, with	th a maximum of 20%	of unexcused absences	
admitted. Sessions will be strict	y timely. The use of mo	obile devices (such as co	mputers, tablets or pho	ones) will not be allowed	
during the course of the class					
An important part of coursework	consists in selecting th	ne relevant information a	nd data. Therefore, the	e student should be	
familiar with the instruments of t	he discipline.				
The Learning Service project aims to facilitate the visualization of the demands of the local community, in an inclusive and					
participatory manner, regarding the development of a proposal for the landscape regeneration of Lourizán area, a coastal site					
in Pontevedra, after the departure of the Industrial Complex of Ence. The development of the ApS project will be carried out in					
collaboration with the Association for the Defense of the Ria (APDR). The APDR was founded in 1987 as a response to public					
concern about the dramatic environmental deterioration suffered by the natural environment in the Ría de Pontevedra; It is a					
pluralistic environmental association open to all people who, regardless of their condition and ideology, share an interest in the					
recovery and enhancement of P	ontevedra?s bay and la	andscape			
Preparation of material summar	ze the coursework for t	the end of year exhibitior	organized by the De	partment of Architectural	
Projects, Urban Planning and C	omposition: "Arch	nitectures in Course. DPA	UC" (panels, mo	odels, drawings, videos,	
texts, performances, etc.).					
Attendance at dissemination even	ents (congresses, semi	nars, symposiums, etc.),	organized by ETSAC,	or DPAUC, etc.,	
indicated by tutors as part of the teaching content of the course, with the objective of providing students with knowledge and					
current experiences related to a particular field of study.

		drawings, videos, texts, performances, etc.).	

Assessment comments

In the general evaluation of the course, the following aspects will be valued: attendance and participation in class and workshops and activities - Class attendance: minimum 80% of expositive sessions and 80% of interactive sessions. In addition, the teaching staff will assess whether attendance is active by participating in the expository sessions (answering questions), in team or individual corrections. Active participation may be valued as an increase in the final grade.

The grade of the first opportunity will be "Not Presented" if you have not delivered any of the mandatory items. However, active participation in class, during the school period, that demonstrate adequate knowledge of the contents of the subject may be valued by the teaching staff.

For students with recognition of part-time dedication according to the "Norm that regulates the regime of dedication to the study of undergraduate students at the UDC" the minimum class attendance will be 50%, both in the interactive sessions and in the expository ones. The rest of the evaluation elements will be the same as in the general case. In relation to the final test, what is described in article 12 of the "Rules of Evaluation, Review and Complaint of the Qualifications of the Degree Studies and University Master of the UDC" (consolidated version 2017) will be followed. Academic waiver: it is not contemplated, as it is a subject in which the workshop is the fundamental methodology.

The detection of plagiarism, as well as the fraudulent performance of tests or evaluation activities, once verified, will directly imply the grade of failing "0" in the subject in the corresponding call, thus invalidating any grade obtained in all evaluation activities. ahead of the extraordinary call. Second opportunity:

In order to pass the subject on a second opportunity, it is necessary to repeat the evaluable items in which the pass was not achieved.

The tutored works would be re-elaborated, corrected or completed according to the indications of the tutors of the matter. For this, it is recommended that the teams make use of academic tutorials with their corresponding tutors during the second semester. The works will be delivered, at most, up to a week before the second chance exam.

Students who have not met the minimum attendance during the school period will not be eligible for a positive evaluation.

For everything else, the evaluation criteria for the second chance will be the same as for the first
