General description	Basis of flow in porous and fracture	ed media (phy	sical hydrogeolo	gy) in both saturated an	d unsaturated	
	conditions. Interactions of surface v	water and grou	undwater. Hydro	geochemical principles	and rockwater	
	interaction (chemical hydrogeology	, transport in p	porous media), h	ydrodynamics test of ac	quifers	
	(slug tests, pumping tests,?), const	ructive aspect	ts of wells, devel	opment and exploitation	of aquifers	

	Study programme competences / results
Code	Study programme competences / results
A15	General vision and balanced of the basic aspects and application of underground hydrologic from the needs of civil engineering. Capacity
	to Project or interpret the different hydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the
	constructive aspects of the water uptake
B1	To resolve problems effectively
B2	To apply critical thinking, logic and creativity
B3	To work individually with initiative
B4	To communicate effectively in work surroundings
B5	Continuous recycling of knowledge in a general perspective in a global situation of water engineering
B6	Understanding of the need to analyse history to understand the present
B7	Facility to integrate in multidiscipline teams
B8	Capacity to organize and plan
B9	Capacity for analysis, synthesis and structure of information and ideas
C1	To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people
C2	To value knowledge critically, technology and available information to resolve problems that they will face
C3	To assume as a professional and citizen the importance of learning throughout life
C4	To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society
C5	To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, ofter in the context of investigation
C6	The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study area
C7	The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judments
C8	The students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and not spezialated in a clear and unambiguous way.
C9	The student must possess the learning ability with permits them to continues to study in a manner wich will be in a great measure self

	Contents
Topic	Sub-topic Sub-topic
Introduction to the Hydrologic Cycle	Components
	Evapotranspiration and potencial Evapotranspiration
	Infiltration and recharge
	Baseflow
Geologic materials	Continental environments:erosion, transportation and deposition
	Kind of depositis: fluvial, eolian, lacustrine and galcial
	Uplift, diagenesis and erosion
	Tectonism and the formation of fractures
Ground water movement	Basic concepts
	Darcy's experimental law and field extensions
	Propierties: porosity and hydraulic conductivity
	Filed Mapping
	Flow in fractured rocks
Main equations of flow	Conservation of fluid mass
	The storage properties of porous media
	Boundary conditions and flow nets
Flow in the unsaturated zone	Richards 's equation
	Unsaturated flow in fractured rocks
Solute and particle transport	Advection
	Basic concepts of dispersion: diffusion and mechanical dispersion
Principles of aqueous geochemistry	Aqueous systems
	Equilibrium versus kinetic descriptions
	Equilibrium models of reaction
	Kinetcis reactions
	Ground water composition
Chemical reactions	Homogeneous reactions: Acid-base reactions, complextion reactions,
	oxidation-reductions reactions
	Heterogeneous reactions: dissolution/precipitation, reactions on surfaces
Saline water/ Sweet Water interface	Saline intrusion
	Methods
Hydraulic testing	Conventional hydraulic testing
	Single borehole test
	hydraulic testing in fractured or low permeability rocks
	Others methods of testing

Ground water as a resource	Land subsidence
	Coastal aquifers
	drainage on slopes
	road drainge
	dams

	Planning	g		
Methodologies / tests	Competencies /	Teaching hours	Student?s personal	Total hours
	Results	(in-person & virtual)	work hours	
Seminar	A15 B1 B2 B3 B4 B5	30	30	60
	B6 B7 B8 B9 C1 C2			
	C3 C4 C5 C6 C7 C8			
	C9			
Guest lecture / keynote speech	A15 B1 B2 B3 B4 B5	30	30	60

Personalized attention		30	0	30

Methodologies		
Methodologies	Description	
Seminar	Practical lectures related to the theoretical aspects regarded at the magistral lectures	
Guest lecture /	Regular lectures where the main theoretical contents of the subjects are regarded	
keynote speech		

	Personalized attention
Methodologies	Description
Guest lecture /	Pernonalized attention to be provided for the semminars
keynote speech	
Seminar	

		Assessment	
Methodologies	Competencies /	Competencies / Description	
	Results		
Guest lecture /	A15 B1 B2 B3 B4 B5	The knowledge of the concepts developed at the magistral lectures will be assesed	50
keynote speech	B6 B7 B8 B9 C1 C2	and considered for the final mark	
	C3 C4 C5 C6 C7 C8		
	C9		
Seminar	A15 B1 B2 B3 B4 B5	The attendance to the semminars and the work being developed at the semminars will	50
	B6 B7 B8 B9 C1 C2	be considered for the final mark	
	C3 C4 C5 C6 C7 C8		
	C9
