General description	The concepts learned in the developed master are developed in project			

	Study programme competences / results
Code	Study programme competences / results
A1	Knowledge, understanding and capacity to apply legislation related with water engineering during professional development. Capacity to
	analyse the working mechanism of the economy and public and private management of water
A2	Capacity to resolve basic physical problems of water engineering and theoretic and practical Knowledge of the chemistry, physics,
	mechanics and technologic properties of the water
А3	Capacity to apply the mechanics of the fluids and the fundamental flow equations in calculate for conductions at pressure and in free layer
A4	Capacity to apply the hydrology knowledge and the principles of flow mechanics in the method of calculations about hydrology as well as
	surface and underground. Capacity to make the evaluation of the hydraulic resources and apply the principal tools to do the hydrologic
	planning and the regulation and lamination of the inputs Capacity to analyse the river hydraulics and to apply the knowledge acquired in
	the restauration of the river direction and other works about rivers and their surroundings
A5	Knowledge of the basic concepts about ecology applied to water engineering. Capacity to act in the respectful way and enriching way
	about the environment contribution to the sustainable development. Capacity to analyse the ecological quality of water. Knowledge of the
	basic principles of the ecology and basic understanding of the working continental water systems
A6	Capacity to analyse the mechanism of the economy working and the public and private management of water
A7	Knowledge of the fundamentals about the evaluation of water resources and the principal tools for the hydrological planning, starting from
	theoretical justification and practical applications that lead to the specific problem resolution and the use of updated methodologic
	(programs and models) for the evaluation of the exploitation, uses, defence, and the management the combined planning of surface and
	underground water. Knowledge of national and hydrological plans
A8	Capacity to calculate and manage of extreme avenues
A9	Knowledge of geographical information systems (SIG) applied to the management of water resources. Knowledge of the basic working of
	the system for the analysis of the geographical data, making use of SIG tools and support management and the analysis of data regarding
	water resources. Knowledge of the geospatial data and his characteristics and the processes for its acquisition, storage treatment
	analysis, modelling and presentation
A10	Understanding of the fundaments of dynamic fluid computation (CFD). Capacity to elaborate codes that can resolve non-understandable
	flow on the surface as well as in the porous media
A11	Knowledge of numerical models applied to hydraulic engineering. Capacity to use and analyse the results of the hydraulic models.
	Capacity to design, develop and analyse numerical schemes used in a hydraulic models
A12	Capacity to use commercial numerical models for flux in free layer, flow pressure, drainage, hydrologic calculations for avenues, sediment
	transport in rivers and costal zones, transport of contaminants and wave propagation
A13	Knowledge of the experimental technics applied to the water engineering. Capacity to design experiments. Capacity to develop reduced
	models in the laboratory. Capacity to use different types of experimental instrumentation, including flowmeter, depth probes,
	three-dimensional speedometer, limnimeter, windlass

A 4 4	Kandada and adam ta Parkada and a standard and a standard to the standard transfer of the standard and a standard transfer of the standard transfe
A14	Knowledge and understanding for design and construction of scale-models of hydraulic structures. Understanding of different technics that
	exist in the measurement of physical conditions (pressure, temperature, speed?) in the field of hydraulic knowledge of computing systems
A15	and electronic control and the acquisition of hydraulic data (monitoring and control of the river basin, hydraulic circuit, etc)
AIS	General vision and balanced of the basic aspects and application of underground hydrologic from the needs of civil engineering. Capacity
	to Project or interpret the different hydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the
A16	constructive aspects of the water uptake
A16	Knowledge of the chemical basis of water which totally condition its behaviour in nature and its uses. Understanding and knowledge of the
A 4 7	different water regulations for quality at local, national and European level
A17	A global vision of water supply by the distinct elements which form it, at the same time having the necessary knowledge for its basis
A40	dimensioning and technological aspects related to its management and constructive implementation
A18	Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general
140	analysis of water engineering projects in the area of cooperation and development and humanitarian aid.
A19	Knowledge of advanced water treatment with different conclusions: depuration, re-use, purification, elimination of nutrients and
	regeneration treatments
A20	Use and management of measuring equipment in the field and in the laboratory. Knowledge of the methodology of control process and the
	determination of design parameters for water treatment processes
A21	Knowledge of water quality control models. Capacity to analyse and propose solutions to problems in water quality control
A22	Capacity to plan, to Project, to measure and to direct the constructions and exploitation of water conducts, reservoirs, hydroelectric
	installations, river regulations systems, water channels, river works, and other hydrologic and hydraulics Works
A23	Fundamental knowledge of energy consumption and its environmental implications inside a development sustainable
A24	Capacity to design and manage the water supply and treatment in a population area, including design and Project for solutions regarding
	water treatment, drainage, and advanced management of residual waters in the city. Knowledge regarding advanced processes for the
	water treatment, elimination of nutrients, and management strategy in times of rainwater
A25	Knowledge and understanding of water in different situations: the working of ecosystems, environmental factors with the purpose of to
	make an inventory of medium, applying the methodology to value the impact and its use in studies and evaluations of the environmental
	impact.
B1	To resolve problems effectively
B2	To apply critical thinking, logic and creativity
В3	To work individually with initiative
B4	To communicate effectively in work surroundings
B5	Continuous recycling of knowledge in a general perspective in a global situation of water engineering
В6	Understanding of the need to analyse history to understand the present
В7	Facility to integrate in multidiscipline teams
B8	Capacity to organize and plan
В9	Capacity for analysis, synthesis and structure of information and ideas
C1	To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people
C2	To value knowledge critically, technology and available information to resolve problems that they will face
C3	To assume as a professional and citizen the importance of learning throughout life
C4	To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in
	society
C5	To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often
	in the context of investigation
C6	The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known
	within wider contexts (or multidiscipline) related with the study area
C7	The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been
0,	incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judments
C8	The students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and
Co	
	not spezialated in a clear and unambiguous way.
C9	The student must possess the learning ability with permits them to continues to study in a manner wich will be in a great measure self
	directed and individual

Topic	Sub-topic Sub-topic

The students should write a final master work as an obligatory There are no subtopics requirement to obtain the tittle of Master in Water Engineering.

In order to do so, the coordinator of the host university will appoint a tutor being an expert on the subjects that students might choose as the object of their dissertations. The purpose of the dissertation is a research/practical work in any field related to Water Engineering. The dissertation can be developed at the Universities of A Coruña, Magdeburg or other universities with which they have bilateral agreements. Upon completion of the work, the tutor will receive a report which will be assessed by a examination board with three members, to be established at the host university. There will be a normalized format for all the students that will be ajusted to this. The students will have to give a copy to

The language in wich it is written and presented will be in english

presentation.

Assessment comments

Examination board constituted by three lecturers, including the supervisor and the coordinator of the master degree.20 minutes talk plus questions. Report submission (one week prior to the dissertation). The fraudulent performance of the Master Thesis Dissertation, once verified, will directly imply a failing grade of "0" in the subject in the corresponding exam session, thus invalidating any grade obtained in all the assessment activities in the extraordinary exam session.
