

Teaching Guide

Identifying Data				2022/23	
Subject (*)	Física aplicada II	Code	632G02005		
Study programme	Grao en Tecnoloxía da Enxeñaría Civil				
Descriptors					
Cycle	Period	Year	Type	Credits	
Graduate	2nd four-month period	First	Basic training	6	
Language	SpanishGalician				
Teaching method	Face-to-face				
Prerequisites					
Department	Enxeñaría Naval e Industrial				
Coordinador	Fernandez Garrido, Simon	E-mail	simon.fgarrido@udc.es		
Lecturers	Fernandez Garrido, Simon Galan Díaz, Juan José	E-mail	simon.fgarrido@udc.es juan.jose.galan@udc.es		
Web	https://campusvirtual.udc.gal/login/index.php				
General description	The fundamental objective of this matter is to provide the student with a clear and logical presentation of the basic concepts and principles of physics, and strengthen the understanding of these concepts and principles across a wide range of interesting applications to the real world. To achieve in a full way this objective, students must already have acquired their training in the subject taught in Física Aplicada I.				

Study programme competences / results

Code	Study programme competences / results
A1	Capacidad para plantear y resolver los problemas matemáticos que puedan plantearse en el ejercicio de la profesión. En particular, conocer, entender y utilizar la notación matemática, así como los conceptos y técnicas del álgebra y del cálculo infinitesimal, los métodos analíticos que permiten la resolución de ecuaciones diferenciales ordinarias y en derivadas parciales, la geometría diferencial clásica y la teoría de campos, para su aplicación en la resolución de problemas de Ingeniería Civil.
A2	Uso y programación de ordenadores.
A3	Capacidad para resolver numéricamente los problemas matemáticos más frecuentes en la ingeniería, desde el planteamiento del problema hasta el desarrollo de la formulación y su implementación en un programa de ordenador. En particular, capacidad para formular, programar y aplicar modelos numéricos avanzados de cálculo, así como capacidad para la interpretación de los resultados obtenidos en el contexto de la ingeniería civil, la mecánica computacional y/o la ingeniería matemática, entre otros.
A4	Comprensión de la aleatoriedad de la mayoría de los fenómenos físicos, sociales y económicos, que permite actuar de la forma correcta en la toma de decisiones ante la presencia de incertidumbre y efectuar análisis y crítica racional de actuaciones.
A5	Capacidad para resolver los problemas físicos básicos de Ingeniería Civil, y conocimiento teórico y práctico de las propiedades físicas, químicas, mecánicas y tecnológicas de los materiales de construcción más utilizados en construcción.
A6	Capacidad para documentarse, obtener información y aplicar los conocimientos de materiales de construcción en sistemas estructurales. Conocimientos de la relación entre la estructura de los materiales y las propiedades mecánicas que de ella se derivan, incluyendo la caracterización microestructural. Conocimiento, comprensión y capacidad para aplicar los métodos, procedimientos y equipos que permiten la caracterización mecánica de los materiales, tanto experimentales como analíticos.
A7	Comprensión y dominio de los conceptos básicos sobre las leyes generales del movimiento mecánico y del equilibrio de los cuerpos materiales, y capacidad para su aplicación en la resolución de problemas de Mecánica.
A25	Conocimiento y comprensión del funcionamiento de los ecosistemas y los factores ambientales con el fin de inventariar el medio, aplicando metodologías de valoración de impactos para su empleo en estudios y evaluaciones de Impacto Ambiental.
A35	Capacidad para concretar ante un problema constructivo alternativas válidas y elegir la óptima, previendo los problemas de su construcción.
A36	Conocimiento del marco técnico, económico y legislativo, así como los procedimientos constructivos, la maquinaria de construcción y las técnicas de planificación de las obras.
B1	Que los estudiantes hayan demostrado poseer y comprender conocimientos en un área de estudio que parte de la base de la educación secundaria general, y se suele encontrar a un nivel que, si bien se apoya en libros de texto avanzados, incluye también algunos aspectos que implican conocimientos procedentes de la vanguardia de su campo de estudio

B2	Que los estudiantes sepan aplicar sus conocimientos a su trabajo o vocación de una forma profesional y posean las competencias que suelen demostrarse por medio de la elaboración y defensa de argumentos y la resolución de problemas dentro de su área de estudio
B3	Que los estudiantes tengan la capacidad de reunir e interpretar datos relevantes (normalmente dentro de su área de estudio) para emitir juicios que incluyan una reflexión sobre temas relevantes de índole social, científica o ética
B4	Que los estudiantes puedan transmitir información, ideas, problemas y soluciones a un público tanto especializado como no especializado
B5	Que los estudiantes hayan desarrollado aquellas habilidades de aprendizaje necesarias para emprender estudios posteriores con un alto grado de autonomía
B6	Resolver problemas de forma efectiva.
B7	Aplicar un pensamiento crítico, lógico y creativo.
B8	Trabajar de forma colaborativa.
B9	Comportarse con ética y responsabilidad social como ciudadano y como profesional.
B10	Comunicarse de manera efectiva en un entorno de trabajo.
B11	Entender y aplicar el marco legal de la disciplina.
B12	Comprensión de la necesidad de actuar de forma enriquecedora sobre el medio ambiente contribuyendo al desarrollo sostenible.
B13	Comprensión de la necesidad de analizar la historia para entender el presente.
B14	Capacidad para organizar y dirigir equipos de trabajo así como de integrarse en equipos multidisciplinares.
B15	Claridad en la formulación de hipótesis.
B16	Capacidad de autoaprendizaje mediante la inquietud por buscar y adquirir nuevos conocimientos, potenciando el uso de las nuevas tecnologías de la información y así poder enfrentarse adecuadamente a situaciones nuevas.
B17	Capacidad para aumentar la calidad en el diseño gráfico de las presentaciones de trabajos.
B18	Capacidad para aplicar conocimientos básicos en el aprendizaje de conocimientos tecnológicos y en su puesta en práctica.
B19	Capacidad de realizar pruebas, ensayos y experimentos, analizando, sintetizando e interpretando los resultados.
C1	Expresarse correctamente, tanto de forma oral como por escrito, en las lenguas oficiales de la comunidad autónoma.
C2	Dominar la expresión y la comprensión de forma oral e escrita de un idioma extranjero.
C3	Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de la vida.
C4	Desarrollarse para el ejercicio de una ciudadanía abierta, culta, crítica, comprometida, democrática y solidaria, capaz de analizar la realidad, diagnosticar problemas, formular e implantar soluciones basadas en el conocimiento y orientadas al bien común.
C5	Entender la importancia de la cultura emprendedora y conocer los medios al alcance de las personas emprendedoras.
C6	Valorar críticamente el conocimiento, la tecnología y la información disponible para resolver los problemas con que deben enfrentarse.
C7	Asumir como profesional y ciudadano la importancia del aprendizaje a lo largo de la vida.
C8	Valorar la importancia que tiene la investigación, la innovación y el desarrollo tecnológico en el avance socioeconómico y cultural de la sociedad.

Learning outcomes			
Learning outcomes	Study programme competences / results		
Expose and resolve of a theoretical way the his more and his less physical-mathematical related with the Civil Engineering. In particular, know, understand and use the mathematical note, as well as the concepts, the basic physical principles and the analytical methods that allow the resolution of said his more and his less.	A1 A4 A5	B8 B16 B19	
Apply the theoretical knowledges purchased in the resolution of his more and his less than exposes in own works of the professional exercise, taking how model examples analysed in the exercises of the matter, but knowing at the same time enter the variations of the conditions of outline that impose the own reality.	A1 A7	B17 B18	
Knowing the basic characteristics to level of physical behaviour-structural of the most employed materials in the Civil Engineering	A4		
Check the theoretical knowledges purchased contribution of the physical behaviour-structural of the materials in concrete examples of his application in works of Civil Engineering. Influence of external conditionings of all type (climatic, economic, environmental, efforts to bear, etc).	A4	B14	C6

Continuous recycling of knowledges in the global field of performance of the Civil Engineering. Comprise the importance of the innovation in the profession.	A1 A2	B8 B14	
Ease for the integration in multidisciplinary teams. Capacity to organise and direct teams of work. Work of form colaborativa. Communicate of effective way in some surroundings of work		B5 B7 B15	C1 C2 C8
Capacity to confront the young situations. Resolve his more and his less than effective form. Apply a critical thought, logical and creative.		B1 B2 B3 B4 B8	C7
Express properly, so much of oral form as written, in the official tongues of the autonomous community.			C1 C2
Use the basic tools of the Technology of the Information that are of frequent use during the exercise of the profession.	A2	B10	C3
Exercise of an open citizenship, literate, critical, committed, democratic y solidaria, able to analyse the reality, diagnose his more and his less, formulate and implant solutions based in the knowledge and oriented to the common wealthfare.		B1 B3 B6 B11 B12 B13	C4 C5
Communicative skills and clarity of oral exhibition and written.		B9	
Capacity to realise proofs, essays and experiments, analysing, concretising and interpreting the results.	A1 A35 A36		
Understand the importance of the dynamic culture and know the means near at hand of the dynamic people . Assume how professional and citizen the importance of the learning to the long of the life. Value the importance that has the investigation, the innovation and the technological development in the socioeconomic and cultural advance of the society.		B1 B3	C5
Basic principles to analyze and understand how the characteristics of the structures that influence their behavior, as well as to know the typologies most usual in Civil Engineering.	A1 A5	B8	
Exploitation and incorporation of the new technologies in his more and his less practical related with the matter.	A2 A3 A6	B10	C3 C6
Understanding of the need to act of form enriquecedora on the environment contributing to the sustainable development	A25	B6 B12 B14	C4 C6
Capacity of analysis, synthesis and structuring of the information and the Ideas. Clarity in the approach of hypothesis. Capacity of abstraction	A1 A5 A35	B1	
Capacity of personal work, organised and scheduled. Capacity of autoaprendizaje by means of the restlessness for looking for and purchase new knowledges, improving the use of the new technologies of the information. Work of autonomous form with initiative	A1	B3 B8 B9 B11 B13	
Capacity of autoaprendizaje using the new technologies of the information, doing experiments and works in the laboratory	A1	B16 B18 B19	C8
Skill to do outlines and achieve results by means of schemes		B17	

Contents	
Topic	Sub-topic

Theme I. Thermodynamics	Generalities. Heat and its measurement. First principle of thermodynamics. Second principle of thermodynamics. Status changes. Heat transfer
Theme II. Electric field	Previous concepts. COULOMB force. Electric field in a medium (intensity, energy, GAUSS). Electric field in a conductor (types of materials, capacity, capacitors, energy)
Theme III. Continuous or direct current	Circuit theory (Q, V, I, power, energy). OHM law. Laws of KIRCHOFF
Theme IV. Magnetic field	Magnetism (LORENTZ force, BIOT and SAVART law, AMPERE law). EM (induction, LENZ and FARADAY laws, f.e.m)
Theme V. Mechanics of fluids	Properties of fluids. Surface tension. Capillarity. EULER equation. Hydrostatic. Fluid translation and rotation.

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student?s personal work hours	Total hours
Introductory activities	A4 B8 B11 B12 B13 B15 B1 B6 B7 C2 C4 C5 C6 C7	25	25	50
Mixed objective/subjective test	A5 A35 B9 B2 B4 C1	4	7	11
Problem solving	A1 A2 A3 A6 A7 A25 A36 B10 B14 B3 B5 B16 B17 B18 B19 C3 C8	25	50	75
Personalized attention		14	0	14

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Introductory activities	They will consist basically on theoretical explanations of the different sections of the agenda. They will also contextualize each topic within its possible practical applications for professional life.
Mixed objective/subjective test	Test that comprises brief theoretical questions and practical exercises.
Problem solving	Resolution of proposed exercises related to all the theory explained.

Personalized attention	
Methodologies	Description
Introductory activities Problem solving	Mentoring hours will be provided, either individual or collective, for the solution of the difficulties that may appear during the course of the semester. Likewise, the professors will answer by e-mail the specific doubts that the students consult them. In the case of problem solving, the student will have to contact the teacher in the case that, once exposed in class, explained and reviewed at home by the student, the latter considers that he does not understand them or needs more examples to strengthen your understanding.

Assessment			
Methodologies	Competencies / Results	Description	Qualification

Mixed objective/subjective test	A5 A35 B9 B2 B4 C1	Realization of the examinations organized in the general planning of the course.	90
---------------------------------	--------------------	--	----

Assessment comments

Class attendance and participation, as well as the results obtained in "surprise" tests, will only serve to round up or define the final grade and provided that the student has obtained an "acceptable" mark in the mixed test.

Below are the basic rules to follow during the performance of the mixed test:

Only the writing instruments, calculator and ID card can be on the test table. Mobile phones must be disconnected and stored out of the reach of the student at all times and cannot be used to check the time. The exam sheet will be flipped when instructed by the teacher. The sheets must be numbered correctly and signed on the first and last page of the exam at the end of the same. The exam can not be done in pencil or use any type of corrector. Each student will be attentive only to their exam, any attempt to examine a peer's exam may mean a zero in the exam grade. In case of transmission of information between students, the exam will be withdrawn to both. The duration of the exam will be set by the teacher at the beginning of the same, not having extra time, unless otherwise indicated. When the exam is finished, a flight will be left on the table and the student will leave without making any noise or comment, otherwise he will be sanctioned with the loss of 1.5 points. The date and time of review will be unique, only exceptions that are highly justified and prior will be addressed. A list will be taken before the review, and students who arrive later will not be able to join it. Each student will be attentive only to his examination, any attempt to throw a glimpse to the examination of a mate will suppose the loss of 1,5 points. In case of reincidencia will withdraw him the examination. In case of transmission of information between students the examination will be them withdrawn to the two. The length of the examination will be fixed by the/to professor/the to the beginning of the even; not having extra time, except indication in contrary. When it finish the student will leave without doing noise neither comment any, in contrary case will be able to be sanctioned with the loss of 1,5 points. The date and hour of the review will be only, only will attend exceptions that are very justified. It will happen list before the review, not being able to incorporate to the same students that arrive subsequently. The same criteria will be applied in the opportunity of July
