| General description     | This subject introduces recent stra  | ategies for struc   | cturing hard materia   | ls (nanoparticles, nano | composites and porous          |
|                         | monoliths hierarchically) by compl   | lex fluids. Comp  | olex fluids that are t | ypically considered: so | lutions of large molecules (eg |
|                         | polymers.) Or supramolecular structures (eg micelles) In ordinary liquids, foams or emulsions. The aim of this course is to  |   |                        |                         |                                |
|                         | illustrate how physical concepts of complex fluids can be applied to the rational design of advanced materials. For each     |   |                        |                         |                                |
|                         | system, the emphasis will be on: structure / properties of the final solid materials; the structure and stability of complex |   |                        |                         |                                |
|                         | fluids. some specific characterization techniques are presented.   |   |                        |                         |                                |

|      | Study programme competences   |
|------|---|
| Code | Study programme competences   |
| A1   | Set up and conduct tests using the techniques of thermal analysis and rheology most appropriate in each case, within the scope of             |
|      | complex materials   |
| А3   | Knowing the different types of thermal and rheological behaviors of the materials   |
| B1   | Knowledge and understanding to provide a basis or opportunity for originality in developing and / or applying ideas, often in a research      |
|      | context   |
| B2   | The students have the skill to apply their knowledge and their ability to solve problems in new or unfamiliar contexts within broader (or     |
|      | multidisciplinary) contexts related to their field of study   |
| B4   | That the students can communicate their conclusions and the knowledge and last reasons behind that conclusions to specialized and non         |
|      | specialized audience in a clear and unambiguous way   |
| В8   | Applying a critical, logical and creative way of thinking   |
| B12  | Communicate effectively in the work environment   |
| B13  | Analysis-oriented attitude  |
| B14  | Ability to find and manage the information  |
| B21  | To assess the importance of research, innovation and technological developments in the socio-economic and cultural progress of society        |
| B22  | Understand the importance of protecting the environment   |
| C2   | Have a good command of spoken and writing expression and understanding of a foreign language.   |
| C4   | Developing for the exercise of an open, educated, critical, committed, democratic and solidary citicenship, able to analyze reality, diagnose |
|      | problems, formulate and implement solutions based on knowledge and oriented to the common good.   |
| C6   | Critically assessing the knowledge, technology and information available to solve the problems they face with.                                |
| C7   | To assume as a professional and citizen the importance of learning throughout life.   |

|                     | Methodologies   |
|---------------------|---|
| Methodologies       | Description   |
| Guest lecture /     | Oral presentation (using audiovisual material and student interaction) designed to transmit knowledge and encourage learning.   |
| keynote speech      | Presentations of this type are variously referred to as ?expository method?, ?guest lectures? or ?keynote speeches?. (The       |
|                     | term ?keynote? refers only to a type of speech delivered on special occasions, for which the lecture sets the tone or           |
|                     | establishes the underlying theme; it is characterised by its distinctive content, structure and purpose, and relies almost      |
|                     | exclusively on the spoken word to communicate its ideas.)   |
| Laboratory practice | Practice-based learning method involving activities such as demonstrations, exercises, experiments and research.                |
| Supervised projects | Supervised learning process aimed at helping students to work independently in a range of contexts (academic and                |
|                     | professional). Focused primarily on learning ?how to do things? and on encouraging students to become responsible for their     |
|                     | own learning.   |
| Objective test      | Written learning progress test, characterised by pre-determined answers. Well-designed tests offer objectively quantifiable     |
|                     | results in relation to student knowledge, capacities, skills, performance, aptitudes, attitude, intelligence, etc. Used for     |
|                     | diagnostic, formative and summative assessment. May consist of all or any of the following types of questions: multiple choice, |
|                     | ordering and sequencing, short answer, binary, completion, multiple matching.   |

|               | Personalized attention |
|---------------|------------------------|
| Methodologies | Description            |

| Guest lecture /     | The personalized attention to students, understood as a support in the teaching-learning process, will take place in the hours |
|---------------------|--|
| keynote speech      | of tutoring of the teacher.  |
| Laboratory practice |  |
| Supervised projects | No academic dispensation is accepted.  |
| Objective test      |  |

|                     |                     | Assessment  |    |

## **Assessment comments**

No academic dispensation is accepted.

The evaluation criteria for the second opportunity and the extraordinary opportunity are the same as for the first opportunity.

To help achieve a sustained immediate environment and meet the objective of action number 5: "Healthy and sustainable environmental and social teaching and research" of the "Green Campus Ferrol Action Plan": The delivery of the documentary works that are made in this matter: They will be requested in virtual format and/or computer supportly will be done through Moodle, in digital format without the need to print themIn case it is necessary to make them in paper: No plastic shall be used Double-sided printing will be done. Recycled paper will be used. Drafts should be avoided. A sustainable use of resources and the prevention of negative impacts on the natural environment must be made- Efforts will be made to identify and change gender biases and attitudes, and to influence the environment to change them and promote values of respect and equality. Situations of discrimination must be detected and actions and measures proposed to correct them.
