General description	The students will do a research pro	ject using the knowledge acqu	uired in the Rheology and	Thermomechanical modules.	
	The Master Thesis is conducted, ur	nder the joint guidance of a tea	acher of the UDC and one	e of the UParis7, at the UDC, at	
	UParis7 or at any public research o	rganization or industry. It is po	ossible to combine the sta	y in various centres if the	
	director considers it appropriate. Whenever possible, the stay of the French students in Spain and Spanish in France is				
	recommended.				

	Study programme competences
Code	Study programme competences
A1	Set up and conduct tests using the techniques of thermal analysis and rheology most appropriate in each case, within the scope of
	complex materials
A2	Identify and evaluate the different types of complex materials
A3	Knowing the different types of thermal and rheological behaviors of the materials
A4	Knowing and applying statistical methods to analyze data from complex material testing
A5	Understanding the relationships between structure and properties of materials
A6	Understanding the importance of the environment and of the research focused on the elimination/minimization of final or process wastes
A7	Knowing the different types of thermal thermo-mechanical behaviors in materials subjected to fatigue
A8	Understand and quantify the damage caused by thermomechanical fatigue in materials
B1	Knowledge and understanding to provide a basis or opportunity for originality in developing and / or applying ideas, often in a research
	context
B2	The students have the skill to apply their knowledge and their ability to solve problems in new or unfamiliar contexts within broader (or
	multidisciplinary) contexts related to their field of study
В3	That students are able to integrate knowledge and handle complexity, and formulate judgments from an information that, being limited or
	not complete, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments
B4	That the students can communicate their conclusions and the knowledge and last reasons behind that conclusions to specialized and no
	specialized audience in a clear and unambiguous way
В7	Solving problems effectively
B8	Applying a critical, logical and creative way of thinking
В9	To work autonomously with initiative
B10	Working in a collaborative way
B11	Behave with ethics and social responsibility as a citizen and as a professional
B12	Communicate effectively in the work environment
B13	Analysis-oriented attitude

B14	Ability to find and manage the information
B17	Analyze and decompose processes
B18	Ability for abstraction, understanding and simplification of complex problems
B19	Will of continuous improvement
B21	To assess the importance of research, innovation and technological developments in the socio-economic and cultural progress of society
B22	Understand the importance of protecting the environment
C2	Have a good command of spoken and writing expression and understanding of a foreign language.
C4	Developing for the exercise of an open, educated, critical, committed, democratic and solidary citicenship, able to analyze reality, diagnose
	problems, formulate and implement solutions based on knowledge and oriented to the common good.
C6	Critically assessing the knowledge, technology and information available to solve the problems they face with.
C7	To assume as a professional and citizen the importance of learning throughout life.
C8	To assess the importance of research, innovation and technological development in the socio-economic and cultural progress of society.
C9	Appreciate the importance of research in environmental protection

	Methodologies
Methodologies	Description
Research (Research	Students apply the skills acquired (knowledge and techniques) throughout the program to solve specific problems in the field
project)	of research. Moreover, the translation of the results into a document, allows students to structure the information obtained, and
	compare with bibliographic data and be able to cross check and evaluate it.
Oral presentation	The presentation of Master's Thesis before a court gives the student the ability to prepare the defense of a project, public
	display in a clear and concise way and defend on the basis of the expertise or the experience of others.

	Personalized attention
Methodologies	Description
Oral presentation	Guidelines and answering questions that arise during the preparation of TFM.

project)	

		Assessment	
Methodologies	Competencies	Description	Qualification
Oral presentation	B4 C2 C6 C8	The student will defend his work before the court and will answer the questions that the court do. Also tutor's opinion will be taken into account for the final evaluation.	70
Research (Research project)	A1 A2 A3 A4 A5 A6 A7 A8 B1 B2 B3 B4 B7 B8 B9 B10 B11 B12 B13 B14 B17 B18 B19 B21 B22 C2 C4 C6 C7 C8 C9	The student will deliver a written report of his project.	30

Assessment comments

In the epigraph Oral presentation, besides the defense of the TFM (30%) and answer of the questions (30%), it is included the valuation on the part of the tutors, with a weight of 10 % of the qualification.

The evaluation criteria are the same for each opportunity.

Subjects that continue the syllabus
Other comments

To help achieve a sustained immediate environment and meet the objective of action number 5: "Healthy and sustainable environmental and social teaching and research" of the "Green Campus Ferrol Action Plan": The delivery of the documentary work carried out in this subject: They will be requested in virtual format and/or computer supportIt will be done through Moodle, in digital format without the need to print them. If it is necessary to make them on paper: Plastics shall not be usedRecycled paper will be used. Printing of drafts shall be avoided. A sustainable use of resources and the prevention of negative impacts on the natural environment must be made.
