| Descrición xeral | The overall aim of the course is to provide an understanding of the engineering and mathematical analyses that form the basics of monitoring and decision support systems used for onboard/navigational guidance of ships. These techniques are used by naval architects and engineers in the technical departments of ship owners, in classification societies and ship consultancies. Moreover, the student will be trained in advanced methods to evaluate ship operations with regards to the increased focus on energy consumption and emissions from ship. | | | |

Competencias / Resultados do título

| Código | Competencias / Resultados do título |
|--------|-------------------------------------|
| | |

Resultados da aprendizaxe

| Resultados de aprendizaxe | Competencias / Resultados do título | | |
|---|-------------------------------------|---|---------------------------------|
| Understanding of monitoring and decision support systems used for onboard/navigational guidance of ships and capability to evaluate and optimize ship operations with regards to energy consumption and emissions and safety. | AM6 | BM1 BM2 BM3 BM4 BM5 BM6 BM7 BM10 BM11 BM12 | CM2 CM3 CM4 CM6 CM7 |

Contidos

| Temas | Subtemas |
|--------------------------------|---|
| Random processes | Mathematical representation and tools for analysis of stochastic processes (time and frequency domains); ocean waves. |
| Modelling of dynamical systems | State space and input-output models for linear systems; response amplitude operators. |
| Seakeeping | Methods for computation and assessment of ship responses in waves; motions, loads and fuel consumption. |
| Signal processing | Methods and tools for processing of noisy signals in the time and frequency domain. |
| Estimation theory | Parametric methods for estimation of signals; Kalman filtering and particle filtering; sea state estimation. |
| Detection theory | Statistical learning; detection methods for Gaussian and non-Gaussian processes. |

| | |
|--------------------------|---|
| Decision support systems | Design of decision support systems; human factors; study cases on safe marine operations and fuel efficiency. |
|--------------------------|---|

*Os datos que aparecen na táboa de planificación son de carácter orientativo, considerando a heteroxeneidade do alumnado

| Metodoloxías | |
|---------------------------|--|
| Metodoloxías | Descrición |
| Sesión maxistral | <p>Oral presentation (using audiovisual material and student interaction) designed to transmit knowledge and encourage learning. Presentations of this type are variously referred to as ?expository method?, ?guest lectures? or ?keynote speeches?.</p> <p>In this course, these presentations will be made by different professors, both from the UDC and from DTU.</p> |
| Proba mixta | Mixed test consisting of essay-type and objective test questions. Essay section consists of open (extended answer) questions; objective test may contain multiple-choice, ordering and sequencing, short answer, binary, completion and/or multiple-matching questions. |
| Traballos tutelados | <p>Supervised learning process aimed at helping students to work independently in a range of contexts (academic and professional). Focused primarily on learning ?how to do things? and on encouraging students to become responsible for their own learning.</p> <p>In this course, the supervised project will consist on a group based technical report based on an assignment done by the professors, and dealing about some of the topics of the course. This report may be presented in front of the rest of students. This fact will be announced in Moodle/Teams at the beginning of the course.</p> |
| Presentación oral | <p>Core component of teaching-learning process involving coordinated oral interaction between student and teacher, including proposition, explanation and dynamic exposition of facts, topics, tasks, ideas and principles.</p> <p>In this course, the oral presentation will consist on the presentation of the technical report in front of the rest of students and the professors.</p> |
| Prácticas a través de TIC | <p>Practice-based learning method for theoretical subject content using ICT resources (demonstrations, simulations, etc.) ICT is an excellent medium for practical knowledge applications and information processing, and a key aid to student learning and skills development.</p> <p>In this course, MATLAB will be used to implement some of the systems described during the theoretical lectures.</p> |

| Atención personalizada | |
|------------------------|------------|
| Metodoloxías | Descrición |
| | |

| | |
|---------------------------|---|
| Sesión maxistral | The professors will provide personalized attention to the students both personally and remotely using MS Teams or email. |
| Traballos tutelados | |
| Prácticas a través de TIC | In this course, this personalized attention will consist on support while developing the supervised projects, the ICT practicals and doubts and questions related to the contents elaborated during the lectures. |

| Avaliación | | | |
|---------------------|---|---|---------------|
| Metodoloxías | Competencias / Resultados | Descrición | Cualificación |
| Traballos tutelados | A6 B2 B3 B4 B5 B6 B7 B8 B11 B13 C2 C3 C4 C7 | The qualification of the group based technical report will represent a 40 % of the student's final qualification. In case the oral presentation is not finally programmed, the percentage of the supervised projects will be 50 %. | 40 |
| Proba mixta | A6 B2 B3 B4 B6 B11 B13 C2 | The qualification of the theoretical exam of this course will represent a 50 % of the student's final qualification. | 50 |
| Presentación oral | B5 B13 C2 C3 C7 | In case the oral presentation is finally programmed, the percentage of its qualification will be a 10 %, including the presentation and the answers to the questions formulated by the professors and other students. | 10 |

| Observacións avaliación |
|--|
| <p>According to the degree regulations, the students will have the opportunity to pass this course in two opportunities (first and second opportunity). In order to pass the course, an overall mark of 5 out of 10 should be obtained by applying the percentages above to each of the methodologies, considering each of them evaluated in a scale from 0 to 10. At the beginning of the course, dates for presenting the technical reports and doing the oral presentation will be published in Moodle/ MS Teams. In the second opportunity, students will be able to repeat the exam and correct/modify the technical reports; however, in order to pass the course, both the technical report and the oral presentation should have been done in any case fulfilling the prescribed deadlines set during the course. General EMJMD Sustainable Ship and Shipping SEAS 4.0 evaluation rules:- Students will have only two opportunities to pass a course. If failing to do so, they may be forced to leave the degree.- No part time or lecture attendance exemption are allowed in this degree.</p> |

| Observacións |
|--|
| <p>To help in achieving a sustainable environment and to get the objective of number 5 action of the "Ferrol Green Campus Action Plan" (Healthy and environmentally and socially sustainable research and teaching): The assignments to be done in this course:- Will be required in digital format.- Will be delivered using Moodle, with no need to print them. In case it is necessary to print them:- Plastics won't be used.- Two side printing will be used.- Recycled paper will be used.- Printing drafts will be avoided. A sustainable use of the resources should be done, together with the prevention of negative impacts on the environment.&nbsp;</p> |
