

Teaching Guide				
Identifying Data				2023/24
Subject (*)	Regulation of gene expression	Code	610441006	
Study programme	Máster Universitario en Bioloxía Molecular, Celular e Xenética			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	First	Obligatory	3
Language	SpanishEnglish			
Teaching method	Face-to-face			
Prerequisites				
Department	Bioloxía			
Coordinador	Freire Picos, María Ángeles	E-mail	maria.freirep@udc.es	
Lecturers	Barreiro Alonso, Aida Inés Freire Picos, María Ángeles	E-mail	aida.barreiro@udc.es maria.freirep@udc.es	
Web	ciencias.udc.es/bcm			
General description	This course is focussed on the mechanisms of gene expression regulation in the nucleous and the cytoplasm as well as the cellular machineries involved in those processes.			

Study programme competences	
Code	Study programme competences
A1	Skills of working in a sure way in the laboratories knowing operation handbooks and actions to avoid incidents of risk.
A2	Skills of using usual techniques and instruments in the cellular, biological and molecular research: that are able to use techniques and instruments as well as understanding potentials of their uses and applications.
A3	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A5	Skills of understanding the microorganisms' role as pathogenic agents and as biotechnological tools.
A6	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A9	Skills of understanding the structure and dynamics of proteins to individual and proteomic level, as well as the techniques that are necessary to analyze them and to study their interactions with other biomolecules.
A10	Skills of modifying genes, proteins and chromosomes with biotechnological applications
A11	Skills of understanding the structure, dynamics and evolution of genomes and to apply tools necessary to his study.
A13	Skills to become a professional in health, pharmacy, veterinary, animal production, biotechnology or food sectors.
B1	Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.
B2	Skills of decision making for the problem solving: that are able to apply theoretical knowledges and practical acquired in the formulation of biological problems and the looking for solutions.
B3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions and to prepare reasoned reports on scientific and biotechnological questions
B5	Ability to draft, represent, analyze, interpret and present technical documentation and relevant data in the field of the branch of knowledge of the master's degree in the native language and at least in another International diffusion language.
B6	Skills of team work: that are able to keep efficient interpersonal relationships in an interdisciplinary and international work context, with respect for the cultural diversity.
B9	Skills of preparation, show and defense of a work.
C2	Ability to know and use appropriately the technical terminology of the field of knowledge of the master, in the native language and in English, as a language of international diffusion in this field
C3	Using ICT in working contexts and lifelong learning.
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

Learning outcomes	
Learning outcomes	Study programme competences

Skills of make presentations regarding the actual knowledge state in the field.	AR1	BR1	CC2
Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability	AR2	BR2	CC3
Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics	AR3	BR3	CC8
Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability	AR5	BR5	
Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability	AR6	BR6	
Skills of decision making for the problem solving: that are able to apply theoretical knowledges and practical acquired in the formulation of biological problems and the looking for solutions.	AR9	BR9	
	AR10		
	AR11		
	AR13		
-Skills to be critical with the results and the hypothesis as well as evaluation and interpretation of results .	AR13	BR1 BR2	CC2 CC8

Contents	
Topic	Sub-topic
Topic 1	Introduction to techniques and methodology to study the regulation of gene expression.
Topic 2	The transcriptional machinery in eukaryotes. Transcriptional general factors (TFII) and TAFs. The mediator complex and the complex SRB10 kinase.
Topic 3	The complexes that remodel chromatin. ATP-hydrolyzing complexes. SWI/SNF and ISWI complexes.
Topic 4	SAGA complex and counterparts. Acetylation and regulation of gene expression: HATs. The gene repression processes and deacetylation. The repression mechanisms of gene methylation.
Topic 5	Specific transcription factors. The signaling cascades and specific transcription factors. Nuclear receptors and transcriptional control.
Topic 6	New concepts in the regulation of gene expression. Transcription factories and other models.
Topic 7	RNA processing and nucleous-cytoplasm transport: the machinery of RNA cleavage and polyadenylation, transport across the Nuclear Pore Complex and factors involved. Cytosolic polyadenylation.
Topic 8	RNA secondary structures and protein-factors with RNA-binding domains in the regulation of mRNA levels. mRNA stability.
Topic 9	RNA and protein translation. Local protein translation. The 3'-UTRs in the translation efficiency process. RNA Editing.
Topic 10	micro and siRNAs in the regulation of Gene Expression: basic and applied aspects.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Seminar	A5 A6 A9 A10 A11 B3 B5 B6 B9 C2 C3 C8	2	8	10
Laboratory practice	A2 A1 A3 B1 B2	7	7	14
Guest lecture / keynote speech	A5 A6 A9 A10 A11	8	16	24
Problem solving	A13 B1 B2	2	8	10
Objective test	A5 A6 A9 A10 A11 A13 C2	2	14	16
Personalized attention		1	0	1

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Seminar	In september 18 th 2023 the III Jornada científica y divulgativa sobre RNA will be held in the Facultad de ciencias. Many contents of the different topics will be treated. Attendance is important. Alternatively, in those years without workshop, the students will prepare a scientific presentation about a subject related to the mechanisms of gene expression regulation and will present it to the class. The presentation will be followed by a debate.
Laboratory practice	Experimental work in the laboratory about genetic engineering and gene expression analysis.
Guest lecture / keynote speech	On september 18 th 2023 the III Jornada científica y divulgativa sobre RNA will be held in the Facultad de Ciencias. Many contents of the different topics will be treated. Attendance is important. Alternatively, for those years without these activity, magister lectures about the principal topics of the learning program will be given.
Problem solving	Learning based on problem solving. The students will have to solve a problem with the aid of previous information about the subject.
Objective test	The exam will include questions based in multiple option selection and also problems. This will allow to modulate the final qualification of each student

Personalized attention	
Methodologies	Description
Seminar Laboratory practice Problem solving	Students will be oriented before and during the preparation of seminars and the development of the practical course. They will involve interpretation of results. The problems and case solving will also need an orientation from the teachers.  Students with part-time dedication or waiver of presence should contact the teachers of the subject in the early going to establish a schedule of activities to acquire and evaluate in a complementary way the competences.  Titotial schedules: Pfra. Esperanza Cerdán Tuesday, wednesday and Thursday from 12.30 to 14.30  Pfra. M <sup>a</sup> Angeles Freire Monday 13-15 or previous appointment by e-mail. Some doubts may also be solved directly by e-mail.

Assessment			
Methodologies	Competencies	Description	Qualification
Seminar	A5 A6 A9 A10 A11 B3 B5 B6 B9 C2 C3 C8	Attendance and participation in the workshop &quot;III Jornada científica y divulgativa sobre RNA&quot;. Alternatively, those years without workshop, the students give their peers a seminar about sspecific aspects of work of other scientists on an issue related to regulation of gene expression. Half-presential students will have a specific activity combining the seminar contents and the problem solving	15
Laboratory practice	A2 A1 A3 B1 B2	The collection and management of information from databases and scientific suits available on the web. A practical case will be carried out by students.  It will also be a laboratory session focussed on a transcriptional regulation experiment.	25

Guest lecture / keynote speech	A5 A6 A9 A10 A11	Attendance and participation in the workshop &quot;III Jornada científica y divulgativa sobre RNA&quot;. Alternatively, those years without workshop, the theoretical knowledges will be taught and elaborated in magister clases, we will take into consideration the assistance to the theoretical clases and the student's participation.	10
Problem solving	A13 B1 B2	We will present problems on different subjects related with the gene expression regulation to verify if the students are able to use the information that was given to them, or other that they find, in order to solve them. Half-presential students will have a specific activity combining the seminar contents and the problem solving	25
Objective test	A5 A6 A9 A10 A11 A13 C2	It will consist in an exam that may include multiple answer questions, or case solving and will allow to modulate the student final evaluation note.	25

#### Assessment comments

Students with part-time dedication or waiver attendance may choose to be evaluated in a final exam if they do not qualify for continuous evaluation.

**Recommendations**

**Subjects that it is recommended to have taken before**

**Subjects that are recommended to be taken simultaneously**

- Molecular Techniques/610441002
- Advanced Cellular Biology/610441003
- Molecular Microbiology /610441011
- Protein Structure and Dynamics/610441012
- Bioinformatics and Biomolecular models /610441021

**Subjects that continue the syllabus**

**Other comments**

Is important that students had previously studied Genetics and/or Molecular Biology. Is important that the students attend to the personal tutorials to solve doubts.

Green Campus Science Faculty Program To contribute to achieving an immediate sustainable environment and comply with point 6 of the "Environmental Declaration of the Faculty of Sciences (2020)", the documentary work carried out in this area:

a. They will be requested mainly in virtual format and computer support.

B. To do on paper:- Plastics will not be used.- Double-sided prints will be made.- Recycled paper will be used.- Drafts will be avoided.

(\*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
