

Teaching Guide				
Identifying Data				2023/24
Subject (*)	Human Genetics	Code	610441017	
Study programme	Máster Universitario en Bioloxía Molecular, Celular e Xenética			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	2nd four-month period	First	Optional	3
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Bioloxía			
Coordinador	Gonzalez Tizon, Ana Maria	E-mail	ana.gonzalez.tizon@udc.es	
Lecturers	Gonzalez Tizon, Ana Maria Martinez Lage, Andres	E-mail	ana.gonzalez.tizon@udc.es andres.martinez@udc.es	
Web				
General description	This subject studies the organization, structure and function of the human genome, deepening the knowledge of human genetic diseases and identification of individuals. Current genomic analysis techniques for the study, isolation and mapping of genes and molecular diagnosis are addressed and discussed.			

Study programme competences / results	
Code	Study programme competences / results
A1	Skills of working in a sure way in the laboratories knowing operation handbooks and actions to avoid incidents of risk.
A6	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A8	Skills of having an integrated view of the previously acquired knowledge about Molecular and Cellular Biology and Genetics, with an interdisciplinary approach and experimental work.
A11	Skills of understanding the structure, dynamics and evolution of genomes and to apply tools necessary to his study.
A12	Skills to understand, detect and analyze the genetic variation, knowing genotoxicity processes and methodologies for its evaluation, as well as carrying out diagnosis and genetic risk studies.
B1	Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.
B3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions and to prepare reasoned reports on scientific and biotechnological questions
B5	Ability to draft, represent, analyze, interpret and present technical documentation and relevant data in the field of the branch of knowledge of the master's degree in the native language and at least in another International diffusion language.
B6	Skills of team work: that are able to keep efficient interpersonal relationships in an interdisciplinary and international work context, with respect for the cultural diversity.
B8	Critical reasoning skills and ethical commitment with the society: sensitivity in front of bioethical problems and to the ones related to the natural resource conservation
C1	Ability to express oneself correctly, both orally and in writing, in the official languages of the autonomous community
C9	Ability to manage times and resources: developing plans, prioritizing activities, identifying critical points, establishing goals and accomplishing them.

Learning outcomes			
Learning outcomes	Study programme competences / results		
Capacidade de realizar análise xenéticos tanto a nivel molecular como na identificación de enfermidades xenéticas mediante estudos familiares.	AR1	BR1	CC1
Capacidade de realizar diagnóstico xenético.	AR6	BR3	CC9
	AR8	BR5	
	AR11	BR6	
	AR12	BR8	

Contents	
Topic	Sub-topic
Lecture 1. THE HUMAN GENOME: SEQUENCE AND VARIATION	Functional elements Protein-coding genes Non-coding, RNA-only genes Repetitive elements Mitochondrial genome Genomic variability Epigenetics
LECTURE 3. CHROMOSOMES AND CLINICAL SYNDROMES	The human karyotype Mitotic and meiotic alterations: non-disjunction Changes in Number and structure of the chromosomes Mosaics
LECTURE 3. GENES AND CANCER	Oncogenes and tumor suppressor genes Germline mutations: familial cancer Somatic cancer genetics
LECTURE 4. FORENSIC GENETICS	DNA fingerprinting
LECTURE 5. EVOLUTION OF HUMAN POPULATIONS	Genetic diversity Mitochondrial and nuclear inheritance
LECTURE 6. GENETIC DISEASES	Familiar studies Mendelian inheritance Multiple alleles Complex inheritance Anticipation, expressivity, penetrance, mosaicism, mitochondrial inheritance and dynamic mutations HEREDABILITY
LABORATORY PRACTICES	1- Pedigrees 2- Genetic polymorphism analyses 3- Phylogenies

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Guest lecture / keynote speech	A6 A8 A11 A12 B1 B3 B5 B6 B8 C1 C9	12	18	30
Laboratory practice	A1 A6 A8 B1 B3 B5 B6 B8 C1 C9	14	7	21
Mixed objective/subjective test	B5 B1 C1	2	0	2
Practical test:	B1 B3 B5	2	0	2
Oral presentation	A12 A11 B1 B3 B5	2	14	16
Personalized attention		4	0	4

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Methodologies	Description
Guest lecture / keynote speech	In each class, contents related to different aspects of the syllabus will be exposed. The teacher will explain the fundamental contents of each topic and indicate the activities associated with it.
Laboratory practice	The practical classes will consist of an explanation on the part of the professor on the conceptual bases and the objectives to reach and the development of tasks on the part of the student. It is intended that the student has maximum autonomy, facilitating means and guidance.
Mixed objective/subjective test	Written test in which any aspect addressed in both theoretical and practical teaching will be discussed.
Practical test:	A written test will be carried out to evaluate the knowledge acquired during the laboratory practices
Oral presentation	Students will read one or two recent articles on genetic diseases and prepare a presentation that they will defend in a time of 10-12 minutes. The consulted bibliography will be valued, synthesis capacity, oral expression and argumentation.

Personalized attention

Methodologies	Description
Practical test: Oral presentation Laboratory practice Guest lecture / keynote speech Mixed objective/subjective test	Students: will request tutoring and will be attended via email or TEAMS. CONTINXENCE PLAN: in case of confinement, students will request tuition and it will be done via TEAMS or email

Assessment

Methodologies	Competencies / Results	Description	Qualification
Practical test:	B1 B3 B5	The knowledge acquired during the laboratory practices will be valued.	15
Oral presentation	A12 A11 B1 B3 B5	Students will prepare a 10-minute presentation on a topic related to any of the content covered in the subject.	30
Laboratory practice	A1 A6 A8 B1 B3 B5 B6 B8 C1 C9	It will be valued the knowledge about the meaning of the tasks carried out, and the interpretation of the results obtained.	15
Mixed objective/subjective test	B5 B1 C1	The domain of theoretical and practical concepts will be valued, clarity in the explanations, capacity to relate and integrate the information received treated in the magisterial sessions and in the laboratory and bioinformatics practices, and capacity to solve questions and problems.	40

Assessment comments

Laboratory practices are mandatory. To pass the subject, the student must obtain at least 50% of the score assigned to the mixed test and another 50% of that of the laboratory practices. It will be considered NOT PRESENTED when the student has not participated in more than 20% of the scheduled assessable activities. This criterion applies to the June call. In the July call, to obtain the grade NOT PRESENTED, it will be enough to not appear for the objective tests (theory and practical exams). For the evaluation of the July call, the student, in addition to the theory and practical exams, must present the power point presentation of the oral presentation. In the event that this activity was already evaluated in the previous call, the grade obtained will remain for July. For students with part-time dedication and exemption from attendance, the teacher will adopt the measures that he deems appropriate to avoid damaging her grade (flexibility in the delivery dates of the assessable activities). Instead of the oral presentation, these students will make a 2-3 page summary that must be delivered in pdf to the teacher for evaluation.

The fraudulent performance of the tests or evaluation activities will directly imply the application of the current regulations of the UDC

Sources of information

Basic	<ul style="list-style-type: none"> - T Strachan, AP Read (2010). Human Molecular Genetics 4th ed.. Garland Science - Pasternak, Jack (2005). An introduction to human molecular genetics. Hoboken, New Jersey. John Wiley & Sons - Strachan, T. & Read, A.P. (2004). Genética Molecular Humana (3ª ed). McGrawHill, México. <p>Nesta materia, os profesores recomendarán artigos científicos de revisión, publicados recentemente, para que o alumnado dispoña de bibliografía e referencias actuais sobre cada un dos temas da materia. Os artigos estarán aloxados na plataforma moodle dende o primeiro día de clase.</p>

Recommendations

Subjects that it is recommended to have taken before

Subjects that are recommended to be taken simultaneously

Immunology/610441009

Stem Cells and Cell Therapy/610441010

Subjects that continue the syllabus

Cellular Techniques/610441001

Molecular Techniques/610441002

Genetic Variation Mechanisms/610441005

Other comments

Attendance at lectures makes it possible to deal with any doubts or questions that may arise in the course of the explanations, facilitating the understanding of the subjects. Study should include regular reading of at least the recommended bibliography. Group study and work favours understanding and develops a critical spirit. The doubts and difficulties that arise in any aspect of the subject will be resolved as soon as possible, raising them in the classroom or attending individual tutorials. Given that part of the recommended bibliography for this subject is in English, it is recommended to have a good command of this language, at least at the level of comprehension of written texts.

Gender Perspective In this subject, the gender perspective will be taken into account, sexist attitudes will not be tolerated and the values of respect and equality will be promoted.

Program Green Campus

Empower of Sciences To help to achieve some sustainable immediate surroundings and fulfil with the point 6 of the Environmental Statement of the faculty of Sciences (2020), the documentary works that realise in this matter:

- a. They will request mostly in virtual format and computer support
- b. To realise in paper: -they will not employ plastic -will realise impressions to double expensive -will employ paper recycled -will avoid the realisation of drafts

The Environmental Statement is available in: https://ciencias.udc.es/images/Facultade/Green_Campus/Regulamento_Comit%C3%A9_Green_Campus_FCiencias.pdf

(*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
