| Methodologies   |
|---|
|   |
| Description   |
| Classroom lectures of 50 minutes. In the first hour of class we will explain the program of the subject and the teaching method |
| to be used. The following hours will be dedicated to impart the theoretical contents of the program.                            |
| Approach and resolution of problems and issues related to the topics developed in the lectures.                                 |
| Study of outcrops of rocky bodies and their forms and interpretation of their genesis and representation. Study of present and  |
| fossil geological processes and forms of relief.  |
| Development of the practical agenda with observations on selected material, use of classification criteria. Conceptual          |
| exercises.  |
| Exercise consisting of a list of questions about any content of the subject.  |
|   |

|                     | Personalized attention  |  |  |
|---------------------|---|--|--|
| Methodologies       | Description   The personalized attention in relation to these methodologies is conceived as moments of face-to-face work for students with  |  |  |
| Seminar             |   |  |  |
| Field trip          | the teacher, which implies a compulsory participation for the students. The form and the moment in which they will be   |  |  |
| Laboratory practice | developed will be indicated in relation to each activity throughout the course according to the work plan of the subject. The   |  |  |
|                     | solution of practical problems in workshops will serve to verify and guide the contents of the subject and its assimilation by the  |  |  |
|                     | students taking place in small groups. This monitoring can also take place in small groups during laboratory and field  |  |  |
|                     | practices.  |  |  |
|                     | Personalized attention can be carried out in a non-presential way through e-mail, Teams or the virtual campus. This non-presential modality will be developed mainly for students with part-time dedication or dispensation of assistance |  |  |

| Assessment    |                |             |               |

|                     | B10                | summarize information.   |    |
| Field trip          | A6 A22 A32 B8 B9   | The observations and attention will be evaluated, as well as the application of the        | 10 |
|                     |                    | knowledge when interpreting the observations by means of a Field Report.                   |    |
| Laboratory practice | A22 A30 A31        | The evaluation will come from the assistance and performance of the practices as well      | 10 |
|                     |                    | as practical tests during the lab course.  |    |
| Oral presentation   | A22 B8 B9          | Topics will be presented in the initial 40-45 minutes, and sessions will be finalized with | 70 |
|                     |                    | interactive activities that promote the students' reflection about the contents            |    |
|                     |                    | presented. The evaluation will consist of a written test.                                  |    |

Assessment comments

activities and an average mark of 5 out of 10. To qualify as a non-applicant (NP), it is sufficient not to take the regular final exam. Those who do not pass the course by means of continuous assessment activities must carry out the same type of activities autonomously, although under the supervision of the teaching staff. Both in the final exam and in the second opportunity in July, the grades of the activities passed previously will be maintained and only those not passed will have to be evaluated. - The evaluation of the theoretical contents (including geochronological scale) will be carried out by means of a written examination, in person or by telematic means if necessary. - The test of contents of the work in small group will consist of the resolution of a question similar to those formulated during the course by means of the use of bibliographic databases (Web of Science). - The evaluation of the laboratory work will consist of the delivery of a work on rock recognition - The evaluation of the field activity will consist of the delivery of a bibliographic work on the geological aspects of the study area chosen this course. Part-time or waived attendance students. These students must compensate for non-attendance to activities through the same system described. @font-face {font-family:"Cambria Math"; panose-1:2 4 5 3 5 4 6 3 2 4; mso-font-charset:0; mso-generic-font-family:roman; mso-font-pitch:variable; mso-font-signature:-536870145 1107305727 0 0 415 0;}p.MsoNormal, li.MsoNormal, div.MsoNormal {mso-style-unhide:no; mso-style-qformat:yes; mso-style-parent:"";

Attendance at 80% of all scheduled

To pass the course a minimum of 4.5 points is required in all

activities is mandatory.

Those who do not pass the course by means of continuous assessment activities must carry out the same type of activities autonomously, although under the supervision of the teaching staff. Both in the final exam and in the second opportunity in July, the grades of the activities passed previously will be maintained and only those not passed will have to be evaluated. - The evaluation of the theoretical contents (including geochronological scale) will be carried out by means of a written examination, in person or by telematic means if necessary. - The test of contents of the work in small group will consist of the resolution of a question similar to those formulated during the course by means of the use of bibliographic databases (Web of Science). - The evaluation of the laboratory work will consist of the delivery of a work on rock recognition - The evaluation of the field activity will consist of the delivery of a bibliographic work on the geological aspects of the study area chosen this course. Part-time or waived attendance students. These students must compensate for non-attendance to activities through the same system described.

## Sources of information

| Basic         | Recomendaranse textos durante o curso a medida que se necesiten durante a explicación teórica. Os textos                 |

Other comments

Green Campus program, Faculty of Scienceln order to help achieve an immediate sustainable environment and comply with point 6 of the "Environmental Declaration of the Faculty of Science (2020)", the documentary work carried out in this area:a. They will be requested mainly in virtual format and computer support.b. If on paper:- No plastics shall be used.- Double-sided printing shall be used.- Recycled paper shall be used.- The use of drafts will be avoided.A large part of the contents of the subject are directly related to sustainability: the study of energy sources, geological risks, climate change over time and its impact on living beings. The aim is to raise awareness among first-year students of the need to behave responsibly and be committed to sustainability in the faculty itself and in their personal life.Gender perspectiveIn this subject the gender perspective will be incorporated (non-sexist language will be used, bibliography of authors of both sexes will be used, the intervention of male and female students in class will be encouraged...).We will work to identify prejudices and sexist attitudes and will influence the environment to modify them and promote values of respect and equality.We will try to detect situations of gender discrimination and, if there are any, we will propose actions and measures to correct them.
