General description	Distribution patterns : the individual and the environment. The ecosystem.				

	Study programme competences	
Code	Code Study programme competences	
A1	Recoñecer distintos niveis de organización nos sistemas vivos.	
A17	Realizar bioensaios e diagnósticos biolóxicos.	
A20	Muestrear, caracterizar e manexar poboacións e comunidades.	
A21	A21 Deseñar modelos de procesos biolóxicos.	
A24	A24 Xestionar, conservar e restaurar poboacións e ecosistemas.	
A26	A26 Deseñar experimentos, obter información e interpretar os resultados.	
A30	A30 Manexar adecuadamente instrumentación científica.	
B4	B4 Traballar de forma autónoma con iniciativa.	
В6	B6 Organizar e planificar o traballo.	
B7	B7 Comunicarse de maneira efectiva nunha contorna de traballo.	
B8	Sintetizar a información.	
B12	Adaptarse a novas situacións.	

Learning outcomes			
Learning outcomes	Stud	y progra	amme
	со	mpeten	ces
To describe ecological concepts at the individual, population, community and ecosystem level.	A1		
	A24		
To discuss ecological concepts by critically considering the evidence in support of them.		B8	
To face with some success the specialised literature.	A30		
To use some basic techniques from the vast ecological methodology.	A17	B4	
	A20	В6	
	A21	B7	
	A26	B12	
	A30		

Contents	
Topic	Sub-topic
Section 1. Ecology and evolution	Unit 1. Introduction
	Unit 2. Evolution

Section 2. The individual and the environment	Unit 3: Generalities
	Unit 4. Responses to environmental variations.
	Unit 5. Responses & Daptations to: temperature, water, and light.
Section 3. The ecosystem	Unit 6. The ecosystem and its functioning.
	Unit 7. Production.
	Unit 8. Flow of energy
	Unit 9. Cycles and decomposition of matter.
	Unit 10. Global cycles.

	Methodologies
Methodologies	Description
Guest lecture /	Oral presentations to transfer knowledge and facilitate learning. Most of the graphical support of presentations is available in
keynote speech	the virtual campus (Moodle).
Seminar	Presentation and study of numerical models for a better understanding and resolution of ecological problems. Most models will
	be executed with UDC PCs if students do not have their own laptops.
Laboratory practice	For the students to learn effectively through the completion of practical activities in the field and/or in the laboratory.
Objective test	Partial exam (mid-term) on the theory taught.
Student portfolio	Reports of the activities developed in seminars and practices.
Objective test	Final exam: theory, seminars and practices

	Personalized attention
Methodologies	Description

Guest lecture /	Explanation of doubts emerging as the subject develops.
keynote speech	
Laboratory practice	
Seminar	Orientation and tuition to make the most of seminars.
Student portfolio	
	Orientation and tuition to make the most of practices.
	Help with preparing reports

Assessment comments	
---------------------	--

The final qualification will result from all evaluation activities and will include the three parts of the subject: Theory, Seminars and Practices; the contribution to the final grade will be 60%, 20%, and 20%, respectively. All students will have two opportunities to pass the course:

For the first opportunity, the student may choose one of the following evaluation modalities:

- 1. Continuous evaluation, including: partial exam, reports, and final exam (on a date set by the Faculty Board), with the following weighting:
- ? 60% Theory (30%partial exam + 30% final exam).
- ? 20% Seminars (10% deliverables + 10% final exam).
- ? 20% Practices (10% deliverables + 10% final exam).

Students delivering and/or taking the partial exam will be considered as opting for the continuous assessment. They will receive the grade for the exams taken and/or reports according to their weighting, and a grade of zero in those activities not attended.

2. Single evaluation: it will consist of a sole final exam with the following weighting: 60% Theory, 20% Seminars, and 20% Practices. Students opting for this single assessment in the first opportunity cannot obtain points from any of the continuous evaluation activities (nor reports neither partial exam).

As for the second opportunity, and regardless of the evaluation system previously chosen, there will be a single final exam; it will include questions on the three parts of the subject with the usual weighting: 60% Theory, 20% Seminars, and 20% Practices.

In order to pass the subject in whatever opportunity it is necessary to simultaneously pass each and every one of the three parts (Theory, Seminars and Practices); a failed part may be compensated with others if its qualification is at least 4/10. The average mark to pass the course is 5.0.

Attendance to Seminars and Practices is recommended but not mandatory, and will be recorded. Attendance does not imply opting for the continuous assessment mode, students may attend and opt for any of the assessment modalities.

Obtaining Honors will require a minimum final grade of 9.0 and the completion of all the tasks proposed for the continuous assessment.

Fraudulent performance of tests or evaluation activities will directly imply a fail grade of '0' in the course (both opportunities).

Students willing to benefit from the December call will be evaluated as for the second opportunity above.

Students with officially recognized academic exemption may carry out the proposed or equivalent activities online while receiving support by tutorials (face-to-face or online).
