|               | Methodologies |
|---------------|---------------|
| Methodologies | Description   |

| ICT practicals      | In which the student will observe the operation in practice of some of the theoretical contents explained in the lectures. In these practices, the student will use different tools (network equipment, network simulators, monitoring tools, etc.) proposed by the professors, which will allow them to deepen and strengthen their knowledge on different aspects of network security. In addition to the basic practices that all students will have to do, additional practices that interested students can do optionally will be proposed. |
|---------------------|--|
| Objective test      | At the end of the exposition of the subject, a test type exam will be carried out that will allow to assess the theoretical  |
|                     | knowledge and the practical skills acquired during the evolution of the course.  |
| Practical test:     | At the end of the ICT lab sessions, there will be an exam in which the student must demonstrate the acquired skills. Starting  |
|                     | from an initial scenario (non-secure network), the student will be asked to protect it using the strategies and techniques   |
|                     | discussed in the subject, especially in the practical laboratories.  |
| Long answer / essay | At the end of the exposition of subject and ICT lab sessions, there will be an exam in which the student in which he/she have  |
| questions           | to develop one or two themes, where the student must show an advanced comprenhesion about them or he/she must be able  |
|                     | to solve a complex problem.  |
| Guest lecture /     | In which the theoretical content of the syllabus will be exposed, including illustrative examples and with the support of  |
| keynote speech      | audiovisual media. The student will have the support material (notes, copies of the slides, articles, etc.) beforehand and the   |
|                     | teacher will promote an active attitude, recommending the previous reading of the topics to be discussed each day in class, as   |
|                     | well as asking questions that allow to clarify concrete aspects and leaving open questions for the reflection of the student.  |
|                     | The master sessions will be complemented with conferences that will bring an external expert to discuss a topic in greater   |
|                     | depth.   |

|               | Personalized attention   |
|---------------|--|
| Methodologies | Description  |
| CT practicals | Personalized attention during the practices will be used to guide and verify the work that students are doing according to the   |
|               | instructions given to them, depending on the specific practice in question.  |
|               | Individual office hours schedule is available at https://pdi.udc.es/es/File/Pdi/HB9HJ for Francisco Javier Nóvoa and             |
|               | https://www.uvigo.gal/es/universidad/administracion-personal/pdi/raul-fernando-rodriguez-rubio for Raúl Rodríguez Rubio          |
|               | All the professors of the subject will also propose a tutorial schedule in which the students can solve any doubt related to the |
|               | development of the same. Recommendations for the study of the subject The tutorials will be recommended as a fundamentation      |
|               | part of the learning support.  |

|                              |            | Assessment   |               |
|------------------------------|------------|--|---------------|
| Methodologies Competencies / |            | Description  | Qualification |
|                              | Results    |  |               |
| Practical test:              | A25 B21 C7 | At the end of the ICT lab sessions, there will be an exam in which the student must      | 30            |
|                              |            | demonstrate the acquired skills. Starting from an initial scenario (non-secure network), |               |
|                              |            | the student will be asked to protect it using the strategies and techniques discussed in |               |

Objective test

A25 B21 C7 C10

At the end of the exposition of the subject, there will be an objective test type test on the contents, both in the theoretical sessions and in the practical sessions.

## Assessment comments It will be necessary to obtain at least 50% of the grade to pass the subject. In addition to pass the subject, it will be necessary (at any opportunity) that the student obtains a minimum of 40% of the final mark in the objective test, essay questions and in the practices (ICT lab sessions and report). Otherwise, the maximum grade that can be obtained is 4.5. FIRST CALL - ORDINARY CALL The evaluation of the laboratory practices will be carried out by means of the realization of four practical reports related to the laboratory exercises and will have a total weight of 20% of the final mark. There will also be a practical exam that will have a weight of 30% on the final grade It will be necessary to obtain a minimum of 40% in practices (ICT lab sessions and exam) to pass the subject. 40% of the grade of the first call can be achieved by conducting an objective test (exam), which may contain questions related to the concepts developed in theory classes, practices, tutorials and basic bibliographic matherials. 10% of the remaining grade of the first call can be achieved by conducting an essay questions, which may contain questions related to the concepts developed in theory classes, practices, tutorials and basic bibliographic matherials. SECOND CALL - EXTRAORDINARY CALL The students may retain the mark obtained in the practices or the objective test of the first opportunity provided they have obtained an assessment equal to or greater than 50% of their weight in the final grade. The evaluation of the practices in the second call will be carried out by means of the practical test in the laboratory. 40% of the grade of the first call can be achieved by conducting an objective test (exam), which may contain questions related to the concepts developed in theory classes, practices, tutorials and basic bibliographic matherials. 10% of the remaining grade of the first call can be achieved by conducting an essay questions, which may contain questions related to the concepts developed in theory classes, practices, tutorials and basic bibliographic matherials. END-OF-PROGRAM CALL The evaluation of the practices will be carried out by means of a practical exam in the laboratory, at the end of the objective test of the extraordinary call. 40% of the grade of the first call can be achieved by conducting an objective test (exam), which may contain questions related to the concepts developed in theory classes, practices, tutorials and basic bibliographic matherials. 10% of the remaining grade of the first call can be achieved by conducting an essay questions, which may contain questions related to the concepts developed in theory classes, practices, tutorials and basic bibliographic matherials. STUDENTS WITH PARTIAL REGISTRATION OR WITH ACADEMIC DISPENSE OF TEACHING EXEMPTION: They should contact professors of the subject to enable the completion of tasks outside the usual organization of the subject.
