

Teaching Guide					
Identifying Data			2023/24		
Subject (*)	Computer Vision I Code 614544017		614544017		
Study programme	Máster Universitario en Intelixencia Artificial				
		Descriptors			
Cycle	Cycle Period Year Type Credits				
Official Master's Degre	ee 1st four-month period	First	Obligatory	3	
Language	English				
Teaching method	Face-to-face				
Prerequisites					
Department	Ciencias da Computación e Tecr	oloxías da Información			
Coordinador	Ortega Hortas, Marcos	E-mai	m.ortega@udc.e	m.ortega@udc.es	
Lecturers	De Moura Ramos, Jose Joaquim	E-mai	l joaquim.demoura	joaquim.demoura@udc.es	
	Ortega Hortas, Marcos	arcos m.ortega@udc.es		S	
Web					
General description	The main objective of this compu	lsory subject is to set the base	es that the different process	ses for the interpretation of	
images entail (image formation, preprocessing, segmentation and feature detection) so that students have the minimum					
	knowledge necessary for the app	lication of different techniques	of AI in computer vision. In	n addition to the study and	
	application of fundamental techni	ques, practical applications of	these techniques to solve	real problems will be studied.	
	This subject provides the necessary tools to apply the algorithms used in practical cases, as well as the bases to develop			as well as the bases to develop	
	new algorithms and continue with the study of more advanced methods.				

	Study programme competences / results
Code	Study programme competences / results
A24	CE23 - Understanding and command of basic concepts and techniques of digital image processing
A25	CE24 - Ability to apply different techniques to computer vision problems
A26	CE25 - Knowledge and ability to design systems for detecting, classifying and tracking objects in images and video
A27	CE26 - Understanding and command of the multiple ways to represent images and signals in terms of their associated data and their main
	features
B1	CG01 - Maintaining and extending theoretical foundations to allow the introduction and exploitation of new and advanced technologies in
	the field of AI
B3	CG03 - Searching and selecting that useful information required to solve complex problems, with a confident handling of bibliographical
	sources in the field
B5	CG05 - Working in teams, especially of multidisciplinary nature, and being skilled in the management of time, people and decision making
B6	CB01 - Acquiring and understanding knowledge that provides a basis or opportunity to be original in the development and/or application of
	ideas, frequently in a research context
B7	CB02 - The students will be able to apply the acquired knowledge and to use their capacity of solving problems in new or poorly explored
	environments inside wider (or multidisciplinary) contexts related to their field of study
B10	CB05 - The students will acquire learning abilities to allow them to continue studying in way that will mostly be self-directed or autonomous
C2	CT02 - Command in understanding and expression, both in oral and written forms, of a foreign language
C3	CT03 - Use of the basic tools of Information and Communications Technology (ICT) required for the student's professional practice and
	learning along her life
C8	CT08 - Appreciating the importance of research, innovation and technological development in the socioeconomic and cultural progress of
	society

 results
 results

Know and understand the fundamental characteristics of the digital image and its forms of representation.	AC23	BC1	CC2
Know, understand and know how to apply digital image processing techniques.	AC24	BC3	CC3
Know, understand and know how to apply digital image analysis techniques.	AC25	BC5	CC8
Ability to apply different techniques to computer vision problems.		BC6	
		BC7	
		BC10	

	Contents
Торіс	Sub-topic
Introduction to computer vision.	
Programming environments and libraries for computer vision.	
Color spaces and preprocessing.	
Local operators.	
Fundamentals of image segmentation.	
Fundamentals of multiscale analysis.

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Guest lecture /	The teacher presents a topic to the students with the aim of providing a set of information with a specific scope. This teaching
keynote speech	methodology will be applied to the training activity " Theory classes".
Laboratory practice	The teaching staff of the subject poses to the students a problem or problems of a practical nature whose resolution requires
	the understanding and application of the theoretical-practical contents included in the contents of the subject. Students can
	work on the solution to the problems raised individually or in groups. This teaching methodology will be applied to the training
	activity "Practical laboratory classes" and may be applied to the training activity of "Problem-based learning
	sessions, seminars, case studies and projects".
Case study	Students are presented with a work scenario, real or fictitious, that presents a certain problem. Students must apply the
	theoretical-practical knowledge of the subject to find a solution to the question or questions raised. As a general rule, the case
	study will be carried out in groups. The different working groups will present and share their solutions.

Personalized attention		
Methodologies	Description	
Guest lecture /	The teaching staff will assist the students in individualized tutorial sessions dedicated to orientation in the study and the	
keynote speech	resolution of doubts about the contents and work of the subject.	

Assessment			
Methodologies	Competencies /	Description	
	Results		
Guest lecture /	A24 A25 A26 A27 B1	The part related to the presentation of the master sessions will be evaluated through	40
keynote speech	B3 B5 B6 B7 B10 C2	written tests and/or through the continuous evaluation of laboratory practices, which	
	C3 C8	will evaluate the adequacy of the proposed solutions to the problems, the quality of the	
		results obtained and the understanding of the techniques used.	
Case study	A24 A25 A26 A27 B1	Resolution of case studies. The adequacy of the proposed solutions to the problems,	60
	B3 B5 B6 B7 B10 C2	the quality of the results obtained and the understanding of the techniques used will	
	C3 C8	be assessed.	

Assessment comments

All assignment and test notes will be retained until the second chance. There the students will be able to repeat some of the assessment activities. The final grade will be the one calculated taking into account the maximum marks between the corresponding activities in both opportunities. A student will be classified as Absent if he / she does not present any assessment exercise or take any test at any of the opportunities. The total or partial copy of any exercise of practice or theory will suppose a fail in both occasions of the course, with a qualification of 0,0 in both cases.

Recommendations
Subjects that it is recommended to have taken before
Subjects that are recommended to be taken simultaneously
Subjects that continue the syllabus
Other comments

- It is recommended to keep up with the study of theory, the performance of practical exercises, and problem solving. We also consider it important to make good use of tutorials for the discussion of practical exercises and as a means of immediate resolution of doubts.- As reflected in the various regulations applicable to university teaching, the gender perspective should be incorporated into this subject (non-sexist language will be used, bibliography from authors of both sexes will be used, the intervention of male and female students in class will be encouraged...).- Work will be done to identify and modify sexist prejudices and attitudes, and we will influence the environment to change them and promote values of respect and equality.-Situations of discrimination on the grounds of gender should be detected and actions and measures should be proposed to correct them.
