| General description | The objective of the subject is to pro | ovide the theoretical co | oncepts and | d practical skills for | the development of intelligent |
| | techniques in the field of information provided by the execution of business processes, in order to improve and optimize | | | | |
| | their performance. The subject will be approached from a descriptive approach, in which the techniques that allow to know | | | | |
| | what has happened and not what is believed to happen; and predictive, in which the main challenges of predictive | | | | |
| | monitoring and techniques will be presented. | | | | |

| | Study programme competences / results |
|------|---|
| Code | Study programme competences / results |
| A8 | CE07 - Ability to understand the consequences of the development of an explainable and interpretable intelligent system |
| A9 | CE08 - Ability to design and develop secure intelligent systems, in terms of integrity, confidentiality and robustness |
| A10 | CE09 - Ability to obtain a deep knowledge about fundamental principles and models of quantum computing and to apply them for the |
| | interpretation, selection, evaluation, modelling and creation of new concepts, theories, uses and technological developments related to |
| | Artificial Intelligence |
| A12 | CE11 - Understanding and command of the main techniques and tools for data analysis, both from the statistical and the machine learning |
| | viewpoints, including those devised for large volumes of data, and ability to select those ones most suitable for problem solving |
| A14 | CE13 - Knowledge of computer tools in the field of data analysis and statistical modelling and ability to select those ones most suitable for |
| | problem solving |
| A15 | CE14 - Understanding and command of the main machine learning techniques, including those devised for big volumes of data. |
| | Understanding and command of basic concepts and techniques for information search and filtering in big collections of data. |
| A16 | CE15 - Knowledge of computer tools in the field of machine learning and ability to select those ones most suitable for problem solving |
| A17 | CE16 - Knowledge of the process and tools for processing and preparing data, from their acquisition, extraction, and cleansing to their |
| | transformation, loading, organisation and access |
| A20 | CE19 - Knowledge of the different environments where AI based technologies can be applied and awareness of their capability to provide |
| | a differentiating added value |
| A21 | CE20 - Ability to combine and adapt different techniques, extrapolating knowledge among different application domains |
| A22 | CE21 - Knowledge of the techniques that facilitate the efficient organisation and management of AI projects in real environments, including |
| | resources management and tasks scheduling and taking into account the concepts of knowledge dissemination and open science |
| A23 | CE22 - Knowledge of the techniques that facilitate the security of data, applications and communications and the derived consequences |
| | on different application domains in Al |
| A28 | CE27 - Understanding the significance of the entrepreneurial culture and knowledge of the resources within the enterpreneur person's |
| | means |
| A29 | CE28 - Appropriate knowledge of the concept of enterprise, its organisation and management, and of the different business sectors, with |
| | the goal of providing solutions from the AI perspective |
| A30 | CE29 - Being able to apply knowledge, abilities and attitudes to the business and professional world, by planning, managing and |
| | evaluating projects in the scope of AI |
| A31 | CE30 - Being able to set out, model and solve problems that require the application of AI methods, techniques and technologies |

| B1 | CG01 - Maintaining and extending theoretical foundations to allow the introduction and exploitation of new and advanced technologies in |
|-----|---|
| | the field of Al |
| B2 | CG02 - Successfully addressing each and every stage of an Al project |
| B4 | CG04 - Suitably elaborating written essays or motivated arguments, including some point of originality, writing plans, work projects, |
| | scientific papers and formulating reasonable hypotheses in the field |
| B5 | CG05 - Working in teams, especially of multidisciplinary nature, and being skilled in the management of time, people and decision making |
| В6 | CB01 - Acquiring and understanding knowledge that provides a basis or opportunity to be original in the development and/or application of |
| | ideas, frequently in a research context |
| В7 | CB02 - The students will be able to apply the acquired knowledge and to use their capacity of solving problems in new or poorly explored |
| | environments inside wider (or multidisciplinary) contexts related to their field of study |
| В9 | CB04 - The students will be able to communicate their conclusions, their premises and their ultimate justifications, both to specialised and |
| | non-specialised audiences, using a clear style language, free from ambiguities |
| B10 | CB05 - The students will acquire learning abilities to allow them to continue studying in way that will mostly be self-directed or autonomous |
| C5 | CT05 - Understanding the importance of the entrepreneurial culture and knowledge of the resources within the entrepreneur person's |
| | means |
| C8 | CT08 - Appreciating the importance of research, innovation and technological development in the socioeconomic and cultural progress of |
| | society |
| C9 | CT09 - Being able to manage time and resources: outlining plans, prioritising activities, identifying criticisms, fixing deadlines and sticking |
| | to them |
| | |

|---------------------|--|
| Methodologies | Description |
| Laboratory practice | They are aimed at students acquiring skills in the implementation and use of process mining techniques. The student will be |
| | exposed to a project that must be resolved throughout the subject and whose resolution requires the understanding and |
| | application of the theoretical-practical contents included in the contents of the subject. |
| | Therefore, in the laboratory practices a project-based learning methodology will be followed. Attendance at these laboratory practices is MANDATORY. |
| Guest lecture / | They are aimed at explaining the concepts and characteristics of process mining, with special emphasis on the type of |
| keynote speech | problems it solves and the different kinds of techniques that could be applied to solve each of them. In addition, in these |
| | |

Methodologies

| | A21 A31 A30 B2 B4 | that are the input to the process mining techniques and that the students will develop | |
| | B5 B9 B10 C8 C9 | throughout the subject. In practice classes, the students will have to solve the | |
| | | questions using the most appropriate techniques to obtain information about the | |
| | | process analytics. | |

Assessment comments

If the student sends the first installment of the project, it will be considered as presented in the subject.

SECOND OPPORTUNITY

The evaluation criteria of the theory and practice parts in the second opportunity will be exactly the same as for the ordinary opportunity. Therefore, in addition to passing the theory exam and the bulletins, in order to pass the subject it will be necessary to have attended the interactive practical sessions (with the attendance criteria indicated below).

ATTENDANCE CONTROL

Attendance at the interactive sessions is mandatory because they address key concepts of the subject, and the control of this attendance is done through signature sheets that will be covered at the end of each of the sessions. In addition, if less than 80% of the interactive practical sessions are attended, it will be considered that the subject has not been passed.

PLAGIARISM DETECTION

In the case of fraudulent completion of exercises or tests, the provisions of the "Rules of assessment, review and claim of qualifications for two undergraduate and university master's degrees of the University of Coruña" will apply.

| |
| Other comments |

Attendance at laboratory practices is mandatory, and furthermore, this participation should be active. In addition to this, additional time will be needed to work on the following aspects:1. Autonomous study of the concepts of process mining. The time dedicated to this study not only includes the time needed to prepare for the theoretical exam, but also the time needed to understand the theoretical concepts so that they can be correctly applied to solve problems.2. Project development. This time is necessary for the development of the project to be completed, beyond the progress that takes place in the practice sessions. During this time, it will be possible to internalize the way to solve the exposed problem, to the extent that in the practical sessions more emphasis is placed on understanding the problem and the types of techniques that are necessary to address it, while the details necessary to complete the problem should be done in the additional time of practical work.
