Identifying Data				2023/24
Subject (*)	Introduction to Quantum Computing		Code	614551004
Study programme	Máster Universitario en Ciencia e Tecnoloxías de Información Cuántica			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	First	Obligatory	3
Language	SpanishGalician			
Teaching method	Face-to-face			
Prerequisites				
Department	Ciencias da Computación e Tecnoloxías da InformaciónMatemáticas			
Coordinador	Moret Bonillo, Vicente	E-mail	vicente.moret@udc.es	
Lecturers	Cao Abad, Ricardo Moret Bonillo, Vicente	E-mail	ricardo.cao@udc.es vicente.moret@udc.es	
Web	n9.cl/kgd8x			
General description	Este curso pretende transmitir ao alumnado os conceptos fundamentais da Computación Cuántica, o formalismo matemático necesario para traballar con qubits, as vantaxes informáticas e computacionais da superposición cuántica e do enredo cuántico, e definir un marco que contemple a evolución dos sistemas.deterministas clásicos ata chegar a sistemas cuánticos, pasando por sistemas tipicamente probabilísticos. Unha vez establecido este marco, analizaranse conceptualmente algúns dos algoritmos de estimación cuántica e de fase máis relevantes. O desenvolvemento de programas informáticos que implementen estes algoritmos tratarase, en profundidade, noutra materia do módulo de computación cuántica.			

Study programme competences	
Code	Study programme competences
A3	CON_03 Know the physical bases that allow information to be coded and processed. Understanding of the new rules that Quantum Mechanics imposes for its processing.
A4	CON_04 Have knowledge of quantum computing, algorithms, circuits, their programming in different languages and accessible platforms.
B1	HD01 Analyze and break down a complex concept, examine each part and see how they fit together
B3	HD03 Compare and contrast and point out similarities and differences between two or more topics or concepts
B6	HD11 Prepare accurately the relevant questions for a specific problem.
B8	HD13 Improvise solutions in an innovative way to solve a problem.
B12	HD23 Communicate using the expected norms for the chosen medium.
B13	HD24 Actively participate in face-to-face activities in the classroom.
B14	HD31 Assign resources and responsibilities so that all members of a team can work optimally
B16	HD33 Set goals for the group to analyze the situation, decide what outcome is desired and clearly set an achievable goal.
C1	C1. Adequate oral and written expression in the official languages.
C2	C2. Mastering oral and written expression in a foreign language.
C3	C3. Using ICT in working contexts and lifelong learning.
C4	C4. Acting as a respectful citizen according to democratic cultures and human rights and with a gender perspective.
C7	C7. Developing the ability to work in interdisciplinary or transdisciplinary teams in order to offer proposals that can contribute to a sustainable environmental, economic, political and social development.
C8	C8. Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

Learning outcomes	
Learning outcomes	Study programme competences

Adquirir conocimientos de computación cuántica, algoritmia y circuitos cuánticos.	AJ3 AJ4	BJ1 BJ3 BJ6 BJ8 BJ12 BJ13 BJ14 BJ16	CJ1 CJ2 CJ3 CJ4 CJ7 CJ8
Programación en diferentes lenguajes y plataformas accesibles.	AJ3 AJ4	BJ1 BJ3 BJ6 BJ8 BJ12 BJ13 BJ14 BJ16	CJ1 CJ2 CJ3 CJ4 CJ7 CJ8
Adquirir conocimientos sobre aspectos de alto nivel en computación cuántica: diseño de máquinas cuánticas, simuladores cuánticos y arquitecturas.	AJ3 AJ4	BJ1 BJ3 BJ6 BJ8 BJ12 BJ13 BJ14 BJ16	CJ1 CJ2 CJ3 CJ4 CJ7 CJ8

Contents	
Topic	**Sub-topic**
Introducción	Historia de la computación cuántica Consideraciones generales Conceptos preliminares
Matemáticas de la Computación Cuántica	Números complejos Espacios vectoriales complejos Espacios de Hilbert
Reversibilidad y Arquitecturas Reversibles	Reversibilidad Aspectos energéticos de la reversibilidad Arquitecturas reversibles y entropía
Puertas Lógicas Reversibles y Cuánticas	Puertas lógicas clásicas Puertas lógicas reversibles Puertas cuánticas
Sistemas Categóricos, Probabilísticos y Cuánticos	Sistemas Categóricos Sistemas Probabilísticos Sistemas Cuánticos
Circuitos y Algoritmos Cuánticos	Circuitos cuánticos Algoritmo de Deutsch Algoritmo de Deutsch-Jozsa Algoritmo de Simon Algoritmos Híbridos
Consideraciones Finales	Análisis crítico Discusión Conclusiones

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A3 A4 B1 B3 B6 B8 B12 B13 B14 B16 C1 C2 C3 C4 C7 C8	10	50	60
ICT practicals	A4 A3 B1 B3 B6 B8 B12 B13 B14 B16 C1 C2 C3 C4 C7 C8	15	0	15
Personalized attention		0	0	0
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Explicación en el aula de los contenidos de la materia. Resolución de problemas y supuestos prácticos. Realización de seminarios interactivos.
ICT practicals	Resolución de problemas prácticos en entornos TIC. Realización en equipo de prácticas de laboratorio con simuladores cuánticos.

Assessment			
Methodologies	Competencies	Description	Qualification
Guest lecture / keynote speech	A3 A4 B1 B3 B6 B8 B12 B13 B14 B16 C1 C2 C3 C4 C7 C8	Evaluación continua de actividades realizadas individualmente. Evaluación continua de actividades realizadas en equipo. Prueba final de desarrollo de cinco preguntas cortas de la materia.	50
ICT practicals	A4 A3 B1 B3 B6 B8 B12 B13 B14 B16 C1 C2 C3 C4 C7 C8	Evaluación de prácticas individuales. Evaluación de prácticas realizadas en equipo.	50

Assessment comments
No se establece ninguna nota de corte, ni en Teoría ni en Prácticas. La nota final se obtendrá a partir de la siguiente ecuación: Nota_Final = 0.5 x (Nota_Teoría + Nota_Prácticas) Para aprobar la asignatura, se tiene que cumplir que Nota_Final sea mayor o igual a 5.00 puntos.

Sources of information

Basic	- Noson S. Yanofsky, Mirco A. Mannucci (2009). Quantum Computing for Computer Scientists. Cambridge University Press - Richard P. Feynman (2001). Feynman Lectures On Computation. CRC Press After presenting the necessary prerequisites, the material is organized to look at different aspects of quantum computing from the specific standpoint of computer science. There are chapters on computer architecture, algorithms, programming languages, theoretical computer science, cryptography, information theory, and hardware. The text has step-by-step examples, more than two hundred exercises with solutions, and programming drills that bring the ideas of quantum computing alive for today's computer science students and researchers. After presenting the necessary prerequisites, the material is organized to look at different aspects of quantum computing from the specific standpoint of computer science. The text has step-by-step examples, more than two hundred exercises with solutions, and programming drills that bring the ideas of quantum computing alive for today's computer science students and researchers.
Complementary	The main focus of this textbook is the basic unit of information and the way in which our understanding of this has evolved over time. In particular the author covers concepts related to information, classical computing, logic, reversible computing, quantum mechanics, quantum computing, thermodynamics and some artificial intelligence and biology, all approached from the viewpoint of computer sciences. The main focus of this textbook is the basic unit of information and the way in which our understanding of this has evolved over time.
