General description	The first objective of the course is to provide students with basic knowledge in the field of symbolic artificial intelligence						
	systems: search, resolution, representation and reasoning. The second objective of the course is to provide students with basic knowledge in the field of subsymbolic artificial						
					of subsymbolic artificial		
	intelligence systems.						
	The knowledge acquired will allow them to consider these systems as alternative computational tools that can be applied in						
	solving different types of problems.						

	Study programme competences			
Code	Study programme competences			
A21	Coñecemento e aplicación dos principios fundamentais e técnicas básicas dos sistemas intelixentes e a súa aplicación práctica.			
B1	Capacidade de resolución de problemas			
ВЗ	Capacidade de análise e síntese			
B5	Habilidades de xestión da información			
В9	Capacidade para xerar novas ideas (creatividade)			
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.			
C8	Valorar a importancia que ten a investigación, a innovación e o desenvolvemento tecnolóxico no avance socioeconómico e cultural da			
	sociedade.			

Learning outcomes	
Learning outcomes	Study programme
	competences

Conocimiento y aplicación de los principios fundamentales y técnicas básicas de los sistemas inteligentes y su aplicación	A21	B1	C6
práctica.		В3	C8
		B5	
		В9	

	Contents
Topic	Sub-topic Sub-topic
1. Introduction	1.1. An historical perspective
	1.2. Preliminary aspects
	1.3. General considerations
2. Problem-Solving	2.1. Introduction to solving problems in Al
	2.2. The state space concept. Searching
	2.3. General characteristics of searching processes
	2.4. Uninformed search strategies
	2.5. Informed search strategies. Heuristic functions
	2.6. Local search
3. Structured Knowledge Representation	3.1. Introduction
	3.2. Declarative methods
	3.3. Procedural methods
	3.4. Examples and a practical case
4. Production Systems	4.1 Architecture: Knowledge base, active memory, inference engine
	4.2. Dynamics of rule production systems
	4.3. Basic cycle of a production system
5. A Brief Introduction to Reasoning in Al	5.1. Introduction
	5.2. Categorical model
	5.3. Bayesian reasoning fundamentals
6. Connectionist Systems: Origin and Context; Biological	6.1 Historical Evolution and Precursors.
Fundamentals	6.2 Birth of Connectionist Systems.
	6.3. Biological Basis of the Adaptive Systems
	6.4. Adquisition and organization of the knowledge in Adaptive Systems.
7. Architecture, Feeding and Learning in Connectionist	7.1 Processing element in Connectionist Systems.
Systems	7.2 Comparison between the biological element and the formal one.
	7.3 Feeding and architecture of the Connectionist Systems.
	7.4 Learning in Connectionist Systems.
8. Feed-Forward Connectionist Systems	8.1. Adaline
	8.2. Perceptron
	8.3. Aplications
9. Other Models of Connectionist Systems	9.1 Self-organizing networks
	9.2. Other self-organizing models: Growing neural networks
	9.3. Hopfield network.
10. New approaches in Sub-Symbolic Artificial Inteligence	10.1 Evolutionary Computation.
	10.2 Artificial Life.
	10.3 NBIC Technologies.

Planning				
Methodologies / tests	Competencies	Ordinary class	Student?s personal	Total hours
		hours	work hours	
Laboratory practice	A21 B1 B5	20	0	20

Supervised projects	B3 B9	10	20	30
Guest lecture / keynote speech	C6 C8	30	60	90
Personalized attention		10	0	10

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies		
Methodologies	Description		
Laboratory practice	- Using Symbolic Artificial Intelligence techniques to solve problems.		
	- Using Subsymbolic Artificial Intelligence techniques to solve problems.		
Supervised projects	- Study of the different models of symbolic intelligent systems and identification of the concepts involved in these models in		
	practical application examples.		
	- Search, analysis of real problems that show the application of Sub-symbolic Intelligence Artificial Systems.		
Guest lecture /	Imparting of the contents of the different topics of the subject, encouraging the participation of students in the understanding of		
keynote speech	practical examples.		

Personalized attention		
Methodologies Description		
Laboratory practice Personalized attention to practices in the classroom and for TGR will be developed.		
Supervised projects		

Assessment			
Methodologies	Competencies	Description Qualificat	
Guest lecture /	C6 C8		60
keynote speech		Written exam to assess knowledge of the matter.	
Laboratory practice	A21 B1 B5	- Only work submitted before deadline of students who have attended the hours	30
		assigned to the practices are scored.	
Supervised projects	B3 B9	- Only work submitted before deadline of students who have attended the hours	10
		assigned to the TGR are scored.	

Assessment comments

In order to pass the subject will be required to pass the exam of theory and also achieve at least 5 points after adding the note of written exam, with the notes of practice and TGR.

If a student, due to duly justified reasons, is unable to complete all the continuous assessment tests, they should communicate with their professors to establish dates for defending the practical exercises and assignments.

Second call

The grade obtained in the practical exercises throughout the course will be maintained, as well as its weight in the final grade. The exam will be conducted under the same conditions as in the first call, with the same weight in the final evaluation and requirements for calculating the average. Attendance Exemption:

In case of attendance exception, students will take the exam under the same conditions as the students in the first examination session. Plagiarism:

The fraudulent completion of tests or assessment activities, once proven, will result in an automatic failing grade in the examination in which it was committed: the student will be given a grade of "suspenso" (numeric grade 0) in the corresponding academic year's examination, whether the offense occurs in the first opportunity or the second. To this end, the student's grade will be modified in the first opportunity's record, if necessary.

No-Shown:

Students who do not participate in the Objective Test will receive a grade of "No-Shown."

Recommendations

Subjects that it is recommended to have taken before

Programming I/614G01001

Programming II/614G01006

Algorithms/614G01011

Programming Paradigms/614G01014

Software Design/614G01015

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Knowledge Representation and Automatic Reasoning/614G01036

Intelligent Systems Development/614G01037

Machine Learning/614G01038

Computer Vision/614G01068

Other comments

It is necessary to know the programming language Java in order to carry out the practicum of the first part of the course. Work will be done to identify and modify sexist prejudices and attitudes and influence the environment to modify them and promote values of respect and equality. Inclusive language will be used in the material and in the development of the sessions.
