|                     | Methodologies   |
|---------------------|---|
| Methodologies       | Description   |
| Guest lecture /     | Theoretical teaching of the subject matter of the course  |
| keynote speech      |   |
| Laboratory practice | Solve a practical problem by using the different techniques that will be explained in the theory classes.   |
| Supervised projects | Writing, under the supervision of the teacher, of the report explaining the resolution of the problem carried out in the laboratory practices and the results obtained. |
| Objective test      | This is a written assessment test in which the student must demonstrate the knowledge acquired from the subject.  |

|                     | Personalized attention   |  |
|---------------------|--|--|
| Methodologies       | Methodologies Description  |  |
| Supervised projects | Supervised projects Practical work carried out with the advice of the teacher.         |  |
| Laboratory practice | Laboratory practice Writing of the explanatory report under the teacher's supervision. |  |
|                     |  |  |

|               |                | Assessment  |               |
|---------------|----------------|-------------|---------------|
| Methodologies | Competencies / | Description | Qualification |
|               | Results        |             |               |

| Objective test      | A45 C7 C8 | Test questions about the contents of the course, based on the different computer learning techniques and their applications.   | 50 |
|---------------------|-----------|--|----|
| Supervised projects | A45 C2 C6 | Writing of the report on the resolution of the real problem carried out in the laboratory practices. The writing of the report will include a bibliographic review of the most important works related, written in English for the most part, documentation on the problem to be solved, methodology used, and comparison of the results found in the application of the different techniques, as well as a critical evaluation of both the results obtained and the information used. | 25 |
| Laboratory practice | A45 B1 B9 | Resolution of a real world problem using the methodology, for which several techniques explained in theory will be used, and the student will be stimulated to generate new ideas for the resolution of this problem.  | 25 |

## **Assessment comments**

In order to pass the subject, the student must obtain a minimum score of 5 out of 10 in the result of combining the grades of the objective test, the laboratory practices and the supervised works. In addition, the student must obtain a minimum score of 2 out of 5 points in the objective test. If the student does not obtain this minimum grade, the grade of the subject will be that corresponding to the grade of the objective test.

In the second opportunity, the grade obtained in the laboratory practices and supervised works will be maintained, not being able to obtain again a grade since it results from the continuous evaluation of the work during the credits of practice of the subject. The student can retake the examination of the objective test, the criteria for obtaining the total score being those indicated at the beginning of this section.

Part-time students must deliver in their reports on the same dates as full-time students, and attend the RGTs in which they will be corrected. Similarly, it is recommended that they attend the practice classes.

No-show qualification:

The student will receive the qualification of "no-show" when he/she does not take the final exam.

Fraudulent performance of exercises or tests:

For cases of fraudulent performance of exercises or tests, the provisions of the current regulation of the UDC about this topic will apply.
