General description	The objective of this subject is to introduce the student both in theory and especially in the practice of developing tourism development plans of destination and products. In this sense we will dedicate a part of the teaching to an introduction to the bases and methods of planning to, in the practical part, develop a complete planning process by applying the theoretical bases and the methodologies proposed to a case to be chosen by the student: either a specific tourist product or a tourist destination. This subject has a certain professionalizing nature insofar as it is intended for the direct exercise of a planning of the tourist activity, but at the same time has a research component in the way that involves the application of methodologies for the collection and treatment of information. It is also key in the sense that it provides the basis for later focusing on the study of the various models of tourist product.

Methodologies	
Methodologies	Description
Introductory activities	At the beginning of each topic will identify the main objectives that are intended to be achieved, the logical sequence that will be followed in the presentation of contents, the prior knowledge recommended to facilitate the learning process and the specific bibliography.
Guest lecture / keynote speech	Every week in person, the basic knowledge of the subject will be explained, using audiovisual media and documentary sources as support. In these sessions the active participation of students will be necessary to facilitate the teaching-learning process. In the case of face-to-face students, they will have the presentations and materials necessary for the follow-up of the explanations in class and will be directly tutored. In the case of online students, the presentations will be accompanied by audio and video files with the necessary explanations by Teams app. In this case the tutoring will be by Teams, mail telephone and skype.
Document analysis	From the subject's agenda, audiovisual or bibliographic material will be provided as a reference for developing some basic questions that the student must resolve in order to deliver to the teacher
Collaborative learning	Since what has been learned in the subject will result in the formulation of a plan, the sharing of the progress made in the plans that each student develops and the continuous debate on the proposals constitutes one of the best methods of collaborative learning. Each student will periodically comment on the peculiarities of their case and their progress, as well as respond and comment on the proposals of their peers.
Case study	One of the objectives of the subject is the elaboration of a critical analysis of an economic policy proposal, specifically the long-term plans proposed for Spain using the methodology and concepts explained in the subject.
Workshop	In the practical classes, under the supervision of the teacher and using the aforementioned methodologies (readings, analysis of documentary sources, discussions...) the student must perform a series of practical exercises.
Oral presentation	The proposal of plan prepared by each student will be presented and defended as the final task of the course.

Personalized attention	
Methodologies	Description
Guest lecture / keynote speech	Both the theoretical part of the subject and the practice and, especially, the case study within the latter, will be complemented with personalized attention from the students' consultations, providing guidance and support in the learning process, as well as motivating the expansion of knowledge following the interests. This activity will be carried out in person (in the teacher's tutoring schedules) or non-attendance (via email, Teams app, by telephone or skype)

Assessment			
Methodologies	Competencies	Description	Qualification

Case study	A1 A2 A3 A6 B3 B5 B4 B6 B8 B10 B9 C3 C8 C9	A substantial part of the subject matter will be evaluated by drafting a plan on a destination or product. Each student will choose a destination to develop a plan throughout the course so that each part of the process studied in the class has its reflection in it, both internal and external analysis and the proposal of strategies and products. In the same way, attempts will be made to implement the methodologies and techniques proposed in class. Both field work and the application of quantitative and qualitative techniques will be essential in these works.	50
Oral presentation	A5 A6 A10 A9 B3 B4 B6 B8 B9 C1 C2 C3 C5 C4	The final work on the development of a plan will be presented and defended. The objective of this defense is to present the final results of the work and comment on the proposals developed for the specific case that the student chose.	25
Document analysis	B6 B7 B8 B10 B9 B11 C1 C3 C5 C4	A part of the subject will be evaluated through the critical study and analysis of current plans. For example, both the current Spanish and Galician tourist plan will be studied. the end of this work and the analysis of the processes explained in the theory in the implementation of a concrete plan. Foreign students will be able to choose plans from their home country for this analysis	25

Assessment comments

The subject has an eminently practical character, therefore, the evaluation of the tourist planning work carried out by the student will be carried out. In this sense, a continuous evaluation can be considered, since the tasks developed will be periodically monitored to comment on progress and difficulties. In the case of face-to-face students, this monitoring will be done directly in the workshops where contact will be continuous. In the case of distance learning students, the work is individual, but follow-up will be done through a weekly contact through the Teams platform where both progress in the project and doubts will be raised. In the latter case, the defense of the project will be done electronically.

Other comments

1. The delivery of the documentary work carried out in this matter:a. It will be requested in virtual format and/or computer supportb. It will be done through Moodle, in digital format without the need to print them2. The importance of ethical principles related to sustainability values ??and personal and professional behaviors must be taken into account3. Work will be done to identify and modify prejudices and sexist attitudes, and the environment will be influenced to modify them and promote values ??of respect and equality4. The full integration of students who, for physical, sensory, psychological or socio-cultural reasons, experience difficulties in accessing appropriate, equal and profitable university life will be facilitated.
