General description	This subject introduces students t	to the systematic analysis of	urban data in its institution	al context, with a special focus on		
	the smart cities movement. It see	ks to provide a foundation in	systematic approaches to	collecting, analysing, modeling		
	and interpreting quantitative and qualitative data used to inform sound research applicable to urban planning and					
	management and policy making.					
	In addition to the thematic science of urban data and its analysis, theory and critical analysis of topics such as IoT, Big					
	Data, Cloud, Business Analytics, Social Media Mining and its role in the planning and management of the cities of the					
	future, and the role that technology, data and urban analytics can play in transforming cities, integrating emerging					
	challenges such as data ownership, privacy and ethics.					
	It also seeks to present and critically analyze the range of existing and necessary indicators for the measurement of					
	sustainability, quality of life and urban intelligence and the presentation of new metrics for the measurement of urban					
	intelligence, for the control of urban systems and for monitoring the urban environment.					

	Study programme competences / results
Code	Study programme competences / results
A7	CE4.1 - Understand the ongoing digital transformation processes, becoming familiar with analytical and urban modeling tools to apply
	them in decision-making processes (reactive and preventive) in urban planning and management, based on analytical information.
A8	CE4.2 - Plan and recommend intelligent information gathering systems in order to monitor sustainability, quality of life and urban intelligence.
B2	CB7 - That students know how to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
B3	CB8 - That students are able to integrate knowledge and face the complexity of making judgments based on incomplete or limited information, including reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
B5	CB10 - That students possess the learning skills that will enable them to continue studying in a manner that will be largely self-directed or autonomous.
B8	CG3 - To acquire high-level knowledge, tools and resources to meet the research and professional expectations of students and society in the study of urban development, planning and management.
C2	CT2 - Use the basic tools of information and communication technologies (ICT) necessary for the exercise of their profession and for lifelong learning.
C5	CT5 - Value the importance of research, innovation and technological development in the socioeconomic and cultural advancement of society.

Learning outcomes

Learning outcomes	Stud	y progra	amme
	con	npetenc	es/
		results	
Prepare professionals capable of participating in the construction of cities analytics, through the development of innovative	AC7	BC2	CC2
solutions for the collection, processing and analysis of city data that promote greater sustainability in its management and	AC8	BC3	CC5
governance in parallel with a more active and participatory citizenship.		BC5	
		BC8	

	Contents
Торіс	Sub-topic
1. Introduction to Smart Cities	Smart cities: context, challenges and opportunities.
2. Introduction to Sensorization	Sensorization: context, challenges and opportunities.
3. Exploring data and processing systems for urban	Exploratory data analysis. Systems for data processing in the urban environment.
environments	
4. Data processing and analysis for decision making	Data processing and business intelligence.
5. Applications and examples	Representative applications and smart city projects.

	Plannin	g		
Methodologies / tests	Competencies /	Teaching hours	Student?s personal	Total hours
	Results	(in-person & virtual)	work hours	
Laboratory practice	A7 A8 B8 B2 B3 B5	15	51	66

Personalized attention		5	0	5

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Laboratory practice	Carrying out practical activities, such as demonstrations, exercises, experiments and research.
Workbook	Reading of didactic material, viewing of videos and consultation of multimedia material.
Supervised projects	Carrying out work after searching and managing information, writing texts and preparing documents.
Seminar	Intensive study of a topic in a small group with discussion, participation, preparation of documents and conclusions that must
	be reached by all components of the seminar.

	Personalized attention
Methodologies	Description
Supervised projects	During the laboratory practices, supervised works, and seminars, the students will be able to present questions, doubts, etc.
Seminar	The teacher, responding to her requests, will review concepts, solve new problems or use any activity that he considers
Laboratory practice	appropriate to resolve the issues raised.

		Assessment	
Methodologies	Competencies /	Description	Qualification
	Results		
Supervised projects	A8 B8 B2 B3 B5 C2	Continuous monitoring of student activity on a proposed topic. In case of impossibility	15
	C5	of follow-up, the work will be evaluated by means of the final exam.	

Seminar	A7 B8 B5 C5	Continuous monitoring of student participation in the seminar. In case of impossibility	15
		of follow-up, the work will be evaluated by means of the final exam.	
Laboratory practice	A7 A8 B8 B2 B3 B5	Completion of the proposed practices.	70
	C2		

Assessment comments

In order to pass the subject, it is a mandatory condition to present contributions in the three methodologies and that the final weighting of the three is equal to or greater than a 5 out of 10.

On the second opportunity, the same laboratory practices will be presented and, as it is not possible to continue monitoring the student, 30% of the grade will correspond to the final exam.

Specifically, the fraudulent performance

of tests or assessment activities, once proven, will directly result in the

grade of suspension in the call in which it is committed: the student will be

graded with "suspension" (numerical grade 0) in the corresponding

call for the academic year, whether the commission of the offense occurs in the

first opportunity or in the second. For this, your rating will be modified in

the first opportunity report, if necessary.

Recommendations
Subjects that it is recommended to have taken before
Subjects that are recommended to be taken simultaneously
Subjects that continue the syllabus
IoT and Ambient Intelligence Technologies for Building Smart Cities/630541013
Information Systems for Smart Cities/630541014
Other comments
Gender Perspective
-According to the different application
regulations for university teaching, the gender perspective will be
incorporated in this subject (non-sexist language will be used, bibliography
from authors of both sexes will be used, students will be encouraged to
participate in class)
- Work will be done to identify and modify
prejudices and sexist attitudes and influence the environment to modify them
and promote values of respect and equality.
-Situations of discrimination based on
gender must be detected and actions and measures will be proposed to correct
them.
