General description	The objectives of this subject will	be to know and	describe building s	services as compone	nts of a global system of the	
	building and its relationship with t	urban networks. I	Moreover, the sub	ject will be focused o	n understanding technical	
	principles and functional schemes which it is based building services so that the student could reach the ability to analyze					
	critically the requeriments and demands of building services; description of the installations components as well as to meet					
	the requirements of technical cod	les.				

	Study programme competences
Code	Study programme competences
A16	" Ability to conceive, calculate, design, integrate in buildings and urban units and execute supply systems, water treatment and
	sewage, heating and air conditioning (T) "
A17	Ability to apply technical and construction standards and regulations
A20	Ability to assess the construction works
A22	Ability to project building and urban transformers and power supply systems, audiovisual communication, acoustic conditioning and
	artificial lighting
A23	Ability to maintain systems
A26	Adequate knowledge of the physical and chemical characteristics, production procedures, pathology and use of building materials
A29	Knowledge of administrative, management and professional procedures
A31	Knowledge of methods of measurement, assessment and expert's report
A63	Development, presentation and public review before a university jury of an original academic work individually elaborated and linked to an
	of the subjects previously studied
B1	Students have demonstrated knowledge and understanding in a field of study that is based on the general secondary education, and is
	usually at a level which, although it is supported by advanced textbooks, includes some aspects that imply knowledge of the forefront of
	their field of study
B2	Students can apply their knowledge to their work or vocation in a professional way and have competences that can be displayed by mean
	of elaborating and sustaining arguments and solving problems in their field of study
В3	Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgements that include
	reflection on relevant social, scientific or ethical issues
B4	Students can communicate information, ideas, problems and solutions to both specialist and non-specialist public
B5	Students have developed those learning skills necessary to undertake further studies with a high level of autonomy
B10	Knowing the physical problems, various technologies and function of buildings so as to provide them with internal conditions of comfort
	and protection against the climate factors in the context of sustainable development
B12	Understanding the relationship between people and buildings and between these and their environment, and the need to relate buildings
	and the spaces between them according to the needs and human scale
C1	Adequate oral and written expression in the official languages.
C3	Using ICT in working contexts and lifelong learning.

C4	Exercising an open, educated, critical, committed, democratic and caring citizenship, being able to analyse facts, diagnose problems,
	formulate and implement solutions based on knowledge and solutions for the common good
C5	Understanding the importance of entrepreneurial culture and the useful means for enterprising people.
C6	Critically evaluate the knowledge, technology and information available to solve the problems they must face
C7	Assuming as professionals and citizens the importance of learning throughout life
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

	Methodologies
Methodologies	Description
Supervised projects	A work related of the subject program will be realized. The objective is that the student defines the facilities that are studied in
	an architectural Project. These works or practicums are conceived like a natural extension of the theoretical classes. Works
	are contemplated from a double perspective: as an opportunity to broaden and deepen the theoretical concepts acquired and
	as an exercise of applying these same concepts to specific cases, in which the student can experience the value of the
	learned criteria. Final practicum will be delivering at the end of the semester. Practicum will be carried out individually or in
	small groups.
	Attendance to practical classes is compulsory.
	Supervised projects will be developed with the same project within the subject and Workshop 8 (1,5 ECTS practicum outside
	the workshop and 1,5 ECTS in the workshop 8)

Objective test	Continuous assessment method will be used taking into account:						
	-attendance to classes, taking into account active attitude of the student in them.						
	-preparation and presentation of practicum						
	-exam of the subject						
	At the end of the semester on the date indicated by Head of Studies will take the examination (objective test) of the subject.						
Workshop	Supervised projects will be developed the same project as in systems 2 within workshop 8 (1,5 ECTS practicum outside the						
	workshop and 1,5 ECTS in the workshop 8)						
Guest lecture /	Oral sessions/lectures consist of the exposition by the lecturer of different contents of the subject. In them, students will be						
keynote speech	able to interact with the lecturer by raising doubts or questions. Lecturer, if appropriate, can prepare teaching material that will						
	constitute a guide to help the study of the subject, not exempt from the bibliography and, that does not suppose the minimum						
	content of the subject.						
	Attendance to theoretical classes is compulsory						

Personalized attention			
Methodologies	Description		
Supervised projects	Doubts raised by the student about theory and practical work will be answered.		
Workshop			

		Assessment	
Methodologies	Competencies	Description	Qualification
Guest lecture /	A16 A17 A20 A22	Attendance to theoretical and practical classes is essential and prior condition to	
keynote speech	A23 A29 A31 A63 B1	qualify the exam and practicum (minimum 80%).	
	B3 B4 B5 B10 B12 C1		
	C3 C4 C5 C6 C7 C8		
Supervised projects	A16 A17 A20 A22	Final grade requires continuous attendance (minimum 80%) and have passed both	20
	A23 A26 A29 A31	the theoretical part (minimum 5 points) and the supervised project/practicum	
	A63 B1 B2 B3 B4 B5	(minimum 5 points) of the subject. The final grade of the subject will be made up with	
	B10 B12 C1 C3 C4	the final exam (60%) and final grade of practicum (40%). In relation to the practicums,	
	C5 C6 C7 C8	assessment will take into account the clarity, precision, conceptual rigor,	
		appropriateness, environmental sensitivity, degree of problem solving and the	
		integration of the facilities in the building.	
		Assessment of this practicum is an integral part for the workshop assessment. This is	
		because practicum is done in the same project (total assessment 40%). Due to the	
		fact that a disgreggation is required for technical computer requirements it is marked	
		20%+20% but assessment could not be divided by parts (40%). The work done inside	
		the workshop and the work done outside of the workshop could not assess separately.	
		Here you can show this only for technical computer requirements.	
Objective test	A16 A17 A20 A22	It will consist of an examination at the end of the semester concerning theoretical and	60
	A23 A26 A29 A31	practical contents of the subject.	
	A63 B1 B2 B3 B4 B5		
	B10 B12 C1 C3		

Workshop	A16 A17 A20 A22	Supervised projects will be developed in the same project that it is used in systems 2	20
	A23 A26 A29 A31	within workshop 8 (1,5 ECTS of practicum outside the workshop and 1,5 ECTS inside	
	A63 B1 B2 B3 B4 B5	the worshop 8). Assessment of the total part of the practicum will be 40%, it is	
	B10 B12 C1 C3 C4	mandatory that you pass the theoretical part of the exam. You have to pass the	
	C5 C6 C7 C8	practical part in order to weight the final mark/grade (60% theory and 40% of	
		practicum)	
		Assessment of this practicum is an integral part for the workshop assessment. This is	
		because practicum is done in the same project (total assessment 40%). Due to the	
		fact that a disgreggation is required for technical computer requirements it is marked	
		20%+20% but assessment could not be divided by parts (40%). The work done inside	
		the workshop and the work done outside of the workshop could not assess separately.	
		Here you can show this only for technical computer requirements.	

Assessment comments

By the same procedure,

assessment in successive enrollments will be carried out. Assessment conditions are the same for the opportunity of June and July. Teaching to mobility students could be adapted, if the teacher considers it appropriate, to pedagogical conditions, special tests, as well as tests and evaluation exams. No passing partial qualifications (theory or practice, except for the July opportunity of the same academic year in which the partial qualification (theory or practice) will be saved. In order to pass the subject it is essential to pass the objective test, supervised project (practicum) and a minimum compulsory attendance to theoretical and practical classes.

In accordance with the memory of the degree at the end of each semester, an Assessment Board of the workshop will be summoned. This board will analyzed the global outcomes and authorised to settle about punctual situations of its subject. Students who do not pass after these two opprtunities of each call, will have to attend the following year in projects subject. In this case, students, moreover the projects, they will develop the works related to those subjects that they did not pass. Students with projects subject passed and failing other subjects embedded within the workshop, they will have to present, at the following calls and with the corrections requested, works in the workshop that they took part.

In accordance with the study curriculum, all the subjects belonging to the workshop must be attended at the same time in order to be assessed, at least in the first enrrolment. The non-compliance of this formal requirement will be marked as not submitted at the subject.
