

Teaching Guide

Identifying Data					2023/24
Subject (*)	Análise de Supervivencia e Probas Diagnósticas	Code	653862333d		
Study programme	Máster Universitario en Asistencia e Investigación Sanitaria (a distancia)				
Descriptors					
Cycle	Period	Year	Type	Credits	
Official Master's Degree	2nd four-month period	First	Optional	3	
Language	SpanishGalician				
Teaching method	Face-to-face				
Prerequisites					
Department	Ciencias da SaúdeFisioterapia, Medicina e Ciencias BiomédicasMatemáticas				
Coordinador	Jacome Pumar, Maria Amalia	E-mail	maria.amalia.jacome@udc.es		
Lecturers	Jacome Pumar, Maria Amalia Pértega Díaz, Sonia	E-mail	maria.amalia.jacome@udc.es s.pertega@udc.es		
Web					
General description	This subject has got two distinct blocks: Survival Analysis (2 ETCs) and Diagnostic Tests (1 ECT). The common purpose is to establish the methodological elements that the student needs to design, carry out and understand clinical-epidemiological studies in the field of Health Sciences that involve survival analysis or the evaluation of diagnostic tests				

Study programme competences / results

Code	Study programme competences / results

Learning outcomes

Learning outcomes	Study programme competences / results		
Skills to use the correct statistical procedures in a clinical research study.	AR6	BC1	CC1
	AR6	BC1	CC1
	AR6	BC1	CC1
		BC1	
		BC1	
		BC1	
		BC1	
Skills to know and apply specific analysis tools to analyze the validity and reliability of the results of diagnostic tests in clinical practice.	AR6	BC1	CC1
	AR6	BC1	CC1
	AR6	BC1	CC1
		BC1

Contents

Topic	Sub-topic
BLOCK 1. Survival Analysis	1.1. Introduction: types of censoring, main functions of interest. 1.2. Estimation of the survival curve: Kaplan-Meier estimator, important parametric models. 1.3. Comparison of survival curves 1.4. The proportional hazards model: Cox regression model. 1.5. The competing risk model.

BLOCK 2. Diagnostic test	<p>2.1. Validity and reliability of a diagnostic test: sensitivity, specificity, predictive values, likelihood ratios.</p> <p>2.2. Clinical implementation of Bayes's Theorem.</p> <p>2.3. ROC curves and the area under the ROC curve.</p>
PRACTICAL CONTENT	<p>1. Choice of the appropriate technique for data analysis, application of methods with statistical software, and interpretation of results.</p> <p>2. Application of epidemiological software for the analysis of the validity and reliability of diagnostic tests.</p> <p>3. Interpretation of results in the evaluation of diagnostic tests</p>

Planning

Methodologies	
Methodologies	Description
Online forum	Espazo de discusión informal destinado aos estudantes para o tratamento dun tema ou problema, que se desenvolverá a través dun contorno virtual de aprendizaxe mediante ferramentas de comunicación asíncrona (foro).
ICT practicals	Actividades prácticas que consistirán na aplicación dos contidos teóricos da materia mediante a utilización das tecnoloxías da información e as comunicacións. Empregarase software específico para a realización de estudos bioestatísticos ou epidemiolóxicos.
Problem solving	Plantexarase a resolución de situacións prácticas concretas, a partir dos coñecementos traballados na materia
Supervised projects	Traballos onde se reflicta o dominio teórico-metodolóxico da materia. Os traballos solicitaranse en formato virtual e soporte informático.
Guest lecture / keynote speech	Estudio dirixido a través de material multimedia, baseado na exposición dos coñecementos teóricos da materia apoiándose no uso de medios audiovisuais
Multiple-choice questions	Cuestionarios de preguntas tipo test e/ou preguntas curtas co propósito de controlar a evolución na materia
Case study	Exposición dunha situación específica que suscita un problema que ten que ser comprendido, valorado e resolto por os/as alumnos/as. Plantexaranse problemas concretos en relación cos contidos da materia que describan unha situación real e describírase o proceso de resolución.

Personalized attention

Methodologies	Description
Supervised projects Problem solving ICT practicals Online forum Case study	The personalized attention related to these methodologies aims to guide students in the study of the subject and in the realization of the proposed practical works. The follow-up will be done individually or in small groups, telematically, through email, the Virtual Campus or Teams.

Assessment

Methodologies	Competencies / Results	Description	Qualification
Supervised projects	A1 A5 B1 B2 B3 B4 B5 B6 B7 C1 C3 C8	Application of several statistical techniques to practical cases.	40
Problem solving	A1 A5 B1 B2 B3 B4 B5 B6 C3 C8	Concrete practical situations, that will have to be solved using the contents introduced in the subject	17.5
Multiple-choice questions	A1 A4 A5 B1 B2 B3 B4 B5 B6 B7 C1 C3 C8	Multiple choice and short answer questions to assess the progress for each unit of the subject.	42.5

Assessment comments

<p>Assessment system</p> <p>The subject is divided into two blocks: Block 1 (corresponding to Unit 1. Survival analysis) and Block 2 (corresponding to Unit 2. Diagnostic tests). Both blocks are independent, that is, one block's qualification is not affected by the other block's qualification.</p> <p>To pass the subject, it is necessary to pass both blocks separately. In that case, the final score will be the weighted sum of each block's qualification. In case of failing at least one block, the final score will be the minimum between the weighted sum of each block's qualification and the score 4.5</p> <p>The final mark will be "ABSENT" (NP) only in the case the student carried out none of the assessment activities.</p> <p>Concerning students of previous academic courses, the different former marks will not be kept in the current academic course.</p> <p>Block I (Unit 1. Survival Analysis)</p> <p>The highest score is 6.5 (out of 10), which comes from:</p> <p>Continuous evaluation (2.5 out of 10), consisting of solving problems and multiple-choice questions to be answered online individually. A supervised project (4 out of 10), which includes the application of several statistical techniques to practical cases. It can be individual or in groups of 2-3 people.</p> <p>Block II (Unit 2. Diagnostic test)</p> <p>The highest score is 3.5 (out of 10), which comes from:</p> <p>Continuous evaluation (1.75 out of 10), consisting of solving problems and/or multiple-choice questions related to the contents, to be answered online individually. Multiple-choice questions (1.75 out of 10), related to the contents, to be answered online individually. This assessment system will be applied in both the first and second call. December call</p> <p>The regulation in the " Assessment, review and complaint regulation of degrees and master studies of the UDC ", article 19, shall apply.</p> <p>High honors qualification (MH)</p> <p>Students whose final qualification exceeds 9 may be eligible for honors. The teachers of the subject may consider additional criteria in the results obtained by the students in any of the training actions programmed in the teaching guide.</p> <p>Fraud</p> <p>Fraud in tests or evaluation activities will directly involve the implementation of the current rules in the Assessment, review and complaint regulation of the UDC and the Student Statute of the UDC</p> <p>All these remarks are applied to the part-time students and/or with academic exemption.</p>

Recommendations

Subjects that it is recommended to have taken before

- Statistics Applied to Health Sciences/653862206
- Statistical Models for Clinical Research/6538623028
- Statistics Applied to Health Sciences/6538623005

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Other comments

English language It is advisable a basic knowledge of English for reviewing the available sources of information, although it is not mandatory. The recommended level of English is A2, as stated in the Common European Framework of Reference on Language Skills (http://cvc.cervantes.es/ensenanza/biblioteca_ele/marco/cvc_mer.pdf).<p>Gender perspective: According to the different regulations applicable to university teaching, the gender perspective must be incorporated in this subject (non-sexist language will be used, bibliography of authors of both sexes will be incorporated, ...).Sexist prejudices and attitudes will be identified and avoided, and values of respect and equality will be promoted. Work will be done to detect situations of gender discrimination and actions and measures will be proposed to correct them.
