General description	Study of processes, materials and to	echnologies for surface mo	dification of materials.	

	Study programme competences
Code	Study programme competences
B1	CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of
	ideas, often in a research context.
B2	CB7 - That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments
	within broader (or multidisciplinary) contexts related to their area of ??study.
В3	CB8 - That students are able to integrate knowledge and face the complexity of making judgments based on information that, being
	incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and
	judgments.
B4	CB9 - That the students know how to communicate their conclusions -and the knowledge and ultimate reasons that sustain them- to
	specialized and non-specialized audiences in a clear and unambiguous way.
B5	CB10 - That students have the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous
В6	G1 - Have adequate knowledge of the scientific and technological aspects in Industrial Engineering.
B13	G8 - Apply the knowledge acquired and solve problems in new or unfamiliar environments within broader and multidisciplinary contexts.
B14	G9 - Be able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited,
	includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments.
B15	G10 - Knowing how to communicate the conclusions -and the knowledge and ultimate reasons that sustain them- to specialized and
	non-specialized publics in a clear and unambiguous way.
B16	G11 - Possess the learning skills that allow to continue studying in a self-directed or autonomous way.
C1	ABET (a) - An ability to apply knowledge of mathematics, science, and engineering.
C2	ABET (b) - An ability to design and conduct experiments, as well as to analyze and interpret data.
C3	ABET (c) - An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic,
	environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
C6	ABET (f) - An understanding of professional and ethical responsibility.
C7	ABET (g) - An ability to communicate effectively.
C8	ABET (h) - The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and
	societal context.
C9	ABET (i) - A recognition of the need for, and an ability to engage in life-long learning.
C11	ABET (k) - An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

	Methodologies
Methodologies	Description
Guest lecture /	Oral presentation complemented with the use of audiovisual media and the introduction of some questions addressed to
keynote speech	students, in order to transmit knowledge and facilitate learning.
Laboratory practice	Methodology that allows students to learn effectively through the realization of practical activities, such as demonstrations,
	exercises, experiments and research.
Supervised projects	Methodology designed to promote the autonomous learning of students, under the tutelage of the teacher and in varied
	scenarios (academic and professional). It is referred primarily to the learning of "how to do things." It is an option
	based on the assumption by students of the responsibility for their own learning. This teaching system is based on two basic
	elements: the independent learning of the students and the monitoring of that learning by the tutor.
Objective test	Written test used to evaluate learning.

	Personalized attention
Methodologies	Description
Supervised projects	Student with full dedication:
Laboratory practice	la) Laboratory practices: Resolution of doubts during the practice sessions.
	b) Supervised projects: Monitoring the work of the student during the development of the proposed supervised projects.
	Part-time students:
	la) Laboratory practices: Resolution of doubts during the practice sessions.
	b) Supervised projects: Monitoring the work of the student during the development of the proposed supervised projects.

		Assessment	
Methodologies	Competencies	Description	Qualification

Supervised projects	B1 B2 B3 B4 B5 B13	Projects done by the student.	70
	B15 B14 B16 C1 C2		
	C3 C6 C7 C8 C9		
Laboratory practice	B1 B2 B3 B5 B13 B14	Practices carried out by the student.	10
	B6 C3		
Objective test	B1 B2 B3 B4 C1 C11	The objective test consists of passing a final exam that includes all the contents seen	20
		throughout the course.	

Assessment comments

The final test will cover all the contents of the subject.

Attendance at the laboratory is mandatory and must be done during the first year of enrollment. The practice note will be maintained. Unjustified faults are not allowed.

Second opportunity will be evaluated on the same terms as the first opportunity.

The students with recognition of part-time dedication according to the "Standard that regulates the regime of dedication to the study of the students of Degree in the UDC" will have to put it in knowledge of the coordinator of the subject. The evaluation will be carried out in the same terms as that of full-time students. The possible academic exemption of class attendance exemption will not be applicable in the laboratory practices, which must attend compulsorily and at the established time, as well as the corresponding final exam.

Other comments

To help achieve a sustained immediate environment and comply with the objective of action number 5: "Healthy and sustainable environmental and social teaching and research" of the "Green Campus Ferrol Action Plan": The delivery of the documentary works that are made in this matter: They will be requested in virtual format and / or in computer supportDelivery will be made through Moodle, in digital format without the need to print themIf it is necessary to make them on paper: No plastics will be used. Double-sided prints will be made. Recycled paper will be used. The printing of drafts will be avoided. A sustainable use of resources and the prevention of negative impacts on the natural environment must be made.
