General description	Practical subject focused on the o	development of	a process design	and optimization project	t. The student will learn more
	about process improvement and	viability analysi	s techniques while	acquiring practical exp	erience from a real case.

	041
0 1	Study programme competences
Code	Study programme competences
A9	EG1 - Knowledge and skills to organize and manage companies.
A10	EG2 - Knowledge and skills of strategy and planning applied to different organizational structures.
A12	EG4 - Knowledge of financial accounting and costs.
A13	EG5 - Knowledge of management information systems, industrial organization, production systems and logistics and quality management systems.
A14	EG6 - Capacities for work organization and human resources management. Knowledge on prevention of occupational risks.
B2	CB7 - That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments
	within broader (or multidisciplinary) contexts related to their area of ??study.
В3	CB8 - That students are able to integrate knowledge and face the complexity of making judgments based on information that, being
	incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and
	judgments.
B5	CB10 - That students have the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous
B6	G1 - Have adequate knowledge of the scientific and technological aspects in Industrial Engineering.
B7	G2 - Project, calculate and design products, processes, facilities and plants.
B13	G8 - Apply the knowledge acquired and solve problems in new or unfamiliar environments within broader and multidisciplinary contexts.
B14	G9 - Be able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited,
	includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments.
B16	G11 - Possess the learning skills that allow to continue studying in a self-directed or autonomous way.
C1	ABET (a) - An ability to apply knowledge of mathematics, science, and engineering.
C2	ABET (b) - An ability to design and conduct experiments, as well as to analyze and interpret data.
C3	ABET (c) - An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic,
	environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
C5	ABET (e) - An ability to identify, formulate, and solve engineering problems.
C6	ABET (f) - An understanding of professional and ethical responsibility.
C8	ABET (h) - The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and
	societal context.
C11	ABET (k) - An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Assessment comments	
---------------------	--

Assessment Criteria

Second Opportunity and Early Call

For

both first and second opportunity students, the evaluation will be conducted according to the relative weight indicated in the methodologies table, the same as for students in the early call.In order to pass the course, both in the first and second evaluation opportunities, as well as in the early call, it will be necessary to obtain a grade equal to or higher than 5 out of 10 in the supervised project.

No grade

Students who do not submit the supervised project within the given deadline, as indicated by the respective professor in each call, will be graded as "No Presentado" (Not Submitted). This criterion applies to both the first and second evaluation opportunities, as well as the early call.

Students with recognition of part-time dedication and academic exemption waiver Students

with recognition of part-time dedication and academic exemption from attendance will communicate their situation to the course instructors at the beginning of the semester, as established by the "Norma que regula el régimen de dedicación al estudio de los estudiantes de grado en la UDC" (Article 3.b and 4.5) and the "Normas de evaluación, revisión y reclamación de las calificaciones de los estudios de grado y máster universitario" (Article 3 and 8b).

For students who request

academic exemption, the evaluation will be the same as for the others since the supervised project will be completed outside of class hours.

Additional information

According to Article 11, section 4 b) of the "Reglamento disciplinar del estudiantado de la UDC", engaging in fraudulent behavior in any of the methodologies subject to assessment sections will result in a grade of "Fail (0)" for the final evaluation, both in the first and second opportunity, regardless of the opportunity in which the offense was committed.

## Other comments

A sustainable use of resources must be made to prevent the negative impact on the natural environment. For this reason, the delivery of the documentary works carried out in this subject: ? They will be requested in virtual format and / or computer support ? It will be done through Moodle, in digital format without needing to print them ? If it is necessary to make them on paper: a) plastics will not be used, b) double-sided impressions will be made, c) recycled paper will be used, d) the printing of drafts will be avoided.
