General description	<p>Sedentary leisure has become an important problem for childhood and adolescence. The educational system is expected to be able to promote active lifestyles. This means that teacher influence goes beyond the school and helps the students to be active during their free time, which requires some specific training in physical education for leisure.</p> <p>This subject deals with the didactic processing of leisure contents of physical education curricula. Furthermore, information about elementary students' free-time physical activity is given to help future teachers to design more accurate programs for their pupils. The organization of both complementary and after-school activities is also an important part in this course. There is growing social awareness of the need for teachers with specific skills in education and school-age groups to teach leisure activities. These skills are part of the primary school teacher training. Poorly trained teachers are no longer welcome in leisure educational settings, and families demand highly qualified professionals, who are able to organize leisure activities with educational purposes.</p> <p>The Physical Education branch in Primary Teacher Training contents most related to leisure are the following: leisure education in childhood and its relation with physical activity; lifetime physical and sports activities; physical activities in natural settings; and design and development of educational proposals.</p>				

Study programme competences / results

Code	Study programme competences / results
A57	Comprender os principios que contribúen á formación cultural, persoal e social desde a educación física.
A58	Coñecer o currículo escolar da educación física.
A59	Adquirir recursos para fomentar a participación ao longo da vida en actividades deportivas dentro e fóra da escola.
A60	Desenvolver e avaliar contidos do currículo mediante recursos didácticos apropiados e promover as competencias correspondentes nos estudantes.
B1	Aprender a aprender.
B2	Resolver problemas de forma efectiva.
B3	Aplicar un pensamento crítico, lóxico e creativo.
B4	Traballar de forma autónoma con iniciativa.
B5	Traballar de forma colaborativa.
B6	Comportarse con ética e responsabilidade social como cidadán e como profesional.
B9	Capacidade para expoñer as ideas elaboradas, de forma oral e na escrita.
B11	Capacidade de comprensión dos distintos códigos audiovisuais e multimedia e manexo das ferramentas informáticas.
B14	Capacidade para traballar en equipo de forma cooperativa, para organizar e planificar o traballo, tomando decisións e resolvendo problemas, tanto de forma conxunta como individual.
B15	Capacidade para utilizar diversas fontes de información, seleccionar, analizar, sintetizar e extraer ideas importantes e xestionar a información.
B16	Capacidade crítica e creativa na análise, planificación e realización de tarefas, como froito dun pensamento flexible e diverxente.

B21	CB1 - Que os estudantes demostrasen posuír e comprender coñecementos nunha área de estudo que parte da base da educación secundaria xeneral, e se adoita encontrar a un nivel que, se ben se apoia en libros de texto avanzados, inclúe tamén algúns aspectos que implican coñecementos procedentes da vangarda do seu campo de estudo
B22	CB2 - Que os estudantes saiban aplicar os seus coñecementos ao seu traballo ou vocación dunha forma profesional e posúan as competencias que adoitan demostrarse por medio da elaboración e defensa de argumentos e a resolución de problemas dentro da súa área de estudo
B23	CB3 - Que os estudantes teñan a capacidade de reunir e interpretar datos relevantes (normalmente dentro da súa área de estudo) para emitir xuízos que inclúan unha reflexión sobre temas relevantes de índole social, científica ou ética
B24	CB4 - Que os estudantes poidan transmitir información, ideas, problemas e solucións a un público tanto especializado como non especializado
B25	CB5 - Que os estudantes desenvolvesen aquelas habilidades de aprendizaxe necesarias para emprender estudos posteriores cun alto grao de autonomía
C3	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.
C7	Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.
C8	Valorar a importancia que ten a investigación, a innovación e o desenvolvemento tecnolóxico no avance socioeconómico e cultural da sociedade.

Learning outcomes			
Learning outcomes	Study programme competences / results		
Knowing the Leisure Pedagogy basics, as well as the Physical Education strategies for its development.	A59 A60	B1 B4 B5 B15 B21	C3
Analysing and assessing curricular contents related with leisure in Physical Education Curricula for Primary Education.	A58	B1 B5 B16 B23	C6
Designing, justifying, organizing and evaluating physical activity practices for Primary School students, with special focus on recreative recreational sport, physical activity in natural settings and interdisciplinary experiences.	A59 A60	B1 B2 B5 B6 B9 B11 B14 B15 B22 B24 B25	C3 C8
Identifying strategies and methodological resources to promote physical activity during leisure time.	A57 A59	B1 B2 B3 B14 B21	C3 C7
Understanding the importance of after-school activities as educational resources.	A57 A59	B3 B6

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Document analysis	Research skills development involving use of audiovisual and/or bibliographical documents (documentary or film extracts, news items, advertising images, photographs, articles, legal texts, etc.) relating to specific topic of study, with targeted analysis activities. Used as introduction to topic, as focus for case study, to explain abstract processes and present complex situations, or as strategy for synthesising content (theoretical and practical).
Collaborative learning	Guided teaching-learning procedures (overseen in person and/or using ICT methods) based on organisation of class into small groups in which students work together to solve tasks assigned by teacher, with aim of optimising their learning experience and that of other members of group.
Physical exercise	Sports-based learning method involving development of psychomotor and socio-motor skills through practical sports and/or physical activities (demonstrations, exercises, etc.).
Field trip	Activities associated with particular area of study which take place away from university or academic environment (businesses, institutions, organisations, historical sites, etc.), aimed at developing research capacities, including direct, systematic observation, information gathering and product development (project outline, plan, etc.).
Guest lecture / keynote speech	Oral presentation (using audiovisual material and student interaction) designed to transmit knowledge and encourage learning. Presentations of this type are variously referred to as 'expository method?', 'guest lectures?' or 'keynote speeches?'. (The term 'keynote?' refers only to a type of speech delivered on special occasions, for which the lecture sets the tone or establishes the underlying theme; it is characterised by its distinctive content, structure and purpose, and relies almost exclusively on the spoken word to communicate its ideas).

Oral presentation	Core component of teaching-learning process involving coordinated oral interaction between student and teacher, including proposition, explanation and dynamic exposition of facts, topics, tasks, ideas and principles.
Supervised projects	Supervised learning process aimed at helping students to work independently in a range of contexts (academic and professional). Focused primarily on learning ?how to do things? and on encouraging students to become responsible for their own learning.
Short answer questions	Objective test aimed at revising specific elements of course content. Exercise consists of supplying correct sentence, word, figure or symbol in response to specific question.

Personalized attention

Methodologies	Description
Supervised projects	<p>The supervised projects require personalised attention, so the tutorials and advisory sessions on the supervised project will be important references for realising the project. The teaching staff may make suggestions or request modifications to the tutored work that must be applied before its final delivery.</p> <p>In this subject, no academic dispensation of exemption from attendance is allowed except in the case of students with recognition of part-time dedication as established in the "REGULATION REGULATING THE REGIME OF DEDICATION TO STUDY OF UNDERGRADUATE STUDENTS IN THE UDC" - Approved by the Social Council of 04/05/2017-. For those activities that cannot be completed due to not attending the class, you must attend the reviews of the same with the teaching staff in order to be able to develop them.</p> <p>The personalized attention will be carried out by: face-to-face tutorials in the teacher's office, live tutorials through the UDC ?Teams? work area, via videoconference, audio connection or chat; through institutional email; through the chats and forums available in Teams and Moodle.</p>

Assessment

Methodologies	Competencies / Results	Description	Qualification
Supervised projects	A57 A58 A59 A60 B1 B5 B6 B9 B14 B16 B21 B22 B23 B24 C3 C8	Supervised learning process aimed at helping students to work independently in a range of contexts (academic and professional). Focused primarily on learning ?how to do things? and on encouraging students to become responsible for their own learning.	50
Short answer questions	A57 A58 B2 B3 B5 B14	Objective test aimed at revising specific elements of course content. Exercise consists of supplying correct sentence, word, figure or symbol in response to specific question.	50

Assessment comments

First chance: to access to the evaluation

described above, students have to attend 80% of the classes. A minimum score in the different sections of the evaluation is necessary to calculate the mean between them. If one of the sections is not passed, the subject cannot be passed. Second chance: for students who have participated in more than 80% of the sessions on the first opportunity, the sections they have passed previously will be kept. You will have to repeat only the parts of the assessment that you have not passed. You may be asked to do the task individually on this occasion. Students who do not participate in 80% of the sessions of the subject can access to an alternative evaluation model, which will be the same for both opportunities. An exam (100%) will be carried out on the official appointed date by the University of A Coruña in which mastery of the theoretical-practical contents of the subject must be demonstrated. The fraudulent performance of the evaluation tests or activities, once verified, will directly imply the qualification of failure in the call in which it is committed: the student will be graded with "fail" (numerical grade 0) in the corresponding call of the academic year, whether the commission of the fault occurs in the first opportunity or in the second. If necessary, the student's grade will be modified in the first opportunity report. The methodologies "Physical exercise" and "Field trip" are subject to the possibility of guaranteeing the security of the participants. When the appropriate security conditions are not met, these methodologies may be replaced by classroom or even virtual sessions. The development of the skills linked to these methodologies would be incorporated into the following ones: ?Collaborative learning?, ?Guest lecture/keynote speech?, ?Oral presentation?, ?Supervised projects?, ?Short answer questions?. Work in this subject is preferably submitted electronically, seeking the sustainable use of resources and the prevention of negative impacts on the natural environment. The excursions will also pursue the same objective, always trying to be environmentally responsible. The subject will facilitate the full integration of students who, for physical, sensory, mental or socio-cultural reasons, experience difficulties in gaining adequate, equal and useful access to university life. In addition, the gender perspective must be incorporated into the work and presentations on this subject. Spelling (spelling, accentuation and punctuation) and grammatical and lexical correctness are essential for getting good marks on the supervised project.

Other comments

In this subject, the gender perspective is incorporated (for example, non-sexist language is employed, a bibliography of authors of both sexes is used, and the intervention of male and female students in class is encouraged). Work will be done to identify and modify sexist prejudices and attitudes and influence the environment to modify them and promote values of respect and equality. If any situation of gender discrimination is detected, actions and measures will be proposed to correct them. If any printed essay is requested, the following indications will be followed: do not use plastics, choose double-sided printing and use recycled paper. Students will avoid printing drafts as far as possible. The methodologies "Physical exercise" and "Field trip" are subject to the possibility of guaranteeing the security of the participants. When the appropriate security conditions are not met, these methodologies may be replaced by classroom or even virtual sessions. The development of the skills linked to these methodologies would be incorporated into the following ones: ?Collaborative learning?, ?Guest lecture/keynote speech?, ?Oral presentation?, ?Supervised projects ?, ? Short answer questions?.

(*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
