

Teaching Guide

Identifying Data					2024/25
Subject (*)	Biomedical Image Analysis		Code	614535013	
Study programme	Máster Universitario en Visión por Computador				
Descriptors					
Cycle	Period	Year	Type	Credits	
Official Master's Degree	2nd four-month period	First	Optional	6	
Language	English				
Teaching method	Face-to-face				
Prerequisites					
Department	Ciencias da Computación e Tecnoloxías da Información				
Coordinador	Novo Bujan, Jorge		E-mail	j.novo@udc.es	
Lecturers	De Moura Ramos, Jose Joaquim Novo Bujan, Jorge		E-mail	joaquim.demoura@udc.es j.novo@udc.es	
Web	https://www.imcv.eu/guide/2024-2025/bmia/				
General description					

Study programme competences / results

Code	Study programme competences / results
A1	CE1 - To know and apply the concepts, methodologies and technologies of image processing
A2	CE2 - To know and apply machine learning and pattern recognition techniques applied to computer vision
A5	CE5 - To analyze and apply methods of the state of the art in computer vision
A7	CE7 - To understand and apply the fundamentals of medical image acquisition, processing and analysis
A8	CE8 - To communicate and disseminate the results and conclusions of research in the field of computer vision
B1	CB6 - To possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
B3	CB8 - That students are able to integrate knowledge and deal with the complexity of making judgements based on information that is incomplete or limited, including reflections on social and ethical responsibilities linked to the application of their knowledge and judgements
B7	CG2 - Ability to analyze a company's needs in the field of computer vision and determine the best technological solution for it
B10	CG5 - Ability to identify unsolved problems and provide innovative solutions
B11	CG6 - Ability to identify theoretical results or new technologies with innovative potential and convert them into products and services useful to society
C3	CT3 - Development of the innovative and entrepreneurial spirit

Learning outcomes

Learning outcomes	Study programme competences / results		
Knowledge of specific advanced techniques for biomedical image processing and analysis.	AC1 AC2 AC5 AC7 AC8	BC1 BC3 BC7 BC10 BC11	CC3
Analysis of current biomedical imaging applications, and ability to evaluate existing solutions, as well as the development of new specific solutions	AC1 AC2 AC5 AC7 AC8	BC1 BC3 BC7 BC10 BC11	CC3

Evaluation of the adequacy of applied methodologies in a multidisciplinary context for biomedical environments.	AC1 AC2 AC5 AC7 AC8	BC1 BC3 BC7 BC10 BC11	CC3
Ability to write documentation and reports on scientific and technical results.	AC1 AC2 AC5 AC7 AC8	BC1 BC3 BC7 BC10 BC11	CC3

Contents	
Topic	Sub-topic
Advanced biomedical image processing and analysis techniques	
Advanced segmentation techniques in biomedical imaging	
Pattern recognition in biomedical imaging	
Advanced brain imaging techniques	
Advanced biomedical image analysis applications	

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Laboratory practice	A5 A8 B3 B10	15	51.84	66.84
Guest lecture / keynote speech	A1 A2 A7 B1 B7 B11 C3	14	21.6	35.6
Supervised projects	A5 A8 B3 B10	10	34.56	44.56
Personalized attention		3	0	3

(*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Laboratory practice	Practice in computer classrooms, learning based on the resolution of practical cases, combining work and autonomous learning with group work for cooperative learning
Guest lecture / keynote speech	Participatory Master Lessons
Supervised projects	Presentations of project-oriented works

Personalized attention	
Methodologies	Description
Laboratory practice Supervised projects	Attention to the challenges that the students are exposed to both in the practices and in the works exhibited.

Assessment			
Methodologies	Competencies / Results	Description	Qualification
Laboratory practice	A5 A8 B3 B10	Development practices of applied cases	50
Supervised projects	A5 A8 B3 B10	Practical projects related to the subject	30
Guest lecture / keynote speech	A1 A2 A7 B1 B7 B11 C3	Demonstration of application of knowledge taught in class	20

Assessment comments

For the second part, specifically: Practical projects related to the subject (mandatory presence >75% of classes).

All components may be subjected to oral exam / discussion (e.g. Top 5% grade decision).

For the second part: Minimal grade is 7/20 (35%) per component. All components together must grade 9,5/20 (47,5%) for pass.

Sources of information

Basic	Handbook of Biomedical Image Analysis (Editors: Wilson, David, Laxminarayan, Swamy). 2005Aly A. Farag, Biomedical Image Analysis, Statistical and Variational Methods. 2014Artigos en conferencias e revistas da área (ISBI, MICCAI, T-MI, IEEE Transactions on Biomedical Engineering, etc.) p { margin-bottom: 0.25cm; direction: ltr; line-height: 115%; text-align: left; orphans: 2; widows: 2; background: transparent }
Complementary	

Recommendations

Subjects that it is recommended to have taken before

Fundamentals of Machine Learning for Computer Vision /614535007

Instrumentation and Processing for Machine Vision/614535009

Fundamentals of Image Processing and Analysis /614535001

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Other comments

- As reflected in the various regulations applicable to university teaching, the gender perspective should be incorporated into this subject (non-sexist language will be used, bibliography from authors of both sexes will be used, the intervention of male and female students in class will be encouraged...).- Work will be done to identify and modify sexist prejudices and attitudes, and we will influence the environment to change them and promote values of respect and equality.- Situations of discrimination on the grounds of gender should be detected and actions and measures should be proposed to correct them.
