| General description | The main objective of the Master's Thesis is the analysis, design, implementation and validation of a project, carried out individually, related to Computer Vision. It can be developed in a company or entity with proven experience in $\mathrm{R}+\mathrm{D}+\mathrm{i}$ projects, being supervised by a professional in the field. The project must approach innovation components that go beyond the mere development of an application, service or standard line of business. The MT must promote the contribution of added value by the student in innovative projects, and its direct relationship with the labor market or with some aspect of cutting-edge research. |  |  |  |  |

| Study programme competences / results |  |
| :---: | :--- |
| Code | Study programme competences / results |
| A4 | CE4 - To conceive, develop and evaluate complex computer vision systems |
| A8 | CE8 - To communicate and disseminate the results and conclusions of research in the field of computer vision |
| B4 | CB9 - That students are able to communicate their findings -and the ultimate knowledge and reasons behind them- to specialist and <br> non-specialist audiences in a clear and unambiguous manner |
| B7 | CG2 - Ability to analyze a company's needs in the field of computer vision and determine the best technological solution for it |
| B8 | CG3 - Ability to develop computer vision systems depending on existing needs and apply the most appropriate technological tools |
| B9 | CG4 - Ability to critically analyze and rigorously evaluate technologies and methodology |
| B10 | CG5 - Ability to identify unsolved problems and provide innovative solutions |
| B11 | CG6 - Ability to identify theoretical results or new technologies with innovative potential and convert them into products and services useful <br> to society |
| C1 | CT1 - Practice the profession with a clear awareness of its human, economic, legal and ethical dimensions and with a clear commitment to <br> quality and continuous improvement |
| C2 | CT2 - Ability to work as a team, organize and plan |
| C3 | CT3 - Development of the innovative and entrepreneurial spirit |

| Oral presentation | The Master's Thesis will be presented and defended before an evaluation committee established by the Academic <br> Commission for each call. |
| Supervised projects | The student must do an original and individual work of analysis, design, implementation and evaluation, with innovative <br> components, on a topic related to computer vision. The work developed will be governed by the objectives established in a <br> preliminary project approved by the Master's Academic Commission, and by the personalized attention provided by the tutors <br> in charge of the direction. Finally, the student must describe the work carried out in a report, following the established format, <br> which will be presented for evaluation by the evaluation committee. |

| Personalized attention |  |
| :--- | :--- |
| Methodologies | Description |
| Supervised projects <br> Oral presentation | During the development of the work, the student will receive personalized attention from the tutor(s). Personalized attention is <br> essential to define, guide, supervise and delimit the work, as well as to prepare the oral presentation and evaluation. |
