| **General description** | Provide theoretical knowledge that allows an in-depth study of linguistic models, such as language models and models of distributional semantics.<br><br>Link language modeling and model types to different tasks within the area of language technologies and natural language processing.<br><br>Evaluate different aspects of language models.<br><br>Provide practical knowledge to train language models and use them in different natural language processing tasks. |
|---|---|

| Study programme competences / results | |
|---|---|
| **Code** | **Study programme competences / results** |
| A2 | CE01 - Understanding and command of techniques for lexical, syntactic and semantic processing of text in natural language |
| A3 | CE02 - Understanding and command of fundamentals and techniques for processing linked documents, both structured and unstructured, and of the representation of their contents |
| A4 | CE03 - Understanding and knowledge of the techniques for knowledge representation and processing for ontologies, graphs and RDF, together with their associated tools |
| B1 | CG01 - Maintaining and extending theoretical foundations to allow the introduction and exploitation of new and advanced technologies in the field of AI |
| B3 | CG03 - Searching and selecting that useful information required to solve complex problems, with a confident handling of bibliographical sources in the field |
| B4 | CG04 - Suitably elaborating written essays or motivated arguments, including some point of originality, writing plans, work projects, scientific papers and formulating reasonable hypotheses in the field |
| B6 | CB01 - Acquiring and understanding knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, frequently in a research context |
| B7 | CB02 - The students will be able to apply the acquired knowledge and to use their capacity of solving problems in new or poorly explored environments inside wider (or multidisciplinary) contexts related to their field of study |
| B10 | CB05 - The students will acquire learning abilities to allow them to continue studying in way that will mostly be self-directed or autonomous |
| C2 | CT02 - Command in understanding and expression, both in oral and written forms, of a foreign language |
| C3 | CT03 - Use of the basic tools of Information and Communications Technology (ICT) required for the student's professional practice and learning along her life |
| C7 | CT07 - Developing the ability to work in interdisciplinary or cross-disciplinary teams to provide proposal that contribute to a sustainable environmental, economic, political and social development |
| C8 | CT08 - Appreciating the importance of research, innovation and technological development in the socioeconomic and cultural progress of society |

| Learning outcomes | | | |
|---|---|---|---|
| **Learning outcomes** | **Study programme competences / results** | | |
| To know how to use the techniques and methods of natural language processing to solve real problems of analysis of texts in natural language. | AC1 AC3 | BC1 BC3 BC4 BC7 BC10 | CC2 CC3 CC7 |
| To know, understand and analyze deep learning techniques applied to natural language processing. | AC1 AC2 | BC1 BC3 BC6 BC7 BC10 | CC2 CC3 CC7 CC8 |
| To know how to use deep learning techniques and methods to solve practical problems in natural language processing. | AC1 AC2 | BC1 BC3 BC4 BC6 BC7 BC10 | CC2 CC3 CC7 CC8 |
| To know and understand the environmental problems posed by the computational cost of deep learning techniques when applied to text analysis | AC1 AC2 | BC1 BC6 | CC2 CC8 |

| Contents | |
|---|---|
| **Topic** | **Sub-topic** |
| Language models | N-gram based language models |
| | Neural based language models |
| Distributional semantics models | Linguistic hypothesis about distributional meaning |
| | Classic models of distributional semantics |
| | Neural models representing static meaning (word embeddings) |
| | Neural models representing dynamic-contextual meaning |
| | Compositional models |
| Sequence labeling | Use and fine-tuning of models for sequence labeling |
| Text-To-Text models | Uso e adaptación de modelos para o etiquetado secuencial |

| Planning | | | | |
|---|---|---|---|---|
| **Methodologies / tests** | **Competencies / Results** | **Teaching hours (in-person & virtual)** | **Student?s personal work hours** | **Total hours** |
| Guest lecture / keynote speech | A2 A3 A4 B1 B3 B6 B7 B10 C2 C8 | 10 | 10 | 20 |
| Laboratory practice | A2 A3 B3 B4 B6 B7 B10 C2 C3 C7 C8 | 5 | 17 | 22 |
| Problem solving | A2 A3 B3 B4 B6 B7 B10 C2 C8 | 6 | 15 | 21 |
| Multiple-choice questions | A2 A3 B1 B6 B7 B10 C2 | 0 | 1 | 1 |
| Objective test | A2 A3 B1 B6 B7 B10 C2 C3 | 2 | 8 | 10 |
| Personalized attention | | 1 | 0 | 1 |

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

| Methodologies | |
|---|---|
| **Methodologies** | **Description** |
| Guest lecture / keynote speech | Theoretical classes, in which the content of each topic is exposed. The student will have copies of the slides in advance and the teacher will promote an active attitude, asking questions that allow clarifying specific aspects and leaving questions open for the student's reflection. |
| Laboratory practice | Practical classes with the use of a computer, which allow the student to familiarize himself/herself from a practical point of view with the issues exposed in the theoretical classes. |
| Problem solving | Problem-based learning, seminars, case studies and projects. |
| Multiple-choice questions | Brief questionnaires to be filled after some theoretical sessions to help assimilate the content of the lecture. |
| Objective test | The mastery of the theoretical and operating knowledge of the subject will be evaluated. |

| Personalized attention | |
|---|---|
| **Methodologies** | **Description** |
| Laboratory practice Problem solving Objective test Guest lecture / keynote speech | The development of the master classes, as well as of the problem solving classes and the practical laboratories, will be carried out according to the progress of the students in the comprehension and assimilation of the contents taught. The general progress of the class will be combined with a specific attention to those students who present greater difficulties in the task of learning and with an additional support to those who present greater fluency and wish to broaden their knowledge. With regard to individual tutorials, given their personalized nature, they should not be devoted to extend the contents with new concepts, but to clarify the concepts already exposed. The teacher will use them as an interaction that will allow them to draw conclusions regarding the degree of assimilation of the subject by the students. |

| Assessment | | | |
|---|---|---|---|
| **Methodologies** | **Competencies / Results** | **Description** | **Qualification** |
| Laboratory practice | A2 A3 B3 B4 B6 B7 B10 C2 C3 C7 C8 | The deliveries of the practices must be made within the period established in the virtual campus and must follow the specifications indicated in the assigment both for their presentation and their defense. | 50 |
| Objective test | A2 A3 B1 B6 B7 B10 C2 C3 | Compulsory. Mastery of theoretical and operational knowledge of the subject will be assessed. | 45 |
| Multiple-choice questions | A2 A3 B1 B6 B7 B10 C2 | Small continuous assessment questionnaires that will be proposed at the end of some theoretical sessions and where you will be asked in a simple way about some of the concepts explained in that session. It will be notified in advance. | 5 |

| Assessment comments |
|---|

Students must achieve a minimum of 40% of the maximum mark of the "Laboratory Practices" and "Objective Test" parts, and in any case the sum of the three parts must be greater than 5 to pass the subject. If any of the above requirements is not met, the grade for the course will be established according to the lowest grade obtained.

In case of not reaching the minimum score in the "Laboratory Practices" or "Objective Test" parts, the student will have a second opportunity in which only the delivery of the failed part will be required.

Grades will not be saved between academic years.

The delivery of the practicals must be done within the deadline established in the virtual campus and must follow the specifications indicated in the statement for both its presentation and defense.

The student who submits all the compulsory practicals or attends the objective test in the official evaluation period will be considered "Presented".

All aspects related to academic exemption, study dedication, permanence, and academic fraud will be governed in accordance with the current academic regulations of the University.

| Other comments |
|---|
| As stated in the different university teaching regulations, this subject incorporates the gender perspective. Student participation in class will be encouraged, and work will be done to identify and modify prejudices and sexist attitudes and influence the environment to modify them and promote values ??of respect and equality. Situations of discrimination based on gender must be detected and actions and measures to correct them will be proposed. |
