

## Teaching Guide

Identifying Data					2024/25
<b>Subject (*)</b>	Advanced Parallel Programming		<b>Code</b>	614973107	
<b>Study programme</b>	Mestrado Universitario en Computación de Altas Prestacións / High Performance Computing (Mod. Virtual)				
Descriptors					
<b>Cycle</b>	<b>Period</b>	<b>Year</b>	<b>Type</b>	<b>Credits</b>	
Official Master's Degree	2nd four-month period	First	Optional	6	
<b>Language</b>	SpanishGalicianEnglish				
<b>Teaching method</b>	Non-attendance				
<b>Prerequisites</b>					
<b>Department</b>	Departamento profesorado másterEnxeñaría de Computadores				
<b>Coordinador</b>	Fraguela Rodriguez, Basilio Bernardo	<b>E-mail</b>	basilio.fraguela@udc.es		
<b>Lecturers</b>	Darriba López, Diego	<b>E-mail</b>	diego.darriba@udc.es		
	Fraguela Rodriguez, Basilio Bernardo		basilio.fraguela@udc.es		
<b>Web</b>	aula.cesga.es				
<b>General description</b>	<p>This subject will increase the knowledge on parallel programming acquired by the students in the previous quarter in subjects such as "Parallel Programming" and "Programming of heterogeneous architectures". The aim will be that the students learn to optimize parallel codes for big parallel architectures or current supercomputers, using for their tests the resources provided by the Centro de Supercomputación de Galicia (CESGA) and the Group of Architecture of Computers (GAC) of the Universidade da Coruña (UDC).</p> <p>We will focus on those aspects of the parallel applications that usually penalize performance, such as the communications, load unbalance, memory access patterns or the management of I/O. We will also tackle multiplatform computing, which allows to take advantage of the task level parallelism by using several hardware accelerators, as well as hybrid computing, where the same application uses several parallel programming paradigms in order to obtain good performance in clusters with multi-core computers and/or hardware accelerators.</p>				

## Study programme competences / results

Code	Study programme competences / results
A1	CE1 - Define, evaluate and select the most appropriate architecture and software to solve a problem
A2	CE2 - Analyze and improve the performance of a given architecture or software
A4	CE4 - Deepen in the knowledge of different programming tools and programming languages in the field of the high performance computing
A5	CE5 - Analyze, design and implement efficient parallel algorithms and applications
A7	CE7 - Know the emerging technologies in the supercomputing field
B1	CB6 - Possess and understand the knowledge that give a baseline or opportunity to be original in the development and/or application of ideas, often in a research environment
B2	CB7 - The students have to know how to apply the acquired knowledge and their capacity to solve problems in new or hardly explored environment inside wider contexts (or multidisciplinary) related to its area of development
B5	CB10 - The students have to possess learning skills that allows them to continue to study in a mainly self-driven or autonomous manner
B6	CG1 - Be able to search and select useful information to solve complex problems, using the bibliographic sources of the field
B9	CG4 - Be able to plan and do research, development and innovation tasks in high performance computing related environments
C1	CT1 - Use the basic technologies of the information and computing technology field required for the professional development and the long-life learning

## Learning outcomes

Learning outcomes	Study programme competences / results

Know advanced techniques for the optimization of parallel codes	AJ1 AJ2 AJ5	BJ1 BJ2 BJ5 BJ6 BJ9	
Control the affinity and load balance of tasks	AJ5	BJ1 BJ2 BJ5 BJ6 BJ9	CJ1
Optimize communications in distributed memory systems	AJ2 AJ4 AJ5	BJ1 BJ2 BJ5 BJ6 BJ9	CJ1
Perform parallel input/output operations	AJ4 AJ5	BJ1 BJ2 BJ5 BJ6 BJ9	CJ1
Program systems with several hardware accelerators	AJ4 AJ5 AJ7	BJ1 BJ2 BJ5 BJ6 BJ9	CJ1
Program systems with shared/distributed memory	AJ4 AJ5 AJ7	BJ1 BJ2 BJ5 BJ6 BJ9	CJ1

Contents	
Topic	Sub-topic
1- Advanced techniques for the optimization of parallel codes	-
2- Affinity control and load balance	-
3- Optimization of communications in distributed memory systems	-
4- Parallel input/output	-
5- Hybrid programming for systems with several hardware accelerators	-
6- Hybrid programming for systems with shared/distributed memory	-

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student?s personal work hours	Total hours
Laboratory practice	A2 A5 C1	4	80	84
Supervised projects	A1 A2 A4 A5 A7 B1 B2 B5 B6 B9 C1	0	45	45

Workbook	A1 A4 A7 B1	0	20	20
Personalized attention		1	0	1

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Laboratory practice	In this activity autonomous tasks guided by instructions from the teacher are carried out which allow the student to become familiar from a practical point of view with the contents exposed in the reading materials on the contents of the subject.
Supervised projects	They consist in the development of projects in which the student has to use the acquired knowledge to solve different problems in an autonomous way.
Workbook	Reading and viewing material related to the content of each topic. The student will have all the necessary material according to the calendar of the subject. The teacher will promote an active attitude, encouraging the student to ask questions that clarify specific aspects. The material will leave open questions for the reflection of the student.

Personalized attention	
Methodologies	Description
Supervised projects Laboratory practice	Both in the practices carried out autonomously as well as during the development of the supervised projects, the students will be able to present questions, doubts, etc. The teacher, in response to these requests, will review concepts, solve new problems or use any activity that considers appropriate to resolve the issues raised.

Assessment			
Methodologies	Competencies / Results	Description	Qualification
Supervised projects	A1 A2 A4 A5 A7 B1 B2 B5 B6 B9 C1	Quality of the work developed and progress of the student during its completion	100

Assessment comments
<p>In the activities of distance evaluation students may be required to apply mechanisms that guarantee their identity as well as the authorship of the evaluable elements presented.</p> <p>All the evaluation activities included in this guide conform the process of continuous evaluation of the subject. Neither the classes nor the evaluation activities require the student's presence. This, together with the fact that all the materials of the subject are available in the education web platform of the degree, favors the work and the evaluation of the students enrolled part-time and with academic allowance of teaching exemption.</p>

## Recommendations

### Subjects that it is recommended to have taken before

Parallel Programming/614473102

Heterogeneous Programming/614473103

### Subjects that are recommended to be taken simultaneously

### Subjects that continue the syllabus

Master's Thesis/614473111

### Other comments

Due to the strong interrelation between the theoretical part and the practical part, and the progressiveness in the presentation of concepts closely related to each other in the theoretical part, it is advisable to dedicate a time of study or daily review. In this subject, intensive use of online communication tools will be made: videoconference, email, chat, etc.
