General description	This course is devoted to the study of the basic results and applications of classical subjects in mathematics: Linear				
	Algebra, Euclidean Geometry, Functional Analysis and Complex Variable. The studenst will learn to use these specific				
	mathematical tools, but also they will improve their skills in developing new methods and adquiring new technlolgies, to				
	consult bibliographic references and online resources, to elaborate a memory in a rigourous and sistematic manner, to give				
	lectures to others and collaborate with other colleagues, etc. In general they will develop a sense of scientific and rational				
	thinking, capable to adapt to unexpected situations which may arise in their future practice as an engineer.				

	Study programme competences / results
Code	Study programme competences / results
A54	RA1C-Write, explain and transmit the theoretical knowledge acquired both orally and in writing using scientific-technical language.
A55	RA2C-Identify and relate acquired knowledge to other disciplines
A57	RA4C-Collecting and interpreting relevant data
B30	RA7H-Applying critical, logical and creative thinking
B31	RA9H-Effectively solve practical problems associated with the subject by applying the knowledge acquired.
B32	RA10H-Know, analyse, synthesise and apply the contents, fundamental concepts and applications of the subject.
B33	RA11H-Develop both individual and group work
B34	RA12H-Handle bibliographic material and computer resources.
B35	RA13H-Handle with ease the tools, techniques, equipment and/or material/instrumental of each subject.
B36	RA14H-Use information and communication technology (ICT) tools necessary for the exercise of their profession and for lifelong learning.
C14	RA16X-Produce a report in a rigorous and systematic way.

	Contents
Торіс	Sub-topic
Lesson 1 Matrices and Determinants.	1.1 Matrices. Operations with matrices.
	1.2 Determinants.
Lesson 2 Vector spaces.	2.1 Introduction.
	2.2 Definition, examples and properties.
	2.3 Linear subspace.
	2.4 Linear dependence and linear independence.
	2.5 Generator systems.
	2.6 Bases. Dimension.
	2.7 Equations of a linear subspace.
	2.8 Range of a system of vectors.
Lesson 3 Linear Mappings	3.1 Introduction.
	3.2 Linear mappings.
	3.3 Matrix associated to a linear mapping.
	3.4 Change of basis matrix.
Lesson 4 Systems of Linear Equations.	4.1 Introduction.
	4.2 Definition, examples.
	4.3 Existence and uniqueness of solution. Rouche-Frobenius theorem.
	4.4 Cramer's rule.
	4.5 Gauss and Gauss-Jordan method.
Lesson 5 Matrix Diagonalization.	5.1 Eigenvectors and Eigenvalues. Properties.
	5.2 Characteristic polynomial. Properties.
	5.3 Diagonalizable Matrices. Diagonalization.
	5.4 Diagonalization Of Symmetric Matrices.
Lesson 6 Affine Space E3. Problems of Incidence and	6.1 Affine Space Associated to a Vector Space. System of Reference. Coordinates.
Parallelism.	6.2 Equations of Straight Lines.
	6.3 Relative positions of Straight Lines.
	6.4 Equations of a Plane.
	6.5 Relative positions of Planes. Bundles of Planes.
	6.6 Relative positions of Straight Lines and Planes.
Lasson 7. Euclidean Visitar Spasse, Sepler product Visitar	7.1. Seeler product
Product Mixed Product	7.1 Stalal product
	7.2 Determination of a Scalar Floudet. Gram Matrix.
	7.5. Euclidean Vector Space. Deminion.
	7.5. Angle of two Vectors. Orthogonality
	7.6. Orthonormal Basis, Expression of the Scalar Product in an Orthonormal Basis
	7.7. Euclidean Space E3
	7.8 - Orientation in E3
	7.9 - Vector product in R3. Properties Analytical expression
	7.0. Mixed product in the analytical expression.
	וווענוףופומוטוו. אומועונים בארבסטטוו. שפטוופוונים ווופוףופומוטוו.

Lesson 8 Metric Problems in Euclidean Spaces.	8.1 Normal equation of a Plane.
	8.2 Angles between Linear Manifolds in R3: Angle of Two Planes, Angle of Two
	Straight Lines, Angle of Straight Line and Plane.
	8.3 Distance between Linear Manifolds in R3: Distance of a Point to a Plane,
	Distance of a Point to a Straight Line. Distance between two Planes, Distance
	between Straight Line and Plane. Distance between two Straight Lines. Common
	Perpendicular to two Straight Lines.
	8.4 Cylindrical coordinates and Spherical coordinates in R3.
Lesson 9Real valued functions of a Real Variable.	9.1 Basic definitions.
Continuity.	9.2 Functional limits.
	9.3 Continuity. Types of Discontinuity.
	9.4 Properties and Theorems on Continuous Functions.
Lesson 10 Differentiability and Applications of the	10.1 Derivative and Differential of a Function in a Point. Geometrical meaning.
Derivatives.	10.2 Properties and Calculation of Derivatives.
	10.3 Derivative function. Successive derivatives.
	10.4 Applications of the Derivatives to the Local Study of a Function: Growth and
	Decreasing. Maxima and Minima. Concavity and Convexity. Inflection points.
	10.5 Theorems of Rolle and Mean Value Theorem.
	10.6 Rules of L´Hôpital
Lesson 11 Theorem of Taylor and Applications. Plot of a real	11.1 Expression of a Polynomial by means of his Derivatives in a Point.
function.	11.2 Polynomial and Theorem of Taylor. Formulae of Taylor and Mac Laurin.
	11.3 Expression of Lagrange for the Residual. Bounds for the residual.
	11.4 Applications to the Local Study of a Function: Monotonicity. Extremal values.
	Concavity and Convexity. Inflection points. Plot of a real function.
Lesson 12 Indefinite integration of Functions of a Real	12.1 General definitions. Table of Primitives.
Variable	12.2 Immediate integration
	12.3 Integration by Parts
	12.4 Integration of Rational Functions
	12.5 Integration by Replacement or Change of Variable
Lesson 13 Definite Integration. Applications.	13.1 General definitions
	13.2 Properties
	13.3 Mean Value Theorem. Barrow's Rule.
	13.4 Evaluation of Definite Integrals.
	13.5 Improper Integral.
	13.6 Applications of the Definite Integral
Lesson 14 Complex Numbers	14.1 General definitions
	14.2 Fundamental operations
	14.3 Powers and Roots
	14.4 Exponential form of a Complex
	14.5 Logarithms And Complex Powers.

The development and overcoming of these contents, together with those corresponding to other subjects that include the acquisition of specific competencies of the degree, guarantees the knowledge, comprehension and sufficiency of the competencies contained in Table AII / 2, of the STCW Convention, related to the level of management of chief mates of the Merchant Navy, on ships without gross tonnage limitation and Master up to a maximum of 500 GT.

Table A-II / 2 of the STCW Convention.

acquisition of specific competencies of the degree, guarantees Mandatory minimum requirements for certification of masters and chief mates on chief the knowledge, comprehension and sufficiency of the on ships of 500 gross tonnage or more.

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies	
Methodologies	Description	
Guest lecture /	Exposition in the classroom of the fundamental concepts.	
keynote speech		
Problem solving	In each topic, exercises will be proposed to solve.	
Supervised projects	Proposed individual and group projects.	
Seminar	Individual and / or very small group tutorships.	
Document analysis	Select books and web pages to use	
Introductory activities	Introdución á materia	
Objective test	Knowledge assessment.	

	Personalized attention
Methodologies	Description
Problem solving	The students are encouraged to attend in small groups or individually to the professors' office, or by TEAMS, to solve
Supervised projects	questions that may arise, thus obtaining a more specific guidance, acoording to their specific difficulties.
	Meetings with students will preferably be held online (MS Teams).

Assessment

Methodologies	Competencies /	Description	Qualification
	Results		
Problem solving	A54 B30 B31 B32	Solve problems.	15

## Assessment comments

The students participating in the EHEA should take a minimum of 75% of the continuous assessment (c.a.) tests done in the classroom. These c.a. test might be posed either on keynote lectures or problem solving sessions, and they represent the 40% of the final score. The other 60% of the score will be obtained from the partial tests that will take place throughout the term.

The students who have followed the continuous assessment but have not reached the 50% of the score through the partial tests will have a chance to reach it through a final test. This final test will include all topics of the term (the partial tests do not exclude topics)

The students who decide to not take part in the EHEA will be evaluated with an objective test that includes an individual test of assimilation of practical-theoretical knowledge and problem solving.

All aspects related to "academic exemption", "dedication to study", "permanence" and "academic fraud" will be governed in accordance with the current academic regulations of the UDC. In any case, students with an academic dispensation are asked to indicate this to the teaching staff at the beginning of the semester.

Other comments
It is highly recommended to attend the introductory course that is held the first week of the first semester.
