

Teaching Guide						
Identifying Data				2024/25		
Subject (*)	Agricultural and Industrial Uses of Water		Code	632549020		
Study programme	Máster Universitario en Xestión Sostible da Auga					
Descriptors						
Cycle	Period	Year	Type	Credits		
Official Master's Degree	2nd four-month period	First	Optional	3		
Language	Spanish					
Teaching method	Face-to-face					
Prerequisites						
Department	Enxeñaría Civil					
Coordinador	Vázquez González, Ana María	E-mail	ana.maría.vazquez@udc.es			
Lecturers	Pena Mosquera, Luis Vázquez González, Ana María	E-mail	luis.pena@udc.es ana.maría.vazquez@udc.es			
Web						
General description						

Study programme competences / results	
Code	Study programme competences / results
A1	CON1 Describe the principles, concepts, and dimensions that encompass integrated water resources management and its role as a key tool for achieving water security and advancing the associated Sustainable Development Goals (SDGs). Identify problems related to water development, use, and access. Identify and compare water legislation at the European, national, regional, and local levels, as well as interpret conceptual frameworks on sustainable development and their application to the water sector, with a specific focus on the SDGs. Provide tools to explain the economics of water. Enumerate aspects of public taxation that may be relevant in water management.
A2	CON2 Identify the different urban systems directly or indirectly linked to water. Outline their interrelationships and apply an ecosystemic and interdisciplinary approach. Recognize the various water supply sources, the implications of their use, and their impact on natural degradation, as well as their possibilities for recycling and reuse. Identify and explain the key aspects of integrating the circular economy into the urban water system. Explain the typical tools used for conceptualizing water-related urban systems. Review current trends in nature-based solutions for managing urban stormwater. Interpret the territory to advocate for more centralized or decentralized approaches to urban water management in areas with dispersed population and economic activities.
A3	CON3 Explain the foundations of chemistry, biology, and morphology of continental aquatic ecosystems. Provide the common methodology of the EU for assessing the status of water bodies and its adaptation to different territorial contexts. Identify models for assessing pressures and impacts on water bodies, understanding their opportunities and limitations. Suggest solutions for the maintenance and improvement of the status of water bodies across their different quality elements. Identify bioindicators.
A4	CON4 Enumerate the water treatment systems, both for supplying populations or industries, and for the purification and subsequent return to natural environments and reuse of regenerated water. Identify and describe the emerging challenges in water treatment.
A5	CON5 Describe the fundamentals of water resources assessment and the main tools for hydrological planning, based on the Water Framework Directive, legislation, and global frameworks for water resource allocation, including the environmental component. Demonstrate that ecosystem services linked to water have high added value and that nature-based solutions enable a sustainable approach to water resource management.
B1	HAB1 Use and compare water legislation and conceptual frameworks related to sustainable development. Operate with tools that allow estimating economic variables (macro and micro) related to water, and employ the tools to apply appropriate taxation and cost policies to water
B3	HAB3 Select and operate innovative treatment systems adapted to different realities, geographical environments, and quality requirements, including emerging challenges and applications.

B4	HAB4 Analyze the European Union's Water Framework Directive and Floods Directive, their technical implications, and their implementation through hydrological planning. Utilize computer tools for problem-solving related to water management within the framework of both directives. Develop measurements and analysis of hydrologically relevant data and data related to the state of water bodies. Evaluate the effect of urban use on the watershed and analyze the consequences of discharging water (treated or untreated) into receiving water bodies. Additionally, develop strategies to protect areas of surface water and groundwater generation within watersheds, based on the principle of recognizing and enhancing ecosystem services.
C1	COM1 Validate, evaluate, and adapt water legislation for a specific situation. Synthesize the economic variables involved in a problem related to water management. Adapt conceptual frameworks, particularly the Sustainable Development Goals (SDGs), to a specific problem
C2	COM2 Integrate all urban water systems into a comprehensive planning framework for an entire area. Evaluate their performance and optimize them. Compare different types of solutions, including those suitable for scattered settlements and nature-based solutions
C3	COM3 Judge the performance and suitability of various water treatment proposals. Compare different alternatives. Incorporate expert judgment in the planning of water treatment systems, considering emerging challenges and green solutions.
C4	COM4 Integrate the various sources that generate the water supply and the uses that create the demand into systems or balances that allow for proper management. Plan the water resource at both macro and micro scales, allocating water to different uses while integrating environmental and social demands
C6	COM6 Integrate diverse data sources into decision frameworks to facilitate improved management of water resources

Learning outcomes			
Learning outcomes		Study programme competences / results	
Adquirir os coñecementos teórico-prácticos necesarios dominar con soltura os conceptos básicos relacionados cos usos agrícolas e industriais da auga	AJ1 AJ3 AJ5		CJ2 CJ3 CJ4 CJ6
ferramentas necesarias para o estudio e deseño de instalacións de rega	AJ4	BJ1 BJ4	CJ3 CJ4
comprender as características intrínsecas de cada un dos sistemas de rego	AJ2 AJ4	BJ3	CJ3 CJ4
coñecementos sobre outros usos industriais da auga	AJ2 AJ4	BJ1 BJ3 BJ4	CJ1 CJ2 CJ3 CJ4 CJ6

Contents	
Topic	Sub-topic
TEMA 1. Introducción: A auga na agricultura	1.1 Relacións Solo-Auga 1.2 Relacións Auga-Planta
TEMA 2. Demanda de auga nos sistemas de rego	2.1 Introducción 2.2 Evapotranspiración 2.3 Necesidades hídricas dos cultivos 2.4 Calidade da auga de rego 2.5 Programación do rego
TEMA 3. Sistemas de Rego	3.1 Introducción 3.2 Rego por superficie 3.3 Rego por aspersión 3.4 Rego localizado: Goteo. Micoraspersión 3.5 Rego subterráneo. Fertirrigación

TEMA 4. Deseño de Sistemas de Rego	4.1 Canles. Tuberías. Redes 4.2 Bombas. Automatismos. Accesorios 4.3 Proxecto de sistema de rego. Exemplo 4.4 Resolución de caso práctico
TEMA 5. Uso da auga nos Balnearios	5.1 Definición e tipos de balnearios 5.2 Fontes de auga nos balnearios 5.3 Calidade da auga nos balnearios 5.4 Normativa e regulamento
TEMA 6. Uso da auga mineral mineral	6.1 Definición e características da auga mineral 6.2 Diferenzas entre auga mineral natural e outras augas envasadas 6.3 Fontes de auga mineral 6.4 Calidade da auga en plantas de envasado 6.5 Normativas e estándares de calidad
TEMA 7. Uso da auga en acuicultura	7.1 Tipos de Acuicultura 7.2 Requerimientos Hídricos en Acuicultura 7.3 Calidada auga requerida 7.5 Lexislación e Normativas Aplicables

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A1 A2 A3 A4 B1 B3 B4 C1 C2 C3 C4 C6	11	42	53
Field trip	A1 A2 A4 B1 B3 B4 C1 C2 C3 C4	2.5	0	2.5
Supervised projects	A1 A2 A3 A4 A5 B1 B3 B4 C1 C2 C3 C4 C6	2	10	12
Oral presentation	A1 A2 A3 A4 A5 B1 B3 B4 C1 C2 C3 C4 C6	0.5	2	2.5
Personalized attention		5	0	5

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Exposición oral dos temas que constituen os contidos da materia diante do alumnado. Esta exposición irá precedida dunha presentación na que se propoñen algunas preguntas aos estudiantes para motivar a reflexión e o diálogo aberto. A obxectivo final pasa pola transmisión de coñecementos e ao tempo facilitar a súa aprendizaxe, potenciando a participación dos/as estudiantes na construcción significativa do coñecemento.
Field trip	Realizaranse entre 1e 3 visitas a complexos industriais que serán ilustrativas dos usos industriais da auga. As explicacións didácticas correrán a cargo dos encargados do traballo diarios das empresas, con exemplos prácticos.
Supervised projects	Se realizarán 2 trabajos relacionados con la docencia impartida. Los pasos a seguir son: selección del tema, documentación, guión general, sesiones periódicas con el profesorado para el seguimiento, preparación de la presentación y exposición en el aula
Oral presentation	Realizaranse unha exposicións en grupo a toda a clase do traballo tutelado

Personalized attention	
Methodologies	Description

Guest lecture / keynote speech Oral presentation Supervised projects	O alumnado será tutelado individualmente para resolver todas as dúbihdas.
---	---

Assessment				
Methodologies	Competencies / Results	Description	Qualification	
Oral presentation	A1 A2 A3 A4 A5 B1 B3 B4 C1 C2 C3 C4 C6	Presentación na aula do traballos tutelado	25	
Supervised projects	A1 A2 A3 A4 A5 B1 B3 B4 C1 C2 C3 C4 C6	Traballos tutelados sobre: 1) deseño dunha instalacións de rega 2) usos industriais da auga	75	

Assessment comments	
Respecto ao alumnado con recoñecemento de dedicación a tempo parcial e dispensa académica, todos os aspectos relacionados con ?dispensa académica?, ?dedicación ao estudo?, ?permanencia? e ?fraude académica? rexeranse de acordo coa normativa académica da UDC

Other comments	

Segundo se recolle nas distintas normativas de aplicación para a docencia universitaria; deberáse incorporar a perspectiva de xénero nesta materia (usarase linguaxe non sexista, utilizarase bibliografía de autores/as de ambos sexos, propiciarase a intervención en clase; alumnos e alumnas...)

- Traballarase para identificar e modificar prexuízos e actitudes sexistas e influírse na contorna para modificalos e fomentar valores de respecto e igualdade.
- Deberanse detectar situacíons de discriminación por razón e proporanse accións e medidas para corrixilas.
