General description	Matter of basic training of first cour	se, in which they	give the founda	tions of general chemi	stry, inorganic, organic and
	applied to the engineering				

	Study programme competences / results
Code	Study programme competences / results
A4	FB4 Capacidade para comprender e aplicar os principios de coñecementos básicos da química xeral, química orgánica e inorgánica e as
	súas aplicacións na enxeñaría.
B1	CB1 Que os estudantes demostren posuír e comprender coñecementos nunha área de estudo que parte da base da educación
	secundaria xeral e adoita encontrarse a un nivel que, aínda que se apoia en libros de texto avanzados, inclúe tamén algúns aspectos que
	implican coñecementos procedentes da vangarda do seu campo de estudo
B2	CB2 Que os estudantes saiban aplicar os seus coñecementos ao seu traballo ou vocación dunha forma profesional e posúan as
	competencias que adoitan demostrarse por medio da elaboración e defensa de argumentos e a resolución de problemas dentro da súa
	área de estudo
В3	CB3 Que os estudantes teñan a capacidade de reunir e interpretar datos relevantes (normalmente dentro da súa área de estudo) para
	emitiren xuízos que inclúan unha reflexión sobre temas relevantes de índole social, científica ou ética
B4	CB4 Que os estudantes poidan transmitir información, ideas, problemas e solucións a un público tanto especializado como leigo
B5	CB5 Que os estudantes desenvolvan aquelas habilidades de aprendizaxe necesarias para emprenderen estudos posteriores cun alto
	grao de autonomía
B6	B3 Ser capaz de concibir, deseñar ou poñer en práctica e adoptar un proceso substancial de investigación con rigor científico para
	resolver calquera problema formulado, así como de comunicar as súas conclusións ?e os coñecementos e razóns últimas que as
	sustentan? a un público tanto especializados como leigo dun xeito claro e sen ambigüidades
B7	B5 Ser capaz de realizar unha análise crítica, avaliación e síntese de ideas novas e complexas
C1	C3 Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión
	e para a aprendizaxe ao longo da súa vida.
C2	C4 Desenvolverse para o exercicio dunha cidadanía aberta, culta, crítica, comprometida, democrática e solidaria, capaz de analizar a
	realidade, diagnosticar problemas, formular e implantar solucións baseadas no coñecemento e orientadas ao ben común.
C4	C6 Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.
C5	C7 Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.

Learning outcomes	
Learning outcomes	Study programme
	competences /
	results

Capacity to comprise and apply the principles of basic knowledges of the general chemistry, organic and inorganic chemistry		B2	C5
and his applications in the engineering.		В3	
		В6	
		B7	
Handle the basic laws that regulate reactions: kinetic thermodynamics and equilibrium.	A4	B2	
		B5	
		В6	
Solve exercises and problems in a complete and reasoned manner.		B5	
		В6	
		В7	
Properly apply theoretical concepts in the laboratory through correct and safe use.		B1	C2
		В3	C4
		В7	
Use rigorous language in chemistry. Present and interpret data and results		B4	C1
		В7	C2
			C4
			C5

	Contents		
Topic	Sub-topic		
The following lessons develop the established contents in the	I Structure of the matter. Energy and kinetical of the chemical reactions		
Verification Memory, that are:	II Chemical equilibrium: types and applications		
	III Applications of the electrochemistry. Principles of instrumental analysis		
	IV Bases of the industrial chemistry. Balances of matter		
	V Organic and inorganic chemistry applied to the engineering		
Lesson 1 Basic concepts of General Chemistry:	Fundamental Principles of Chemistry. The atom: quantum mechanical description.		
	Periodic table and periodic properties. Chemical link: types of link.		
Lesson 2 Thermochemistry:	Introduction: first principle of thermodynamics. Heats of reaction, enthalpy.		
	Thermochemistry: Law of Hess. Calorimetry. Second principle of thermodynamics:		
	entropy. Third principle of thermodynamics: spontaneity of the reaction.		
Lesson 3 Chemical Kinetics:	The rate of reaction. The rate law. Determination of the rate of reaction. Order of		
	reaction. The collisions and of the state of transition theories. Activation energy.		
	Reaction mechanisms. Catalysis: Catalysts.		
Lesson 4 Chemical equilibrium in gaseous phase:			
	Nature of the chemical equilibrium. The equilibrium constant: applications.		
	Heterogeneous equilibria. Factors that affect chemical equilibrium: Le Châtelier?s		
	principle. Relation between equilibrium constants. Effect of changes in the		
	temperature on the equilibrium constant.		
Lesson 5 Acid-base equilibria:	Acid-base definitions. Autoionization of water. Concept of pH: determination.		
	Dissociation of acids and bases. Acid-base properties of the salts. Acid-base		
	reactions. Buffer solutions. Acid-basic titrations: indicators.		
Lesson 6 Oxidation-reduction (redox) equilibria:	Methods of balancing redox equations. Electrochemical foundations: galvanic cells.		
	Free energy and voltage of the battery. The Nernst equation. Redox titrations.		
Lesson 7 Applications of the electrochemistry:	Primary commercial cells and accumulators. Fuel cells. Electrolytic cells. Industrial		
	applications of the electrolysis: electrodeposition. Metallic corrosion.		
Lesson 8 Principles of Instrumental Analysis:	Analytical Chemistry: concept and division. Classification of quantitative analytical		
	methods. Instrumental analytical methods: classification. Parameters of validation of		
	an analytical method. Evaluation of results.		

Lesson 9 Principles of Organic Chemistry:	Functional groups. Homologous series. Isomery. Determination of molecular structures.
Lesson 10 Saturated, unsaturated and aromatic	Classification. Saturated hydrocarbons: naming, sources, synthesis and properties.
hydrocarbons:	Alkenes and alkynes: structure, nomenclature, synthesis and properties. Aromatic
	compounds: structure, nomenclature, obtaining and properties. Benzene.
Lesson 11 Other organic compounds:	Compounds of functional groups with simple link: alkyl halides, alcohols, phenols,
	ethers and amines. Compounds of functional groups with multiple links: carbonyl
	group compounds, carboxylic acids and his derivatives.
Lesson 12 Bases of the Industrial Chemistry. Balances of	Introducción a los balances de materia. Procesos sin reacción química.
matter:	
Lesson 13 Organic Chemistry applied to the engineering:	Oil. Natural gas. Biomass. Natural and synthetic polymers.
Lesson 14 Inorganic Chemistry applied to the engineering:	Metallurgy. Semiconductors. Materials of construction. Industrial synthesis of an
	inorganic compound (industry of the chloride of sodium).

	Plannir	ng		
Methodologies / tests	Competencies /	Teaching hours	Student?s personal	Total hours

Guest lecture / keynote speech	A4 C4	30	39	69
Problem solving	A4 B2 B4 B5	18	18	36
Supervised projects	A4 B6 B7 C1	2	16	18
Personalized attention		2	0	2

	Methodologies
Methodologies	Description
Laboratory practice	Understanding reading of the practice. Realise the experimental work. Pose and resolve the numerical calculations associated
	as well as the questions that pose. Examine and value the results. Draft and present the final report of the practices.
Mixed	Tests written used for the evaluation of the learning of the student.
objective/subjective	
test	
Guest lecture /	Has a expositive function complemented with the use of audiovisual means and the introduction of some questions headed to
keynote speech	the students, with the purpose of transmit knowledges and facilitate the learning. The student takes aim, poses doubts and
	questions.
Problem solving	Presentation and resolution of bulletins of exercises. The student, of individual form or in reduced group, poses doubts and /or
	questions, participating of active form in the classroom.
Supervised projects	It involves the realization of directed studies that each group must expose in the classroom and deliver to the teacher for his
	correction.
	correction.

	Personalized attention
Methodologies	Description

Laboratory practice Supervised projects Problem solving

In the personalized attention will treat to amend possible deficiencies in the previous chemical training of the student and to resolve doubts and punctual questions that, usually, prevent him the general follow-up of the matter.

It will realize a follow-up of the work of the student in the laboratory, will take in consideration his suggestions and will loan him help to clear the doubts.

In the problem solving and seminar sessions in small group will loan them help to clear concepts and resolve possible doubts.

In the preparation of the supervised projects will facilitate them the assistance that require for his preparation and exhibition.

The student with recognition of part-time dedication and academic dispensation of attendance exemption will be attended in tutoring hours (by appointment).

		Assessment	
Methodologies Competencies /		Description	
	Results		
Laboratory practice	A4 B3 C2 C5		10
		Completion, active participation in the internship, delivery of the report. Ability to work	
		collaboratively.	
Supervised projects	A4 B6 B7 C1	realization and exposition in the classroom of two directed activities, one in the	10
		Inorganic Chemistry part and the other in the Organic Chemistry part.	
Problem solving	A4 B2 B4 B5		10
		Resolution of exercise reports, questionnaires and ability to explain them in the	
		classroom.	
Mixed	A4 B1 B2 B5	In the middle of the term there will be an eliminatory partial exam of the subject taught	70
objective/subjective		up to that moment (theory and problems). At the end of the four-month period, a	
test		second partial exam will be held to eliminate the rest of the subject that has not been	
		included in the first partial exam (theory and problems). Students who have not	
		passed the partial exam(s) will be able to be examined in the global exam of January	
		of first opportunity (theory and problems).	

Assessment comments

In order to be evaluated, students must have completed at least 75% of the practical laboratory classes.

The evaluation of the subject will have two independent parts, Organic Chemistry (QO) (from topic 9 to topic 14) and Inorganic Chemistry (QI) (from topic 1 to topic 8), each part will have a maximum score of 5 points, the score of the subject will be the sum of the QO qualification and QI qualification, to pass the subject it will be necessary to pass each part (2.5 points). The approval of each part will be kept in successive calls. In the QO part, to add the score of the QO activities it is necessary to reach a minimum of 1.25 points in the QO exam. In the QI part, to add the score of the QI activities it is necessary to reach a minimum of 1.25 points in the QI exam.

For the evaluation of the second opportunity, the same continuous evaluation activities can be carried out as during the course, except for the laboratory practices, and in their place, questionnaires via Moodle and/or exams can be taken.

Advance call (December): It will be evaluated in the same way as the rest of the calls (January and July).

ΑII

aspects related to "academic dispensation", "dedication to study", "permanence" and "academic fraud" will be

governed according to the current academic regulations of the UDC.

Other comments

Given

that it is a subject that is taught in the first quarter of the first year of the degree, it is essential that the student handle concepts and basic knowledge of Mathematics, Physics and Chemistry in high school with ease. Before taking the subject, it is considered very important to know the chemical nomenclature (that is, to name and formulate the most common chemical elements, inorganic and organic compounds).It is recommended, especially for students who have not taken the subject of Chemistry in the Baccalaureate, to attend the course "0" that is taught in the month of September. To help achieve a sustained immediate environment and meet the objective of action number 5: "Healthy and sustainable environmental and social teaching and research" of the "Green Campus Ferrol Action Plan": 1.- The delivery of documentary works that are carried out in this matter: 1.1. It will be requested in virtual format and/or computer support. 1.2. It will be done through Moodle, in digital format without the need to print them. 1.3. In case of being done on paper: -Plastics will not be used. - Double-sided prints will be made. - Recycled paper will be used. - The printing of drafts will be avoided. 2.- There must be a sustainable use of resources and the prevention of negative impacts on the natural environment.An attempt will be made to convey to students the importance of ethical principles related to the values ??of sustainability so that they apply them not only in the classroom but also in personal and professional behavior. The

The full integration of students who, for physical, psychological or sociocultural reasons, experience difficulties in adequate, equal and beneficial access to university life, will be facilitated.

gender perspective must be incorporated in this matter, so the work delivered by the students and the material prepared must use non-sexist language.
